SLG46722

GreenPAK 3
Programmable Mixed Signal Array

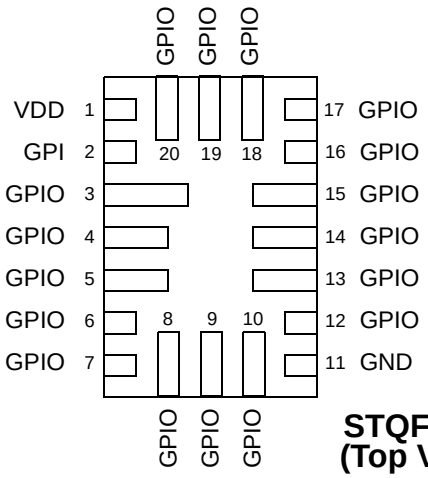
Features

- Logic & Mixed Signal Circuits
- Highly Versatile Macro Cells
- Read Back Protection (Read Lock)
- 1.8V (±5%) to 5V (±10%) Supply
- Operating Temperature Range: -40°C to 85°C
- RoHS Compliant / Halogen-Free
- 20-pin STQFN: 2 x 3 x 0.55 mm, 0.4 mm pitch

Applications

- Personal Computers and Servers
- PC Peripherals
- Consumer Electronics
- Data Communications Equipment
- Handheld and Portable Electronics

Pin Configuration



STQFN-20

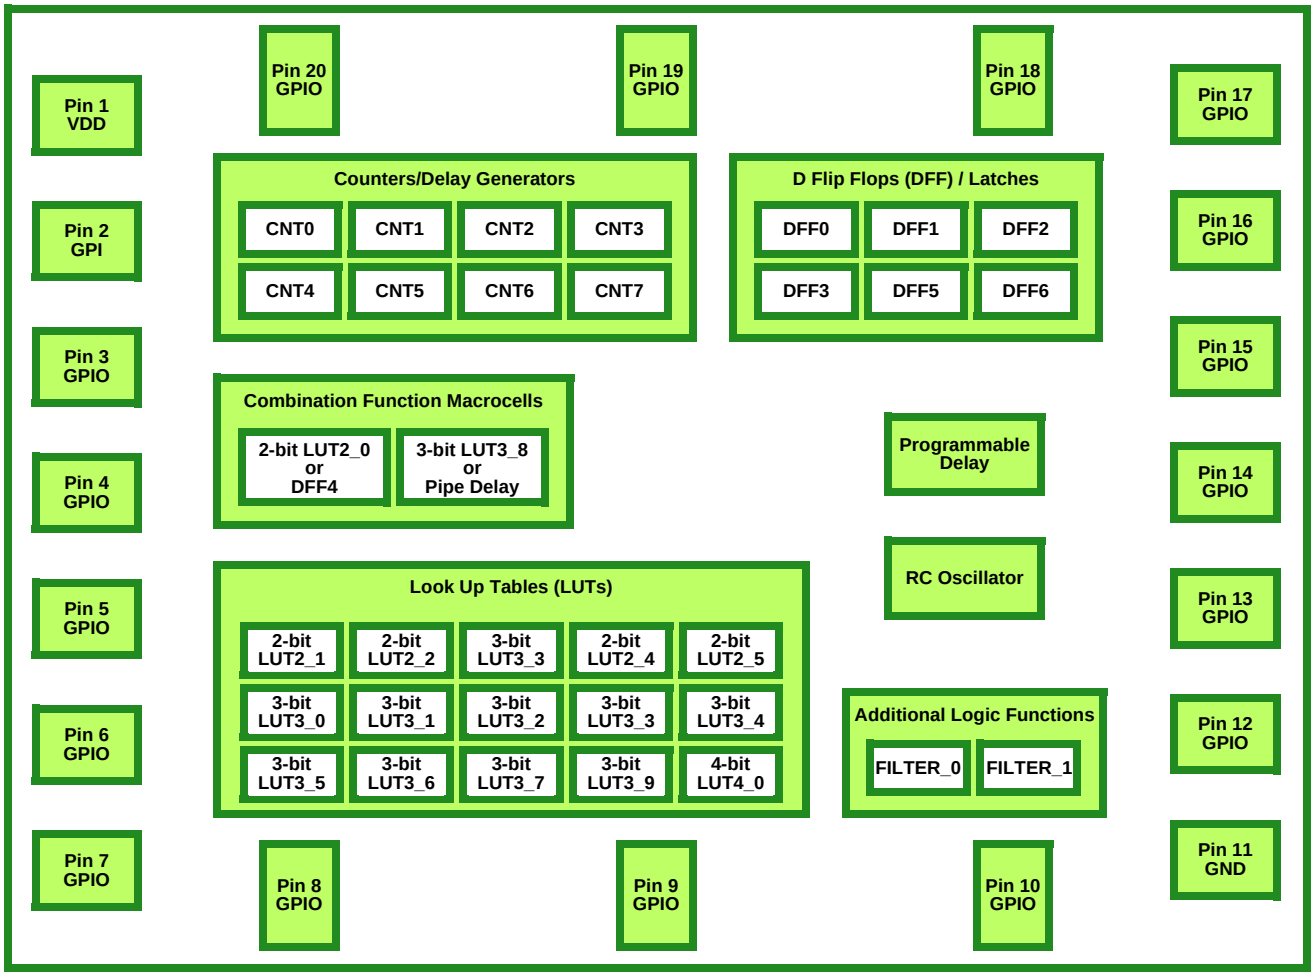
Block Diagram



1.0 Overview

The SLG46722 provides a small, low power component for commonly used mixed-signal functions. The user creates their circuit design by programming the one time Non-Volatile Memory (NVM) to configure the interconnect logic, the I/O Pins and the macro cells of the SLG46722. This highly versatile device allows a wide variety of mixed-signal functions to be designed within a very small, low power single integrated circuit. The macro cells in the device include the following:

- Fifteen Combinatorial Look Up Tables (LUTs)
  - Five 2-bit LUTs
  - Nine 3-bit LUTs
  - One 4-bit LUT
- Two Combination Function Macro cell
  - One Selectable FF/Latch or 2-bit LUT
  - One Selectable Pipe Delay or 3-bit LUT
    - Pipe Delay – 16 stage / 3 output
- Eight Counter / Delay Generators (CNT/DLY)
  - One 14-bit delay/counter
  - One 14-bit delay/counter with external clock/reset
  - Four 8-bit delays/counters
  - Two 8-bit delays/counters with external clock/reset
- Six D Flip-Flop / Latches (DFF)
- Pipe Delay – 16 stage/3 output (Part of Combination Function Macrocell)
- Programmable Delay
- Additional Logic Functions – 2 Deglitch Filters
- RC Oscillator (RC OSC)

