Amphenol®
FIBER OPTIC PRODUCTS
60 Years of Interconnect Knowledge

Connectors & Adapters

Experience. With 60 years of interconnect experience, from the first industry standard 905 Series SMA to the advanced LX.5 small form-factor connector system and high density MPO multi-fiber interconnects, Amphenol leads innovation in fiber optic connector technology.

Product Breadth. Amphenol offers a complete line of fiber optic connectors and adapters including SMA, ST, FC, SC, LC, LX.5, MPO and Hybrilink™ converting adapters.

Total Quality Performance. Stringent quality assurance systems exceed the ISO 9001 requirements and ensure consistent quality products regardless of manufacturing location. Total quality means understanding who the customer is, what the requirements are and meeting those requirements without error, on time, every time.

Highest Quality Materials. Top grade ceramic ferrules ensure the best optical performance and polishing yield. Carefully selected engineering plastics withstand the most demanding environmental stress conditions. High quality materials ensure the long-term reliability and performance of Amphenol connectors.

Performance and Reliability. Amphenol's experience in military and aerospace interconnect dictates 100% field reliability. Collaborative design review processes for new product development and a state of the art in-house environmental testing lab certify each Amphenol design and production process.

Creative and Functional Designs. You specify the functionality of the interconnect and our talented, enthusiastic and friendly mechanical and optical engineers work together to develop your solution. Design creativity and a deep understanding of mechanics, optics, and your unique application ensure a functional and manufacturable design.

Responsiveness and Speed to Market. Vertical and virtual integration (supplier partnerships) of key manufacturing processes allow for customer specific production connector parts in less than four weeks: Stamping, Die Cast, Turning, Plastic and Metal Injection Molding, Plating, Reel to Reel Etching, Photolithographic and Laser Micro-Machining.

Manufacturing Expertise and Delivery Precision. Amphenol Delivers. Meticulous attention to capacity and material planning allow Amphenol to meet our committed ship dates on time, every time. Amphenol knows volume manufacturing. Rapid ramp-up of challenging new products is one of our strengths.

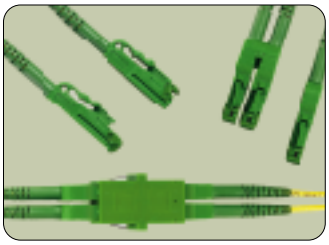

Experience Across Industries. From aerospace to oil exploration, from the Internet to medical devices, Amphenol is a preferred supplier to leading customers across many industries.

Global Presence. With 40 manufacturing facilities on 3 continents, and a local presence in over 30 countries, our responsive and creative team can solve your interconnect challenge anywhere in the world.

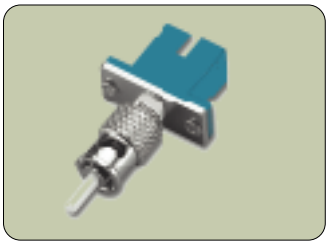

Amphenol Interconnect Innovation Delivered Worldwide On-time.

LX.5® Connectors & Adapters

Amphenol's LX.5 connectors offer double the density of standard SC connectors in a feature-rich, mechanically robust design.

The connector interface features an integrated shutter system that protects the fiber endface from damage and contamination during handling and installation. It is automatically actuated when mating to an LX.5 adapter, requiring no manual operation by the end user. Using high precision and time tested zirconia ferrules, performance and reliability are guaranteed.

