1 SCOPE

This document describes key hardware aspects of the Laird 60-2230C-P/ 60-2230C-PU M.2 module providing either PCIe bus interface for WLAN connection and UART(60-2230C-P)/USB (60-2230C-PU) for Bluetooth® (including Low Energy or LE) connection. This document is intended to assist device manufacturers and related parties with the integration of this module into their host devices. Data in this document is drawn from the Marvell 88W8997 datasheet issued in April 25, 2016.

Note that the information in this document is subject to change. Please contact Laird to obtain the most recent version of this document.

2 INTRODUCTION

2.1 General Description

The 60-2230C-P/60-2230C-PU module is a dual band 2x2 802.11ac WLAN plus Bluetooth 4.2 dual mode adapter; it complies with M.2 2230 E-Key standard. The module provides both simultaneous and independent operation of the following:

- IEEE 802.11ac (Wave 2), 2x2 receive Multi-User MIMO spatial stream multiplexing with data rates up to MCS9 (866.7 Mbps)
- Bluetooth (Class 1 and Class 2)
- Bluetooth 4.2 (with Low Energy or LE)
- Bluetooth 5 Ready
- Bluetooth *Smart Ready* operation
- Three-way coexistence for WLAN and Bluetooth

Note: The *Bluetooth*® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. and any use of such marks by Laird is under license. Other trademarks and trade names are those of their respective owners.

Internal coexistence arbitration and a Mobile Wireless System (MWS) serial transport interface provide the functionality for connecting an external Long Term Evolution (LTE).

The module integrates all WLAN and Bluetooth functionality into a single package which supports low-cost and simple implementation along with flexibility for platform-specific customization. In addition, it has low power consumption radio architecture and proprietary power save technologies to extended battery life.

On the DFS engine, the module supports 802.11h Dynamic Frequency Selection (DFS) to detect the presence of radar signals; support is extended to 80 MHz mode under the 802.11ac channelization modes. In addition, the E-DFS (Enhanced DFS) scheme is designed to increase pulse detection rates for shorter (0.5 us, 0.8 us, 1 us), in-band DFS pulses. The scheme is designed to minimize the false-alarm rate for out-of-band DFS pulse.

WLAN interface:

- PCIe – Supports PCIe V3.0 Gen 1/Gen 2 rate (2.5/5 Gbps) interface

Bluetooth Interfaces:

- USB 2.0 – 60-2230C-PU only
- High-Speed UART – 60-2230C-P only

The 60-2230C-P/60-2230C-PU modules also provide a PCM interface for master or slave mode – with the option of an 8-bit or 16-bit width size. Pins CON[0], CON[1], and CON[2] are used to configure the operation interface.

- 60-2230C-P – The interfaces are PCIe/UART (WLAN/Bluetooth) with configuration setting to 011.
- 60-2230C-PU – The interfaces are PCIe/USB (WLAN/Bluetooth) with configuration setting to 010.

3 FEATURES SUMMARY

The Laird 60-2230C-P/60-2230C-PU device features are described in [Table 1](#).