2.0 Pin Description

2.1 Functional and Programming Pin Description

Pin #	Pin Name	Function	Programming Function
1	VDD	Power Supply	Power Supply
2	GPI	General Purpose Input	V_{PP} (Programming Voltage)
3	GPIO	General Purpose I/O	Reset
4	GPIO	General Purpose I/O	N/A
5	GPIO	General Purpose I/O	N/A
6	GPIO	General Purpose I/O	N/A
7	GPIO	General Purpose I/O	N/A
8	GPIO	General Purpose I/O or POR Output	N/A
9	GPIO	General Purpose I/O	N/A
10	GPIO	General Purpose I/O	N/A
11	GND	Ground	Ground
12	GPIO	General Purpose I/O	N/A
13	GPIO	General Purpose I/O	N/A
14	GPIO	General Purpose I/O	N/A
15	GPIO	General Purpose I/O	N/A
16	GPIO	General Purpose I/O	Programming Mode Control
17	GPIO	General Purpose I/O	Programming ID Pin
18	GPIO	General Purpose I/O	Programming SDIO Pin
19	GPIO	General Purpose I/O	Programming SRDWB Pin
20	GPIO	General Purpose I/O or External Clock	Programming SCL Pin

3.0 User Programmability

The SLG46722 is a user programmable device with One-Time-Programmable (OTP) memory elements that are able to construct combinatorial logic elements. Three of the I/O Pins provide a connection for the bit patterns into the OTP on board memory. A programming development kit allows the user the ability to create initial devices. Once the design is finalized, the programming code (.gpx file) is forwarded to Silego to integrate into a production process.

		Logic Input with Schmitt Trigger	--	--	1.510	V
		Low-Level Logic Input	--	--	0.780	V
I_{IH}	HIGH-Level Input Current	Logic Input Pins; V_{IN} = 5 V	-1.0	--	1.0	µA
I_{IL}	LOW-Level Input Current	Logic Input Pins; V_{IN} = 0 V	-1.0	--	1.0	µA
V_{OH}	HIGH-Level Output Voltage	Push-Pull, I_{OH} = 5 mA, 1X Driver	4.19	4.78	--	V
		PMOS OD, I_{OH} = 5 mA, 1X Driver	4.19	4.78	--	V
		Push-Pull, I_{OH} = 5 mA, 2X Driver	4.32	4.89	--	V
		PMOS OD, I_{OH} = 5 mA, 2X Driver	4.32	4.89	--	V
V_{OL}	LOW-Level Output Voltage	Push-Pull, I_{OL}= 5 mA, 1X Driver	--	0.157	0.270	V
		Push-Pull, I_{OL} = 5 mA, 2X Driver	--	0.076	0.130	V
		Open Drain, I_{OL} = 5 mA, 1X Driver	--	0.102	0.180	V
		Open Drain, I_{OL} = 5 mA, 2X Driver	--	0.051	0.110	V
I_{OH}	HIGH-Level Output Current	Push-Pull, V_{OH} = 2.4 V, 1X Driver	22.08	34.04	--	mA
		PMOS OD, V_{OH} = 2.4 V, 1X Driver	22.08	34.04	--	mA
		Push-Pull, V_{OH} = 2.4 V, 2X Driver	41.76	68.08	--	mA
		PMOS OD, V_{OH} = 2.4 V, 2X Driver	41.69	68.08	--	mA
I_{OL}	LOW-Level Output Current	Push-Pull, V_{OL} = 0.4 V, 1X Driver	7.215	11.580	--	mA
		Push-Pull, V_{OL} = 0.4 V, 2X Driver	13.831	23.160	--	mA
		Open Drain, V_{OL} = 0.4 V, 1X Driver	10.820	17.380	--	mA
		Open Drain, V_{OL} = 0.4 V, 2X Driver	17.343	34.760	--	mA
		Open Drain, V_{OL} = 0.4 V, Super Drive	30.964	69.520	--	mA
T_{SU}	Startup Time		--	1	--	ms

6.0 Summary of Macro Cell Function

6.1 I/O Pins

- Digital Input (low voltage or normal voltage, with or without Schmitt Trigger)
- Open Drain Outputs
- Push Pull Outputs
- 10 kΩ/100 kΩ/1 MΩ pull-up/pull-down resistors
- 40mA Open Drain Superdrive output

6.2 Connection Matrix

- Digital matrix for circuit connections based on user design

6.3 Combinational Logic Look Up Tables (LUTs – 15 total)

- Five 2-bit Lookup Tables
- Nine 3-bit Lookup Tables
- One 4-bit Lookup Tables

6.4 Combination Function Macrocell (2 total)

- One Selectable FF/Latch or 2-bit LUT
- One Selectable Pipe Delay or 3-bit LUT

6.5 Delays/Counters (8 total)

- One 14-bit delay/counter: Range 1-16384 clock cycles
- One 14-bit delay/counter with external clock/reset: Range 1-16384 clock cycles
- Four 8-bit delays/counters: Range 1-255 clock cycles
- Two 8-bit delays/counters with external clock/reset: Range 1-255 clock cycles

6.6 Digital Storage Elements (6 total)

- Six D Flip-Flops or Latches

6.7 Pipe Delay (Part of Combination Function Macrocell)

- 16 stage / 3 output
- One 1 stage fixed output
- Two 1-16 stage selectable outputs.

6.8 Programmable Delay

- 125 ns/250 ns/375 ns/500 ns @ 3.3 V
- Includes Edge Detection function

6.9 Additional Logic Functions (2 total)

- Two Deglitch filter macro cells

6.10 RC Oscillator

- 25 kHz and 2 MHz selectable frequency
- First stage divider (4): OSC/1, OSC/2, OSC/4, and OSC/8
- Second stage divider (5): OSC/1, OSC/4, selectable (OSC/8, OSC/12, OSC/24, or OSC/64), OSC/3, and additional OSC/3 (from selectable output)

7.0 I/O Pins

The SLG46722 has a total of 18 multi-function I/O pins which can function as either a user defined Input or Output, as well as serving as a special function (such as outputting the voltage reference), or serving as a signal for programming of the on-chip Non Volatile Memory (NVM).

Normal Mode pin definitions are as follows:

- Pin 2: general purpose input
- Pin 3: general purpose input or output
- Pin 4: general purpose input or output
- Pin 5: general purpose input or output
- Pin 6: general purpose input or output
- Pin 7: general purpose input or output
- Pin 8: general purpose input or output or POR output
- Pin 9: general purpose input or output
- Pin 10: general purpose input or output
- Pin 12: general purpose input or output
- Pin 13: general purpose input or output
- Pin 14: general purpose input or output
- Pin 15: general purpose input or output
- Pin 16: general purpose input or output
- Pin 17: general purpose input or output
- Pin 18: general purpose input or output
- Pin 19: general purpose input or output
- Pin 20: general purpose input or output or external clock

Programming Mode pin definitions are as follows;

- Pin 1: Vdd power supply
- Pin 2: Vpp programming voltage
- Pin 11: ground
- Pin 16: programming mode control
- Pin 17: programming ID pin
- Pin 18: programming SDIO pin
- Pin 19: programming SRDWB pin
- Pin 20: programming SCL pin

Of the 18 user defined I/O pins on the SLG46722, all but one of the pins (Pin 2) can serve as both digital input and digital output. Pin 2 can only serve as a digital input pin.