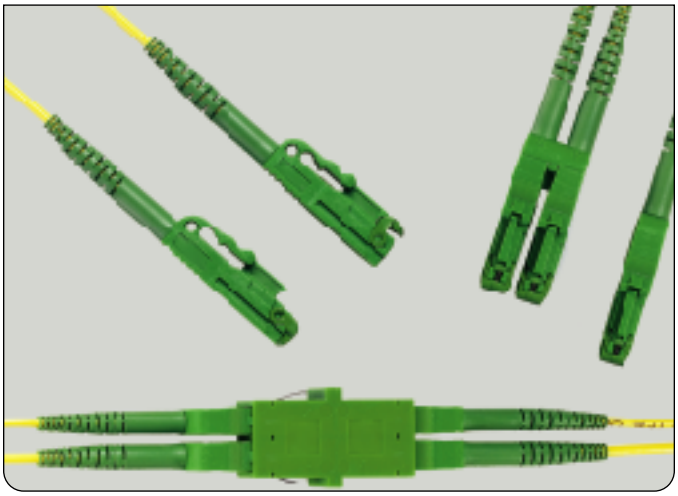

The low-profile latching system, with a wide landing area for depressing the latch, allows for smooth mating and de-mating of the connector. With virtually no protrusion from the connector body, the low-profile LX.5 latch prevents tangling of the fiber cables and maintains a rugged connection without sacrificing critical space requirements in today's dense optical packaging.

Amphenol's current connector styles include APC, tunable singlemode UPC and multimode versions for use with 2.0mm, 1.70mm or 900µm cable. It is possible to make a duplex connector or retrofit a simplex cable assembly by simply inserting an inexpensive duplex clip between two simplex connectors. This assists in managing connector inventory by reducing the number of connector part numbers needed as requirements change.

Intermateability:

EIA/TIA FOCIS 13 pending approval.

LX.5 Connectors & Adapters

Common Specifications

Insertion Loss (typical):

Singlemode (untuned): ≤ UPC 0.10dB

≤ APC 0.20dB

Multimode: ≤ 0.20dB

Material:

Ferrule: zirconia

Alignment Sleeve: zirconia or phosphor bronze (adapters)

Connector / Adapter Bodies:

UL 94V-0 rated thermoplastic to meet industry standard flammability ratings.

Environmental:

Operating Temperature: -40 to +75º C

Storage Temperature: -40 to +85º C

*Meets Telcordia GR-326-CORE, Issue 3

Mating Durability:

200 optical mating and 500 mechanical tests per Telcordia GR-326-CORE, Issue 3

Recommended Cables:

1.70mm, 2.0mm, or 900µm

Hybrilink™ Adapter: Plug Style Singlemode and Multimode

Solve interoperability problems by using Amphenol Fiber Optic Products Hybrilink™ adapters in situations requiring the coupling of dissimilar connector styles or when using existing cable assemblies with new equipment or new cables with existing equipment.

These compact, male-to-female configured adapters economically adapt connector interfaces to new equipment, upgrade distribution panels, and eliminate the need to re-terminate cable assemblies.

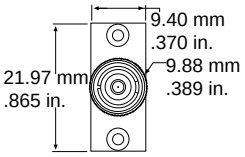

Hybrilinks™ are optically tested and available in singlemode (9/125µm) and multimode (50/125 and 62.5/125µm) versions, in most interface designs.

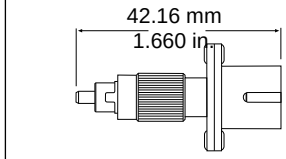

Features

- Low insertion loss
- Repeatability
- Thermal stability
- Low return loss

Hybrilink™ Adapter: Bulkhead Style

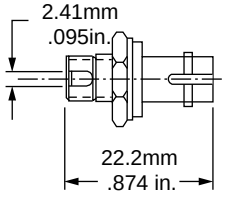

For a practical and efficient interconnect method of joining dissimilar connectors, turn to Hybrilink™ bulkhead adapters from Amphenol Fiber Optic Products.

Available flanged or non-flanged, these compact adapters feature a wide variety of female-to-female interfaces that form a single piece of easy-to-install interconnect hardware. The Hybrilink™ bulkhead adapters are perfect for testing applications and an efficient solution to the problem of mismatched connections in the field.

MPO Adapters

The MT ferrule has changed fiber optic packaging dramatically with the increase in density up to 24 fibers in a single connector. With this density increase, performance cannot afford to be compromised.