Table 1: 60-2230C-P/60-2230C-PU features

Feature	Description				
Radio Front End	- Integrates the complete transmit/receive RF paths including band pass filter, diplexer, switches, reference crystal oscillator, and power manage unit (PMU) - Supports 20/40/80 MHz channel bandwidth - WLAN/Bluetooth share one antenna				
Coexistence	Coexistence arbitration for WLAN, Bluetooth, and LTE operation				
Power Management	Dynamic Voltage Scaling (DVS) and Adaptive Voltage Scaling (AVS) feature supports the latest Marvell SoC and processor power control scheme.				
Pre-Calibration	RF system-tested and calibrated in production.				
Sleep Clock	An external sleep clock of 32.768 KHz is required during power save mode.				
Host Interface	- PCIe V3.0 Gen 1/Gen 2 for WLAN - USB 2.0, HS-UART for Bluetooth HCI (compatible with any upper layer Bluetooth stack) - PCM digital audio interface for Bluetooth audio application.				
	Strap Value	CONFIG_HOST[2-0]	WLAN	Bluetooth/BLE	ROM Notes
	010		PCIe	USB 2.0	-
	011		PCIe	UART	-
Reference Frequency	- Incorporates a 40 MHz reference frequency source in package - An external sleep clock is recommended for minimal current consumption. If no sleep clock input is provided, an internal sleep clock (derived from the reference clock) is used. An approximate 50 uA current increase on the 3.3V rail.				
Advanced WLAN	- A-MPDU RX (de-aggregation) and TX (aggregation) supports 802.11ac single-MPDU A-MPDU - Multi-BSS/Station - Transmit rate adaption, transmit power control - Modulation and coding scheme (MCS): 802.11ac—MCS0-9 Nsts=1 and 2 802.11n—MCS0-15 - Dynamic frequency selection (DFS) – Radar detection 20/40/80 MHz channel bandwidths support - On-chip gain selectable LNA with optimized noise figure and power consumption - Internal PA with optimized gain distribution for linearity and noise performance - Support Wild variety of WLAN encryption: TKIP/WEP/AES				
Advanced Bluetooth	- Bluetooth 4.2 (BDR/EDR/LE), Bluetooth Class 1 - Bluetooth 5 ready - Supports the following data rates: 1 Mbps (GFSK), 2 Mbps ($\pi/4$-DQPSK), 3 Mbps (8-DPSK) - Digital audio interface with PCM/TDM interface for voice application - Adaptive Frequency Hopping (AFH) using Package Error Rate (PER) - Standard SDIO or UART HCI transport layer - WLAN/Bluetooth coexistence protocol support - Shared LNA with WLAN/Bluetooth - Encryption (AES) support

5 WLAN FUNCTIONAL DESCRIPTION

The 60-2230C-P/60-2230C-PU M.2 module is designed based on the 60-SIPT SiP. It is optimized for high-speed, reliable, and low-power embedded applications. It is integrated with dual-band WLAN (2.4 GHz/5 GHz) and Bluetooth 4.2. Its functionality includes the following:

- Improved throughput on the link due to frame aggregation, RIFS (reduced inter-frame spacing), and half-guard intervals.
- Support for STBC (Space Time Block Codes) and LDPC (Low Density Parity Check) codes.
- Improved 11n performance due to features such as 11n frame aggregation (A-MPDU and A-MSDU) and low-overhead host-assisted buffering (RX A-MSDU and RX A-MPDU). These techniques can improve performance and efficiency of applications involving large bulk data transfers such as file transfers or high-resolution video streaming.
- IEEE 802.11 ac (Wave 2), 2X2 receive Multi-User MIMO (MU-MIMO) spatial stream multiplexing with data rate up to MCS9 (866.7 Mbps).

Additional functionality is listed in [Table 3](#).

6 BLUETOOTH FUNCTIONAL DESCRIPTION

The 60-2230C-P/60-2230C-PU Bluetooth (BT) block is based on the 60-SIPT SiP that already has fully-integrated Bluetooth baseband and radio. Several features and functions are listed in [Table 4](#).

Table 4: Bluetooth functions

Feature	Description
Bluetooth Interface	Voice interface:
	Hardware support for continual PCM data transmission/reception without processor overhead.
	Standard PCM clock rates from 64 kHz to 2.048 MHz with multi-slot handshake and synchronization.
	A-law, U-law, and linear voice PCM encoding/decoding.
	- High-Speed UART interface – 60-2230C-P only - USB 2.0 – 60-2230C-PU only
Bluetooth Core functionality	- Bluetooth 4.2 - Bluetooth Class 2/Bluetooth class 1 - WLAN and Bluetooth share same LNA and antenna - Digital audio interfaces with PCM/TDM interface for voice application - Baseband and radio BDR and EDR package type: 1Mbps, 2Mbps, 3Mbps - Fully functional Bluetooth baseband: AFH, forward error correction, header error control, access code correction, CRC, encryption bit stream generation, and whitening - Adaptive Frequency Hopping (AFH) using Packet Error Rate (PER) - Interlaced scan for faster connection setup - Simultaneous active ACL connection setup - Automatic ACL package type selection - Full master and slave piconet support - Scatter net support - SCO/eSCO links with hardware accelerated audio signal processing and hardware supported PPEC algorithm for speech quality improvement - All standard SCO/eSCO voice coding - All standard pairing, authentication, link key, and encryption operations - Encryption (AES) support
Bluetooth Low Energy (BLE) Core functionality	- Advertiser, Scanner, Initiator, Master, and Slave roles support (connects up to 16 links) - WLAN/Bluetooth Coexistence (BCA) protocol support - Shared RF with BDR/EDR - Encryption (AES) support - Intelligent Adaptive Frequency Hopping (AFH) - LE privacy 1.2 - LE Secure Connection - LE Data Length Extension - LE Advertising Length Extension 2 Mbps LE - Direction Finding – Connectionless Angle of Departure (AoD) - Direction Finding – Connectionless Angle of Arrival (AoA)