7.1 Input Modes

Each I/O pin can be configured as a digital input pin with/without buffered Schmitt Trigger, or can also be configured as a low voltage digital input.

7.2 Output Modes

Pins 3, 4,5, 6, 7, 8, 9, 10, 12, 13, 14, 15, 16, 17, 18, 19 and 20 can all be configured as digital output pins.

7.3 Pull Up/Down Resistors

All I/O pins have the option for user selectable resistors connected to the input structure. The selectable values on these resistors are 10 kΩ, 100 kΩ and 1 MΩ. In the case of Pin 2, the resistors are fixed to a pull-down configuration. In the case of all other I/O pins, the internal resistors can be configured as either pull-up or pull-downs.

8.0 Connection Matrix

The Connection Matrix in the SLG46722 is used to create the internal routing for internal functions of the device once it is programmed. The registers are programmed from the one-time NVM cell during Test Mode Operation. All of the connection point for each logic cell within the SLG46722 has a specific digital bit code assigned to it that is either set to active “High” or inactive “Low” based on the design that is created. Once the 1024 register bits within the SLG46722 are programmed a fully custom circuit will be created.

The Connection Matrix has 64 inputs and 95 outputs. Each of the 64 inputs to the Connection Matrix is hard-wired to a particular source macrocell, including I/O pins, LUTs, other digital resources and V_{DD} and V_{SS}. The input to a digital macrocell uses a 6-bit register to select one of these 64 input lines.

For a complete list of the SLG46722’s register table, see Section 18.0 Appendix A - SLG46722 Register Definition.

9.0 Combinatorial Logic

Combinatorial logic is supported via fifteen Lookup Tables (LUTs) within the SLG46722. There are five 2-bit LUTs, nine 3-bit LUTs, and one 4-bit LUT. The device also includes two Combination Function Macrocells that can be used as LUTs. For more details, please see Section 10.0 Combination Function Macro Cells.

Inputs/Outputs for the fifteen LUTs are configured from the connection matrix with specific logic functions being defined by the state of NVM bits. The outputs of the LUTs can be configured to any user defined function, including the following standard digital logic devices (AND, NAND, OR, NOR, XOR, XNOR).

9.1 2-Bit LUT

The five 2-bit LUTs each take in two input signals from the connection matrix and produce a single output, which goes back into the connection matrix.

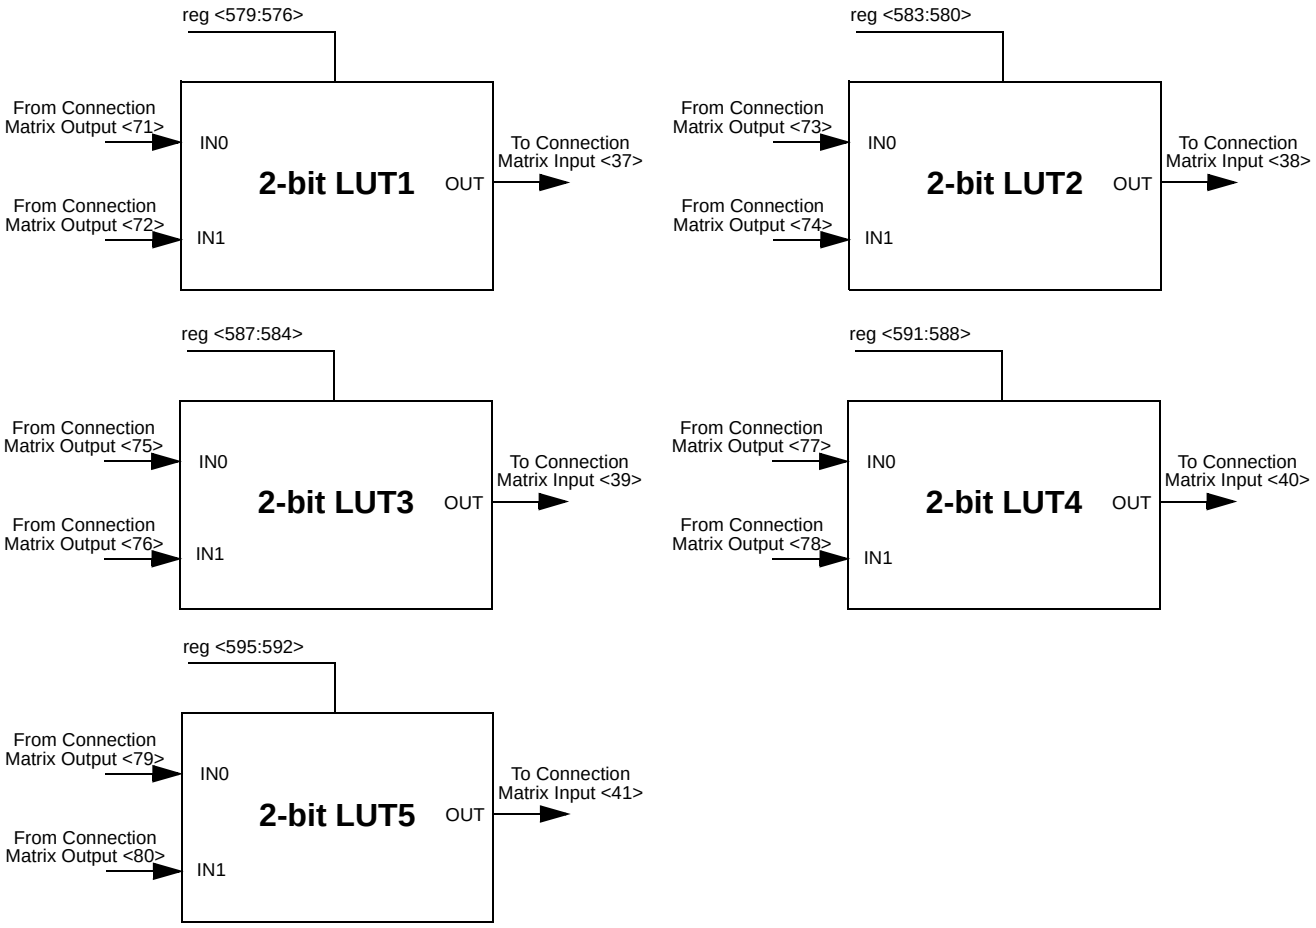

Figure 6. 2-bit LUTs

Table 21. 2-bit LUT1 Truth Table.