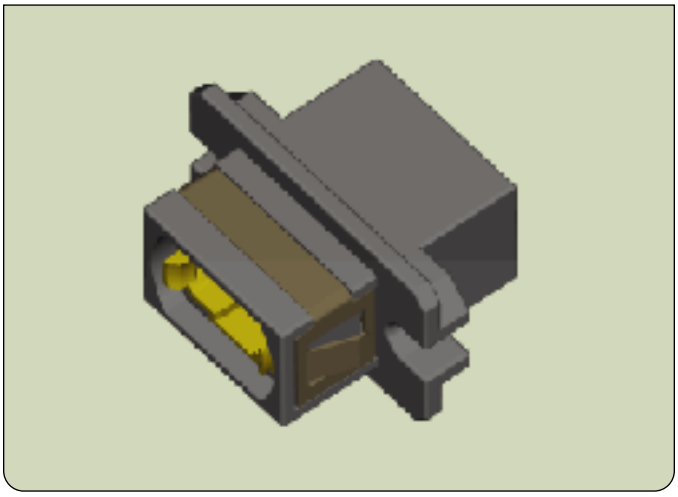

That is why Amphenol developed the 955 series MPO adapter family. Made in both die-cast and industry compliant thermoplastics, the MPO adapter is precision manufactured to insure intermateability with industry standard assemblies and connectors. Available with various flange styles, Amphenol MPO adapters are able to meet the challenges and mechanical requirements of highly dense system designs while maintaining industry standard footprints.

The die-cast version was designed to meet the growing need for connectors to assist in preventing excessive EMI leaks from front panels in telecommunication and data communication equipment. As these devices become faster and more dense, this type of protection becomes more important for overall system performance. The 360-degree outside flange completely covers the panel cutout to insure minimal leaks inherent to front panel designs. Amphenol's MPO die-cast adapter is constructed with a one-piece body featuring a solid backwall with a "window" to allow the mating of the MT ferrules. This minimizes the aperture of the adapter for additional EMI protection.

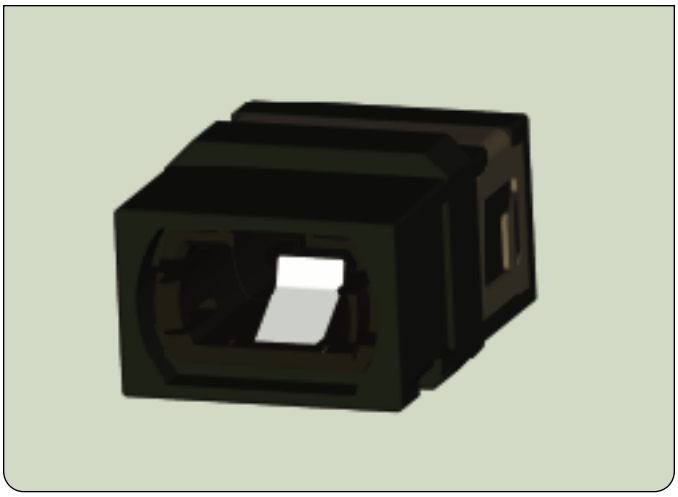

An optional innovative feature of Amphenol MPO adapters is the fully automatic shutter. This internal shutter mechanism, located on both sides of the adapter, requires no manual actuation to receive the benefit of eye safety by simply inserting the MPO connector. The unique stepped design of the shutter prevents the ferrule endface from making contact with the shutter while mating the connector.

The flexible and practical design features, coupled with Amphenol's MPO cable assemblies, provide the perfect multi-fiber interconnect solution.

® MTP is a registered trademark of US Conec

MPO Die-cast Adapter

MPO Plastic Adapter

Features

- Available in multiple flange styles to meet various panel design requirements.
- Optional, internal, fully automatic shutter mechanisms on both sides of the adapter to assist in eye safety requirements.
- Shutter requires no manual actuation.
- Flange on die-cast version completely covers panel cutout.
- Meets IEC 1754-7 and TIA/EIA FOCIS 5 standards.
- Accepts industry standard MPO/MTP® interfaces.

