Description

The SE5023L is a 5 GHz power amplifier offering high linear power for wireless LAN applications.

The SE5023L offers a high level of integration for a simplified design, providing quicker time to market and higher application board production yield. The device integrates all matching elements, a temperature compensated, load insensitive power detector with 15 dB of dynamic range and a 3.8 GHz notch filter.

For wireless LAN applications, the device meets the requirements of IEEE 802.11ac and 802.11n, and delivers approximately +24 dBm of 802.11ac output power or +26 dBm of 802.11n output power at 5 V.

A 2.85 V reference voltage on VREF is all that is required to enable or disable the power amplifier.

A block diagram of the SE5023L is shown in Figure 1. The device pinout for the 20-pin QFN are shown in Figure 2. Signal pin assignments and functional pin descriptions are described in Table 1.

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Note: RFIN and RFOUT include DC shunt to Ground.
External blocking capacitors are recommended.

Note 1: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Package Dimensions

The PCB layout footprint for the SE5023L is provided in Figure 4. Typical part markings are shown in Figure 5. Package dimensions for the 20-pin QFN are shown in Figure 6, and carrier tape dimensions are provided in Figure 7.

Package Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur

when the part is subjected to high temperature during solder assembly.

The SE5023L is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. All dimensions are in millimeters.
2. Interpret dimensioning and tolerancing per ASME Y14.5M-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations: 0.025 mm Cu via wall plating (minimum). Via holes to be filled with conductive paste and plated over.
5. Stencil recommendations: 0.125 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners will offer better paste release.
6. Solder mask recommendations: contact board fabricator for recommended solder mask offset and tolerance.