0	1	reg <593>
1	0	reg <594>
1	1	reg <595>

Each 2-bit LUT uses a 4-bit register signal to define their output functions;

2-Bit LUT1 is defined by reg<579:576>

2-Bit LUT2 is defined by reg<583:580>

2-Bit LUT3 is defined by reg<587:584>

2-Bit LUT4 is defined by reg<591:588>

2-Bit LUT5 is defined by reg<595:592

The table below shows the register bits for the standard digital logic devices (AND, NAND, OR, NOR, XOR, XNOR) that can be created within each of the four 2-bit LUT logic cells.

Table 26. 2-bit LUT Standard Digital Functions.

Function	MSB			LSB
AND-2	1	0	0	0
NAND-2	0	1	1	1
OR-2	1	1	1	0
NOR-2	0	0	0	1
XOR-2	0	1	1	0
XNOR-2	1	0	0	1

9.2 3-Bit LUT

The nine 3-bit LUTs each take in three input signals from the connection matrix and produce a single output, which goes back into the connection matrix.

Each 3-bit LUT uses a 8-bit register signal to define their output functions;

3-Bit LUT1 is defined by reg<604:597>

3-Bit LUT2 is defined by reg<612:605>

3-Bit LUT3 is defined by reg<620:613>

3-Bit LUT4 is defined by reg<628:621>

3-Bit LUT5 is defined by reg<636:629>

3-Bit LUT6 is defined by reg<644:637>

3-Bit LUT7 is defined by reg<652:645>

3-Bit LUT8 is defined by reg<660:653>

3-Bit LUT9 is defined by reg<676:669>

The table below shows the register bits for the standard digital logic devices (AND, NAND, OR, NOR, XOR, XNOR) that can be created within each of the six3-bit LUT logic cells.

Table 36. 3-bit LUT Standard Digital Functions.

Function	MSB							LSB
AND-3	1	0	0	0	0	0	0	0
NAND-3	0	1	1	1	1	1	1	1
OR-3	1	1	1	1	1	1	1	0
NOR-3	0	0	0	0	0	0	0	1
XOR-3	1	0	0	1	0	1	1	0
XNOR-3	0	1	1	0	1	0	0	1

9.3 4-Bit LUT

The one 4-bit LUT takes in four input signals from the connection matrix and produces a single output, which goes back into the connection matrix.

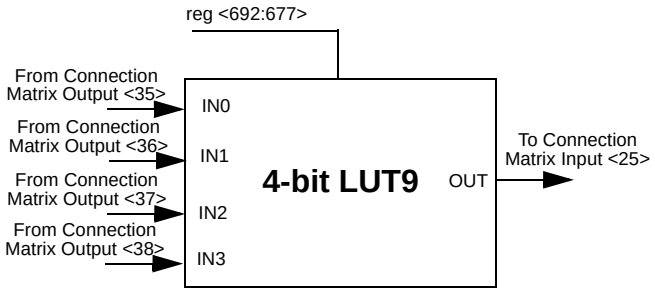

Figure 8. 2-bit LUTs

10.0 Combination Function Macro Cells

The SLG46722 has two combination function macrocells that can serve more than one logic or timing function. In each case, they can serve as a Look Up Table (LUT), or as another logic or timing function. See the list below for the functions that can be implemented in these macrocells;

- One macrocell that can serve as either 2-bit LUT or as D Flip Flop
- One macrocell that can serve as either 3-bit LUT or as Pipe Delay

Inputs/Outputs for the two combination function macrocells are configured from the connection matrix with specific logic functions being defined by the state of NVM bits. When used as a LUT to implement combinatorial logic functions, the outputs of the LUTs can be configured to any user defined function, including the following standard digital logic devices (AND, NAND, OR, NOR, XOR, XNOR).

10.1 2-Bit LUT or D Flip Flop Macrocells

There is one macrocell that can serve as either a 2-bit LUT or as a D Flip Flop. When used to implement LUT function, the 2-bit LUT takes in two input signals from the connection matrix and produce a single output, which goes back into the connection matrix. When used to implement D Flip Flop function, the two input signals from the connection matrix go to the data (d) and clock (clk) inputs for the Flip Flop, with the output going back to the connection matrix.

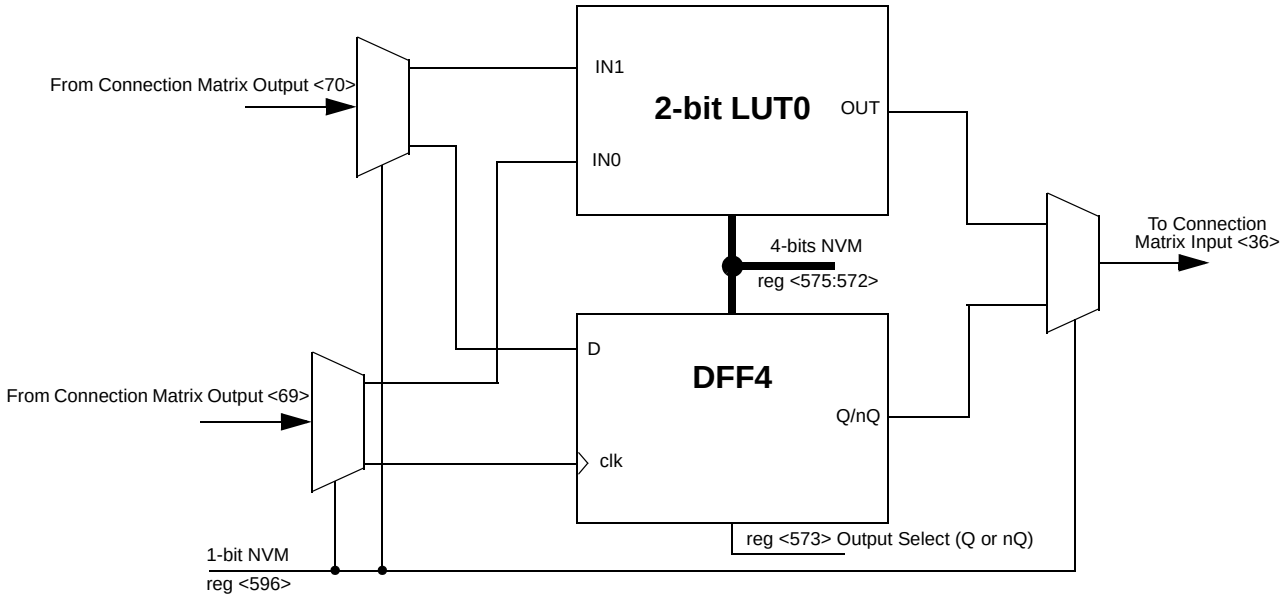

Figure 9. 2-bit LUT0 or DFF4

10.1.1 2-Bit LUT or D Flip Flop Macrocells Used as 2-Bit LUTs

DFF4 Output Select	573	0: Q output 1: nQ output
DFF4 Initial Polarity Select	574	0: Low 1: High

10.2 3-Bit LUT or Pipe Delay Macrocell

There is one macrocell that can serve as either a 3-bit LUT or as a Pipe Delay.