SC Shuttered Adapter

With fiber optics reaching closer to the consumer and the increasingly high-powered active devices being used in today's networking and telecommunication platforms, eye safety is an absolute necessity. Amphenol's SC Shuttered Adapter family has been designed to meet this growing need.

Our new internal shutter solutions for Amphenol's SC adapter designs provide a cost-effective means of blocking stray light. This is accomplished by an integrated, retractable shutter inside the adapter body, which is only actuated by insertion of the SC connector into the adapter. Contact with the ferrule endface and fiber core is avoided due to the stepped design of the shutter, preventing endface damage. A step above other external shutter solutions, Amphenol's design is fully automatic requiring no manual intervention.

SC Simplex Shuttered Adapter

Features

- Eliminates stray laser light during mating and de-mating of the SC connectors to assist in eye safety.
- 100% automatic shutter operation requiring no operator handling of shutter door.
- Simplex and duplex designs (duplex design pending).
- Accommodates industry standard (JIS) panel layouts.
- Plastic meets UL 94V-0 flammability requirements.
- Available with zirconia or phosphor bronze alignment sleeves.
- Screw mount or small flange options available.

SC Connectors & Adapters

Amphenol's 954 series fiber optic SC connectors utilize a push-pull retention feature enabling easy insertion and removal, making it ideally suited for high density. The SC connector features an internal cavity that virtually eliminates the possibility of improper epoxy application, thus providing higher manufacturing yields.

Amphenol's SC connectors are exceptionally suited for factory and field installation. Every aspect of the connector system is precision manufactured to produce reliable and consistent performance. The SC is also designed to meet industry specifications for building wiring, EIA/TIA-568A.

SC Connector & Adapter Family

Features

- Unique design automatically gauges correct epoxy dosage, improving yields and reliability.
- One-piece construction reduces termination time.
- Non-optical disconnect feature design prevents signal interruption.
- The highly concentric precision zirconia ferrules are pre-radiused to minimize insertion loss and back reflection.
- Available in singlemode, APC and multimode versions.
- Available for 3.0mm and 2.0mm cable with 900um bare fiber boots included.
- Excellent for factory or field terminations.
- Duplex version utilizes a flexible coupling sleeve, providing float between channels A and B.
- Teflon tube in the rear of the connector insures clean epoxy injection.

Common Specifications

Insertion Loss:	≤ 0.15dB typical, singlemode, UPC		
	≤ 0.3dB typical, APC		
	≤ 0.35dB typical, multimode		
Return Loss:	super	(SPC)	≤ -45dB*
	ultra	(UPC)	≤ -55dB*
	angle	(APC)	≤ -65dB*
Durability:	< 0.2dB change, 500 mating cycles		
Temperature:	< 0.3dB change, -40 to +85ºC		

Intermateability:

The Amphenol 954 series SC connectors and adapters are mechanically and optically intermateable with NTT SC type products and conform to JIS C 5973. SC duplex connectors and adapters conform to ANSI VX3T9.3 SC specifications and are intermateable.

* Performance is polish dependent.