8 ELECTRICAL CHARACTERISTICS

8.1 Absolute Maximum Ratings

Table 5 summarizes the absolute maximum ratings and Table 6 lists the recommended operating conditions for the 60-2230C-P/60-2230C-PU. Absolute maximum ratings are those values beyond which damage to the device can occur. Functional operation under these conditions, or at any other condition beyond those indicated in the operational sections of this document, is not recommended.

Note: Maximum rating for signals follows the supply domain of the signals.

Table 5: Absolute maximum ratings

Symbol (Domain)	Parameter	Max Rating	Unit
VIO	I/O configuration power supply (1.8V system)	2.2	V
3V3	External 3.3V power supply	4.0	V
Storage	Storage Temperature	-40 to +85	°C
ANT0; ANT1	Maximum RF input (reference to 50-Ω input)	+10	dBm
ESD	Electrostatic discharge tolerance	2000	V

8.2 Recommended Operating Conditions

Table 6: Recommended Operating Conditions

Symbol (Domain)	Parameter	Min	Typ	Max	Unit
VIO	WLAN and BT GPIO I/O power supply	1.62	1.8	1.98	V
3V3	External 3.3V power supply	2.97	3.30	3.63	V
T-ambient	Ambient temperature	-30	25	85	°C

8.3 DC Electrical Characteristics

Table 7 list the general DC electrical characteristics over recommended operating conditions (unless otherwise specified).

10 PCIE SPECIFICATIONS

The 60-2230C-P/60-2230C-PU PCIe host interface pins are powered from the AVDD18 voltage supply. The PCI Express interface supports a x1 PCI Express interface (one Lane). A Lane consists of an input and an output high-speed differential pair. Also supported is a PCI Express reference clock. Refer to the PCI Express Base Specification for more details on the functional requirements for the PCI Express interface signals.

13 MECHANICAL SPECIFICATIONS

Module dimensions of 60-2230C-P/60-2230C-PU are 22 mm x 30 mm x 3.3 mm. Detail drawings are shown in Figure 4.

Figure 4: Module dimension of 60-2230C-P/60-2230C-PU

Note: The Wi-Fi MAC address is located on the product label.

The last digit of Wi-Fi MAC address will be assigned to either "0", "4", "8", or "C".

The BT MAC address will be the Wi-Fi MAC on the label plus 3.

14 MOUNTING

The 60-2230C-P/60-2230C-PU connects to the host via a standard PCI EXPRESS M2 connector. The Kyocera's (www.Kyocera-connector.com) 6411 series provide 1.8 mm, 2.3 mm and 3.2 mm connector heights.

Because the 60-2230C-P/60-2230C-PU is a single-side component module, we recommend the following part number (which has a 2.3 mm connector height): **24-6411-067-101-894E**

The stand-off mating to the recommend 2.3 mm connector from EMI STOP (www.EMISTOP.com) is part number **F50M16-041525P1D4M**. Detail layout and stencil opening are show in Figure 5.

15 RF LAYOUT DESIGN GUIDELINES / PRECAUTIONS

The following is a list of RF layout design guidelines and recommendation when installing a Laird radio into your device.