When used to implement LUT functions, the 3-bit LUT take in three input signals from the connection matrix and produces a single output, which goes back into the connection matrix.

When used as a pipe delay, there are three inputs signals from the matrix, Input (IN), Clock (CLK) and Reset (RST). The pipe delay cell is built from 16 D Flip-Flop logic cells that provide the three delay options, two of which are user selectable. The DFF cells are tied in series where the output (Q) of each delay cell goes to the next DFF cell. The first delay option (OUT2) is fixed at the output of the first flip-flop stage. The other two outputs (OUT0 and OUT1) provide user selectable options for 1 – 16 stages of delay. There are delay output points for each set of the OUT0 and OUT1 outputs to a 4-input mux that is controlled by reg <664:661> for OUT0 and reg <668:665> for OUT1. The 4-input mux is used to control the selection of the amount of delay.

The overall time of the delay is based on the clock used in the SLG46722 design. Each DFF cell has a time delay of the inverse of the clock time (either external clock or the RC Oscillator within the SLG46722). The sum of the number of DFF cells used will be the total time delay of the Pipe Delay logic cell.

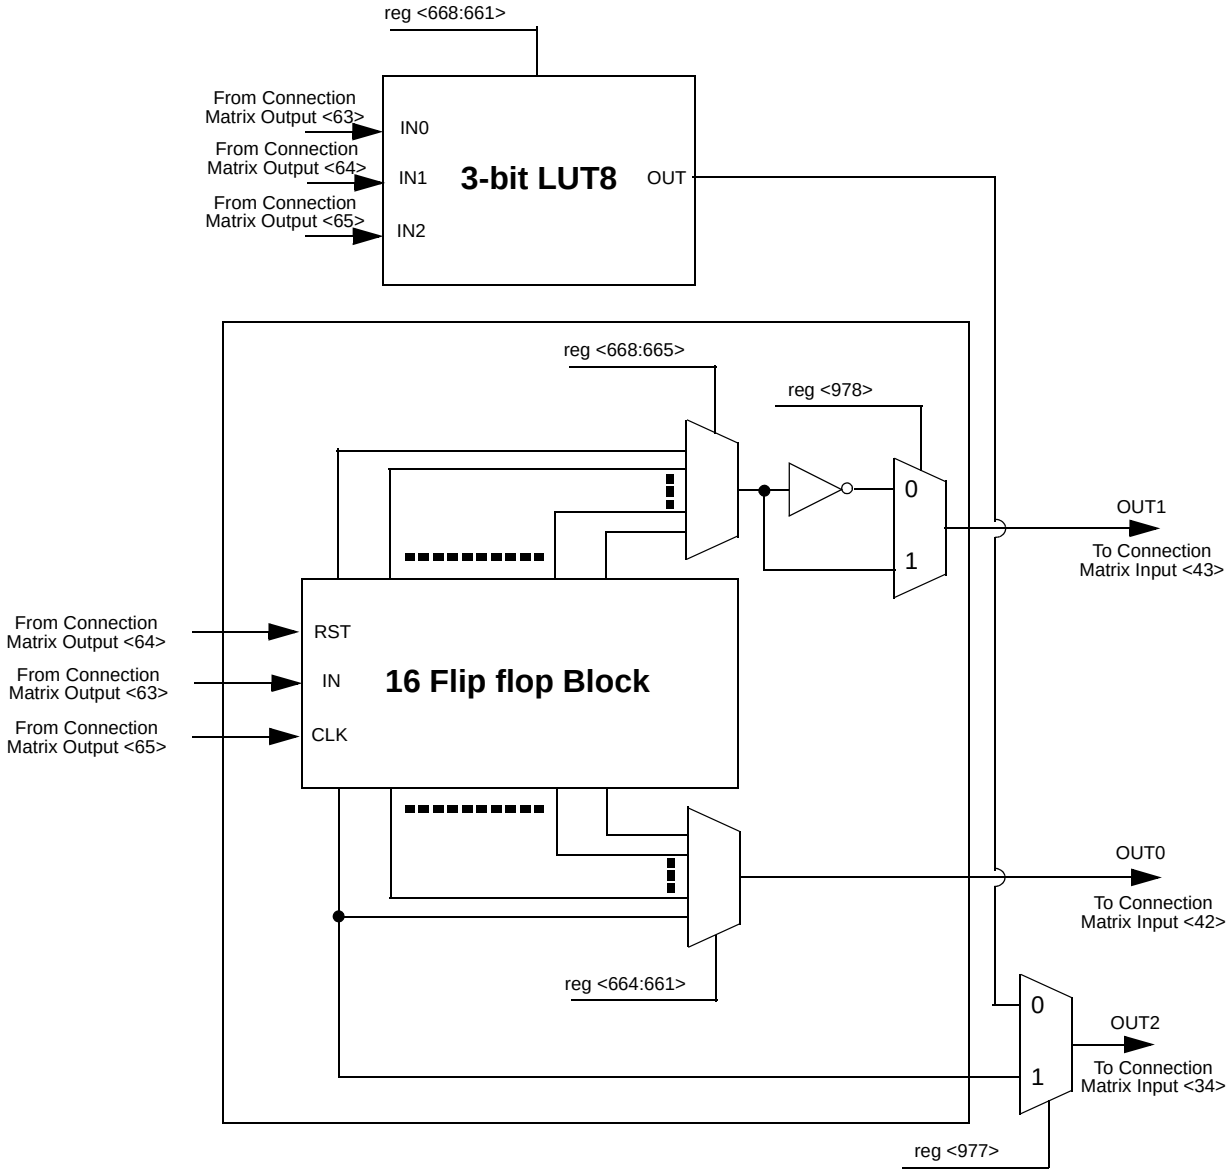

Figure 10. 3-bit LUT8 or Pipe Delay

Pipe delay OUT1 Polarity Select Bit	reg<978>	0: Non-inverted 1: Inverted

11.0 Digital Storage Elements (DFFs/Latches)

There are six D Flip Flop / Latches (DFF/Latch logic cells within the SLG46722 available for design. The source and destination of the inputs and outputs for the DFF/Latches are configured from the connection matrix. All DFF/Latch macrocells have user selection for initial state. DFF0 has the option to connect both the Q and Q Bar outputs to the connection matrix, DFF1, DFF2, DFF3, DFF5 and DFF6 can only connect the Q output to the matrix. The macrocells DFF0, DFF1, DFF2 and DFF3 have an additional input from the matrix that can serve as a nSet or nReset function to the macrocell.