FC Connectors and Adapters

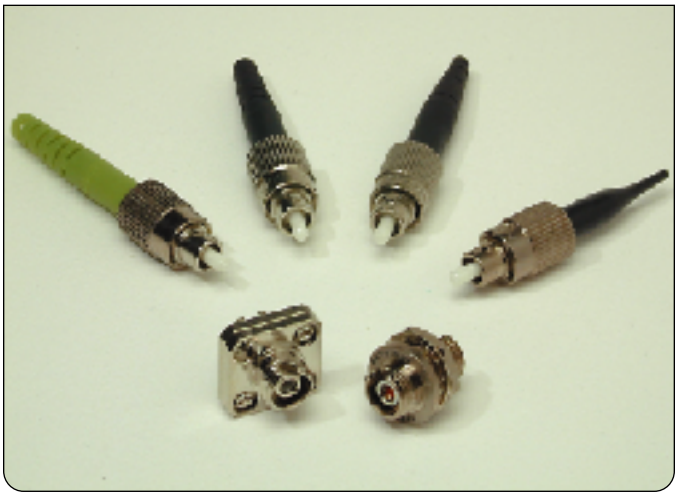

Amphenol's 944 series fiber optic FC connectors effectively terminate optical fiber in a variety of network applications. The connectors are secured using a threaded coupling nut, providing a significant increase in pull-out performance. The FC connectors also feature an internal cavity that virtually eliminates the possibility of improper epoxy application, thus providing higher manufacturing yields.

Amphenol's FC connectors are exceptionally suited for factory and field installation. Every aspect of the connector system is precision manufactured to produce reliable and consistent performance. The 944 series is available in tunable or non-tunable PC versions for flexibility in specific performance requirements.

The FC/APC versions are also tunable as a standard product to provide the maximum performance in singlemode applications. The FC/APC connector system features a tight-fit keyway that prohibits the possible mis-mating between FC/PC and FC/APC connectors.

Features

- Unique design automatically gauges correct epoxy dosage, improving yields and reliability.
- One-piece construction reduces termination time.
- Available in singlemode tunable PC and standard APC tunable versions.
- Non-optical disconnect design prevents transmission interruption.
- High precision zirconia ferrules minimize insertion loss and return loss values.
- Available in singlemode and multimode versions.
- Adapters are available with high precision zirconia or phosphor bronze alignment sleeves.

FC Connector & Adapter Family

Common Specifications

Insertion Loss:	≤ 0.15dB typical, singlemode, UPC		
	≤ 0.3dB typical, APC		
	≤ 0.35dB typical, multimode		
Return Loss:	super	(SPC)	≤ -45dB*
	ultra	(UPC)	≤ -55dB*
	angle	(APC)	≤ -65dB*
Durability:	< 0.2dB change, 500 mating cycles		
Temperature:	< 0.3dB change, -40 to +85ºC		

Intermateability:

The Amphenol 944 series FC connectors and adapters are mechanically and optically intermateable with NTT FC type products and conform to JIS C 5970.

* Performance is polish dependent.

LC Connectors & Adapters

Amphenol's 956 series fiber optic LC connectors utilize the familiar RJ-45 style latching mechanism. As a small form factor (SFF) connector, the LC connector is almost half the size of the popular SC connector. With accelerated growth demanding greater bandwidth in less physical space, LC connectors have emerged as a viable solution for high density frames and patch panels.

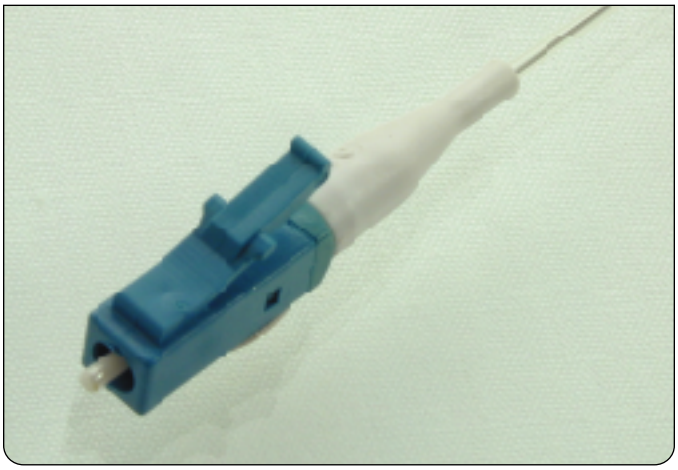

Amphenol's LC connectors have many of the traditional performance advantages of standard connectors, but with a smaller package.

LC Connector & Adapter Family

Features

- Time-tested zirconia ferrule (1.25mm).
- Increased density compared to standard connectors.
- Standard simplex and duplex styles.
- Color coding (singlemode: blue, multimode: beige) per TIA 568.A.
- Familiar RJ-45 latching style.
- Exceptional for factory termination.