Note that one of the Combination Function Macrocells (LUT 2_0 / DFF4) can also operate as a DFF or a 2-bit LUT please see Section 10.1 2-Bit LUT or D Flip Flop Macrocells for the description of this Combination Function macrocell.

The operation of the D Flip-Flop and Latch will follow the functional descriptions below:

DFF: CLK is rising edge triggered, then Q = D; otherwise Q will not change

Latch: if CLK = 0, then Q = D

if CLK = 1, then Q will not change

12.0 Counters/Delay Generators (CNT/DLY)

There are eight configurable counters/delay generators in the SLG46722. Two of these counters/delay generators are 14-bit (CNT/DLY 0 and 1), and six of the counters/delay generators are 8-bit (CNT/DLY 2, 3, 4, 5, 6, 7). For flexibility, each of these macrocells has a large selection of internal and external clock sources, as well as the option to chain from the output of the previous (N-1) CNT/DLY macrocell, to implement longer count / delay circuits.

Three of the counter/delay generator macrocells (CNT/DLY, 1,2,3) have two inputs from the connection matrix, one for Delay Input/Reset Input (Delay_In/Reset_In), and one for an external counter/clock source. Five of the counter/delay generator macrocells (CNT/DLY 0, 4, 5, 6, 7) have one input from the connection matrix, which has a shared function of either a Delay Input or an external clock input.

13.0 Pipe Delay (PD)

The SLG46722 has a pipe delay logic cell that is shared with the LUT3_8 in one of the Combination Function macrocells. The user can select one of these functions to use in a design, but not both. Please see Section 10.2 3-Bit LUT or Pipe Delay Macrocell for the description of this Combination Function macrocell.

14.0 Programmable Delay / Edge Detector

The SLG46722 has a programmable time delay logic cell available that can generate a delay that is selectable from one of four timings (time1) configured in the GreenPAK Designer. The programmable time delay cell can generate one of four different delay patterns, rising edge detection, falling edge detection, both edge detection and both edge delay. These four patterns can be further modified with the addition of delayed edge detection, which adds an extra unit of delay as well as glitch rejection during the delay period. See the timing diagrams below for further information.

15.0 Additional Logic Functions

The SLG46722 has two additional logic functions that serve as deglitch filters.

15.1 Deglitch Filter

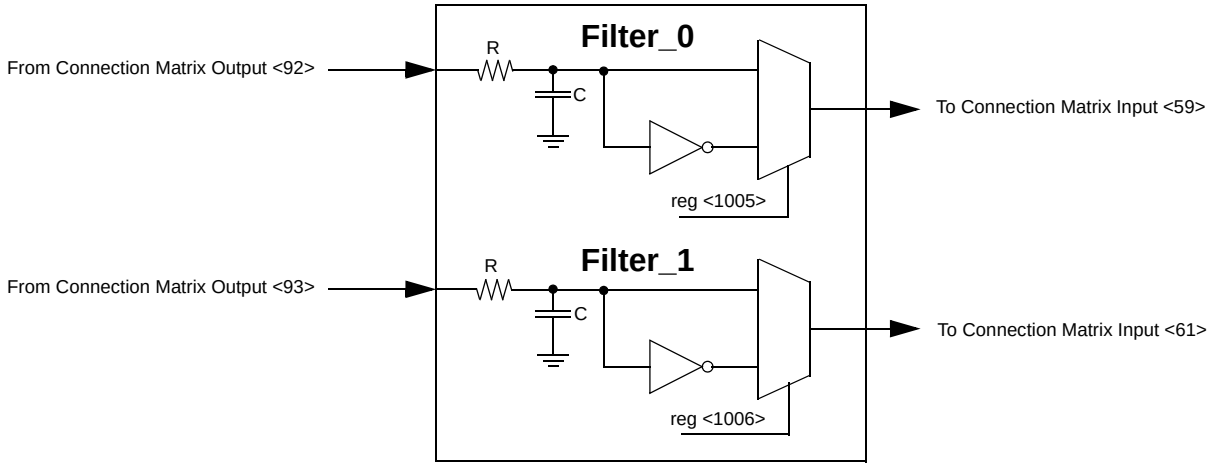

Figure 32. Deglitch Filter

16.0 RC Oscillator (RC Osc)

16.1 RC Oscillator Overview

The SLG46722 has two internal RC oscillators, one that runs at 25 kHz and one that runs at 2 MHz. The user can select one of these fundamental frequencies for the RC OSC Macrocell, or the fundamental frequency can also come from an external clock input (Pin 20). There are two divider stages that allow the user flexibility for introducing clock signals on various Connection Matrix Input lines. The first stage divider allows the selection of /1, /2, /4 or /8 divide down frequency from the fundamental. The second stage divider has an input of one frequency from the first stage divider, and outputs five different frequencies on Connection Matrix Input lines <45>, <46>, <47>, <48>, and <49>. See *Figure 33* below for details of the frequencies for each of these five Connection Matrix Inputs.

If PWR DOWN input of oscillator is LOW, the oscillator will be turned on. If PWR DOWN input of oscillator is HIGH the oscillator will be turned off. The PWR DOWN signal has the highest priority.

16.2 RC OSC Block Diagram

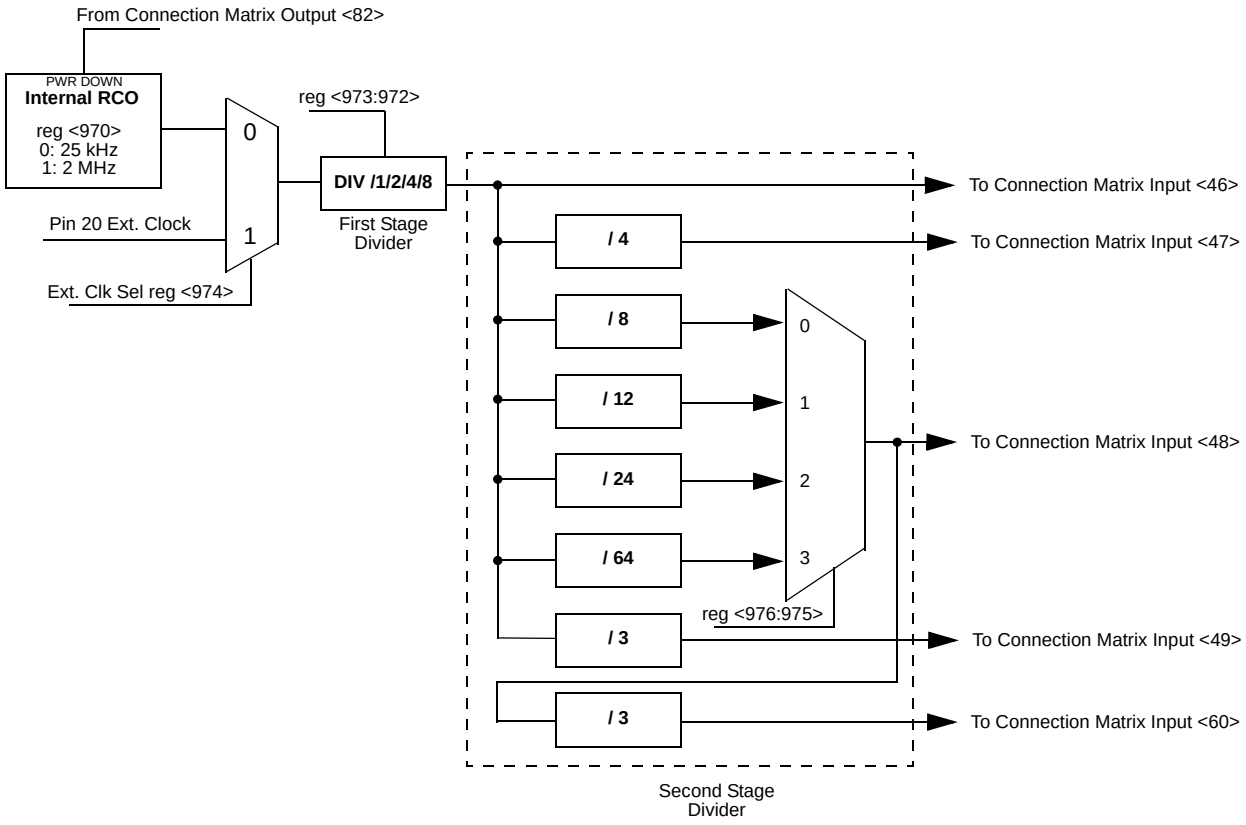

Figure 33. RC OSC Block Diagram

17.0 Power On Reset (POR)

17.1 POR Overview

The Power On Reset (POR) Macrocell will produce a high or “1” signal as an output when the device power supply (V_{DD}) rises to approximately 1.4 V. The typical internal delay for POR to release POR_IO will be 1 ms + α depending on the power slope, because there is adaptive power-up sequence. The next internal signal will be POR_CORE and then POR_IO_DLY, each of which is further delayed by approximately 1 µs. The rise of POR_IO_DLY will trigger the I/O pins to exit tri-state, and the device will become active.

17.2 POR Timing Diagram

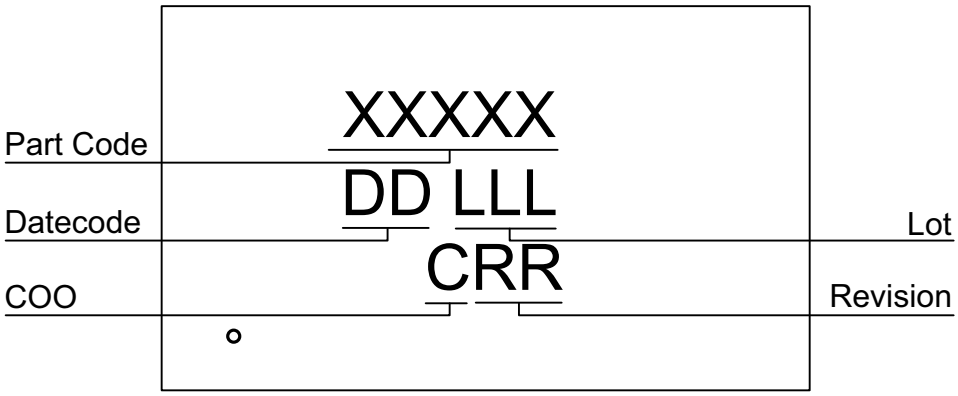
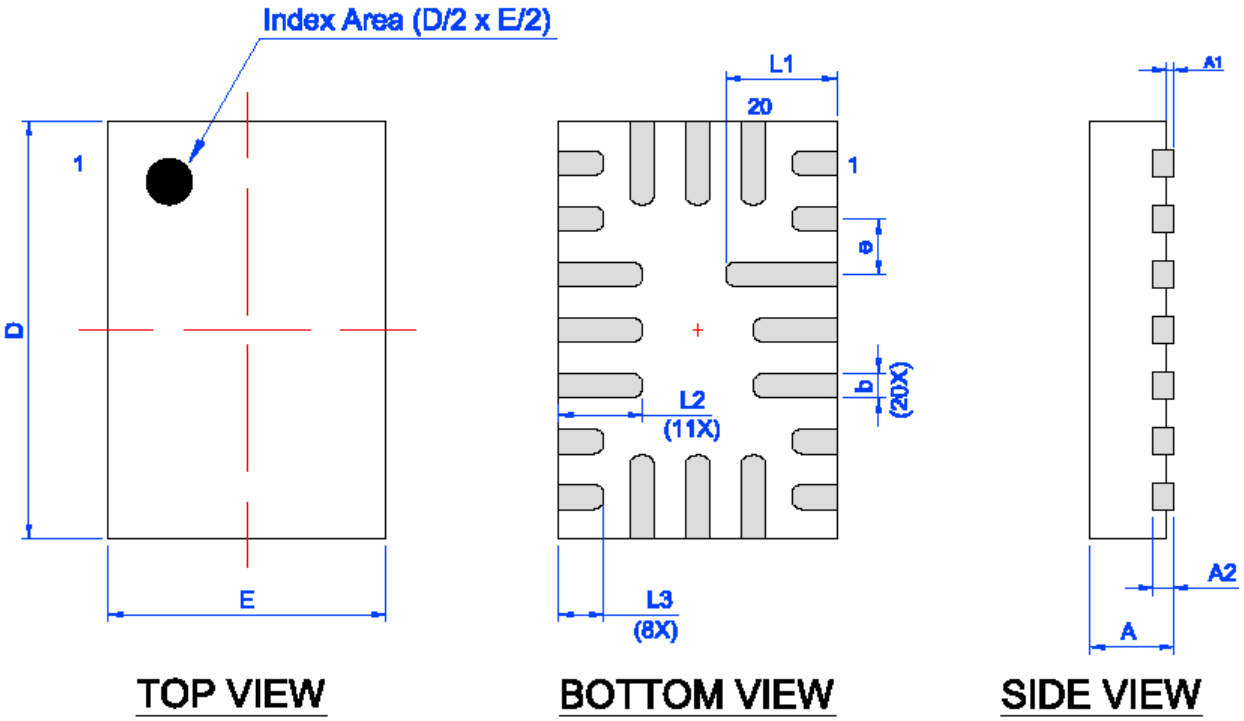
19.0 Package Top Marking System Definition