Common Specifications

Insertion Loss:	≤ 0.15dB typical, singlemode, UPC		
(untuned)	≤ 0.25dB typical, multimode		
Return Loss:	super	(SPC)	≤ -45dB*
	ultra	(UPC)	≤ -55dB*
Durability:	< 0.2dB change, 500 mating cycles		
Temperature:	< 0.3dB change, -40 to +85ºC		

Intermateability:

The Amphenol 956 series LC connector is Telcordia, EIA, IEC compliant. Polarized per TIA 568-A, color coded per TIA-568-A, and intermateable with industry standard LC connectors and adapters.

* Performance is polish dependent.

ST Connectors and Adapters

Amphenol's 953 series fiber optic ST and ST II connectors utilize a bayonet style mating concept to provide a secure, robust coupling mechanism. The enclosed spiral slotted coupling nut allows easy insertion in densely packed patch panels. The ST connector has been used extensively in telecom, data and premise installation applications and could easily be considered a de facto standard. The ST's mass installation base will maintain its prominence for years to come.

Amphenol's ST compatible connectors are exceptionally suited for factory and field installations. Special attention has been given to every ST performance parameter, increasing product repeatability and exceeding industry standards. All ST products are compatible with the AT&T, ST and ST II product series.

ST Connector & Adapter Family

Features

- The ST connector body and coupling nut are precision molded with a flame retardant, glass-filled polymer for a durable and light weight product.
- The ST II connector body and coupling nut are precision zinc die-cast and nickel plated for superior strength and corrosion resistance.
- Available with highly concentric precision zirconia ferrules pre-radiused to minimize insertion loss and back reflection.
- The connectors utilize a crimp-on cable retention system for ease of termination and superior load carrying ability.
- Adapters are available with zirconia or phosphor bronze alignment sleeves.

Common Specifications

Insertion Loss:	≤ 0.15dB typical, singlemode, UPC		
	≤ 0.35dB typical, multimode		
Return Loss:	super	(SPC)	≤ -45dB*
	ultra	(UPC)	≤ -55dB*
Durability:	< 0.2dB change, 500 mating cycles		
Temperature:	< 0.3dB change, -40 to +85ºC		

Intermateability:

The Amphenol 953 series ST connectors and adapters are optically and mechanically compatible with AT&T / Lucent Technologies ST and ST II connectors and their functional equivalents.

* Performance is polish dependent.

SMA Connectors, Adapters & Receptacles

Amphenol Fiber Optics was a pioneer in developing the first industry standard fiber optic interconnect system by introducing the SMA connector. The 905 and 906 series were the first fiber optic interconnect system to gain industry wide acceptance for military, industrial, data communications and medical applications. Today, Amphenol Fiber Optics continues to support these markets with a wide variety of products that meet the continuing need for the family of SMA's.

The SMA connector family utilizes a threaded coupling nut system for mating and de-mating. Available with zirconia or stainless steel ferrules with custom hole sizes, the SMA is an excellent choice for a robust, low-cost and reliable system.

Amphenol's long standing history and development of the SMA product insures exceptional quality and long term reliability. We continue to support further development and improvement with our standard and custom product offering.

SMA Connectors

Features

- Reliable, robust and time-tested as one of the first industry standard fiber optic interfaces.
- Threaded, metal coupling nut for maximum retention.
- Stainless steel ferrules available in custom, precision drilled fiber holes for specialized applications.
- Available with hexagonal coupling nut upon request.

Common Specifications

Insertion Loss: 128µm & 144µm SMArt ferrule (zirconia, 905 series):
≤ 0.8dB typical

128µm & 144µm stainless steel ferrule:
≤ 2.0dB typical

Tolerances for custom, micro-drilled holes for stainless steel ferrules:

Fiber Hole Size	Tolerance
128 & 144µm	+5/-0µm
145 to 200µm	+10/-0µm
201 to 500µm	+5%/-0µm
500µm and higher	+25/-0µm