XXXXX – Part ID Field: identifies the specific device configuration
DD – Date Code Field: Coded date of manufacture
LLL – Lot Code: Designates Lot #
C – Assembly Site/COO: Specifies Assembly Site/Country of Origin
RR – Revision Code: Device Revision

20.0 Package Drawing and Dimensions

STQFN 20L 2x3mm 0.4P COL Package
JEDEC MO-220, Variation WECE
IC Net Weight: 0.015 g



Unit: mm

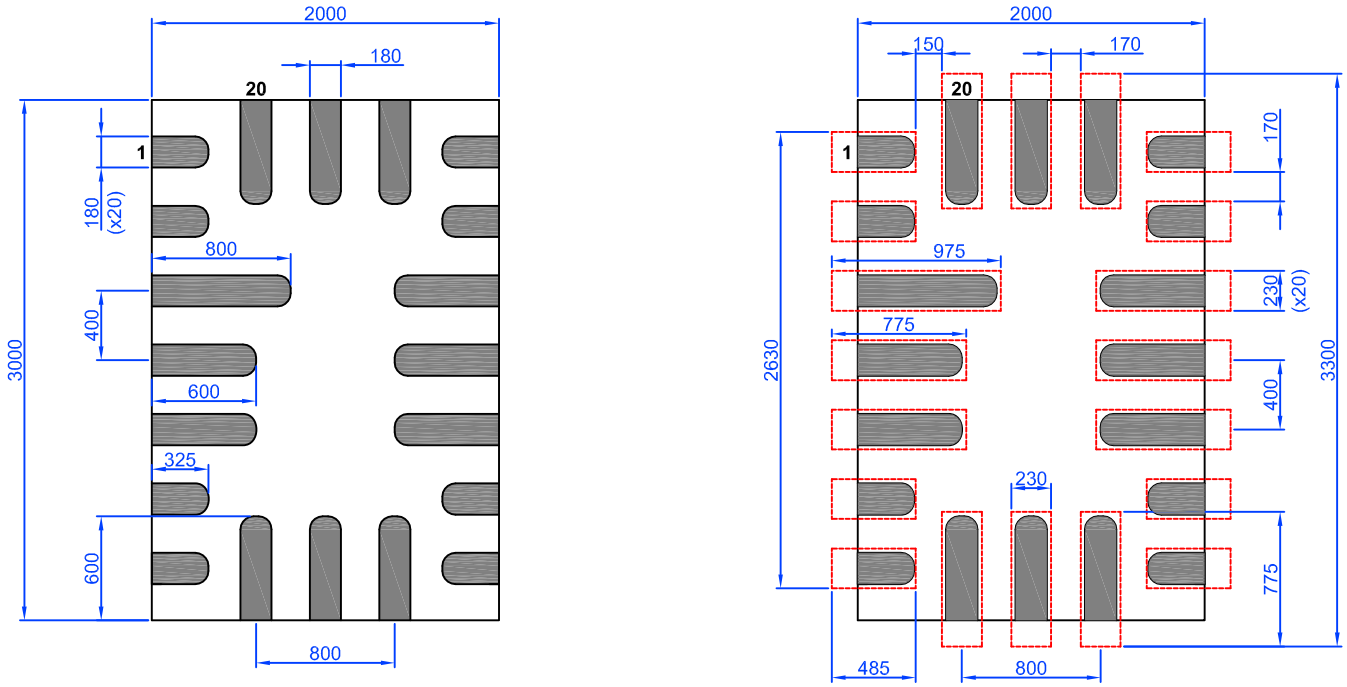
Units: µm



23.0 Recommended Reflow Soldering Profile

Please see IPC/JEDEC J-STD-020: latest revision for reflow profile based on package volume of 3.30 mm^3 (nominal). More information can be found at www.jedec.org.

24.0 Revision History

Date	Version	Change
8/29/2014	1.05	Added Emulator Reset description for Pin 3 Updated Electrical Characteristics VIH/VIL/VOH/VOL values Fixed table formatting for some tables
8/06/2014	1.04	Updated Electrical Characteristics VIH/VIL/VOH/VOL values
7/29/2014	1.03	Fixed ESD information
7/9/2014	1.02	Fixed typo on Pin Configuration Fixed LUT Standard Digital Function Tables
7/7/2014	1.01	Fixed Package Outline Drawing (removed incorrect side view)
7/3/2014	1.0	Production Release
3/18/2014	0.45	Updated block diagrams and timing diagrams for clarity
2/3/2014	0.44	Fixed typos and Cleanup
11/21/2013	0.43	Added ESD Ratings and MSL to Absolute Maximum Conditions
11/20/2013	0.42	Updated Package Outline Drawing Updated Tape and Reel Specifications Added Recommended Land pattern
10/9/2013	0.41	Updated VIH for Logic Input
10/2/2013	0.4	Updated VIH/VIL values
9/11/13	0.31	Adjusted RC OSC Block Diagram
7/17/2013	0.3	Added IO Structures
5/7/2013	0.2	Added newsections Updated Tape and Reel spec
11/14/2012	0.1	Initial release

Silego Website & Support

Silego Technology Website

Silego Technology provides online support via our website at http://www.silego.com/.This website is used as a means to make files and information easily available to customers.

For more information regarding Silego Green products, please visit:

http://greenpak.silego.com/
http://greenpak2.silego.com/
http://greenpak3.silego.com/
http://greenfet.silego.com/
http://greenfet2.silego.com/
http://greenclk.silego.com/

Products are also available for purchase directly from Silego at the Silego Online Store at http://store.silego.com/.

Silego Technical Support

Datasheets and errata, application notes and example designs, user guides, and hardware support documents and the latest software releases are available at the Silego website or can be requested directly at info@silego.com.

For specific GreenPAK design or applications questions and support please send e-mail requests to GreenPAK@silego.com

Users of Silego products can receive assistance through several channels:

Online Training

Silego Technology has live training assistance and sales support available at http://www.silego.com/. Please contact us to schedule a 1 on 1 training session with one of our application engineers.

Contact Your Local Sales Representative

Customers can contact their local sales representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. More information regarding your local representative is available at the Silego website or send a request to info@silego.com

Contact Silego Directly

Silego can be contacted directly via e-mail at info@silego.com or user submission form, located at the following URL:

http://support.silego.com/

Other Information

The latest Silego Technology press releases, listing of seminars and events, listings of world wide Silego Technology offices and representatives are all available at http://www.silego.com/

THIS PRODUCT HAS BEEN DESIGNED AND QUALIFIED FOR THE CONSUMER MARKET. APPLICATIONS OR USES AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS ARE NOT AUTHORIZED. SILEGO TECHNOLOGY DOES NOT ASSUME ANY LIABILITY ARISING OUT OF SUCH APPLICATIONS OR USES OF ITS PRODUCTS.