- Do not run antenna cables directly above or directly below the radio.
- Do not place any parts or run any high speed digital lines below the radio.
- If there are other radios or transmitters located on the device (such as a *Bluetooth* radio), place the devices as far apart from each other as possible. Also, make sure there is at least 25 dB isolation between the Bluetooth antenna and the Wi-Fi antenna.
- Ensure that there is the maximum allowable spacing separating the antenna connectors on the Laird radio from the antenna. In addition, do not place antennas directly above or directly below the radio.
- Laird recommends the use of a double-shielded cable for the connection between the radio and the antenna elements.
- Be sure to put the capacitor on the power pin as close as possible to reduce the radiation issue.
- Use proper electro-static-discharge (ESD) procedures when installing the Laird radio module.
- To get maximum throughput when operate at MIMO 2x2, two antennas with at least 25 dB isolation are recommended.

- To avoid negatively impacting Tx power and receiver sensitivity, do not cover the antennas with metallic objects or components.
- Opening/handling/removing must be done on an anti-ESD treated workbench. All workers must be also have undergone anti-ESD treatment.
- The devices should be mounted within one year of the date of delivery.

17.1 FCC

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Important Note

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Country Code selection feature to be disabled for products marketed to the US/Canada.

This device is intended only for OEM integrators under the following conditions:

1. The antenna must be installed such that 20 cm is maintained between the antenna and users, and
2. The transmitter module may not be co-located with any other transmitter or antenna,
3. For all products market in US, OEM has to limit the operation channels in CH1 to CH11 for 2.4G band by supplied firmware programming tool. OEM shall not supply any tool or info to the end-user regarding to Regulatory Domain change.

As long as the three conditions above are met, further **transmitter** testing will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Important Note

In the event that these conditions **cannot be met** (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID **cannot** be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

End Product Labeling

This transmitter module is authorized only for use in device where the antenna may be installed such that 20 cm may be maintained between the antenna and users. The final end product must be labeled in a visible area with the following:

Contains FCC ID: SQG-602230C.

Manual Information to the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

17.2 Industry Canada

Industry Canada Statement

This device complies with Industry Canada's license-exempt RSSs. Operation is subject to the following two conditions:

- This device may not cause interference; and
- This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

- l'appareil ne doit pas produire de brouillage;
- l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

This radio transmitter (IC: 3147A-602230C) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Le présent émetteur radio (IC: 3147A-602230C) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal. Les types d'antenne non inclus dans cette liste, et dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

Caution:

(i) The device for operation in the band 5150–5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;

(ii) For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall be such that the equipment still complies with EIRP limit;

(iii) For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the EIRP limits specified for point-to-point and non-point-to-point operation as appropriate; and

Operations in the 5.25-5.35GHz band are restricted to indoor usage only.

Avertissement:

(i) les dispositifs fonctionnant dans la bande de 5150 à 5250MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;

(ii) pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis pour les dispositifs utilisant les bandes de 5250 à 5350MHz et de 5470 à 5725 MHz doit être conforme à la limite de la p.i.r.e;

(iii) pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis (pour les dispositifs utilisant la bande de 5725 à 5850 MHz) doit être conforme à la limite de la p.i.r.e. spécifiée pour l'exploitation point à point et l'exploitation non point à point, selon le cas;

Les opérations dans la bande de 5.25-5.35GHz sont limités à un usage intérieur seulement.

Radiation Exposure Statement

This equipment complies with Canada radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator and your body.

Déclaration d'exposition aux radiations

Cet équipement est conforme Canada limites d'exposition aux radiations dans un environnement non contrôlé. Cet équipement doit être installé et utilisé à distance minimum de 20cm entre le radiateur et votre corps.

This device is intended only for OEM integrators under the following condition:

- The transmitter module may not be co-located with any other transmitter or antenna.

As long as the condition above is met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Cet appareil est conçu uniquement pour les intégrateurs OEM dans les conditions suivantes:

- Le module émetteur peut ne pas être coïmplanté avec un autre émetteur ou antenne.

Tant que les 1 condition ci-dessus sont remplies, des essais supplémentaires sur l'émetteur ne seront pas nécessaires. Toutefois, l'intégrateur OEM est toujours responsable des essais sur son produit final pour toutes exigences de conformité supplémentaires requis pour ce module installé.

Important Note

In the event that these conditions cannot be met (for example certain laptop configurations or co-location with another transmitter), then the Canada authorization is no longer considered valid and the IC ID cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.

Note Important

Dans le cas où ces conditions ne peuvent être satisfaites (par exemple pour certaines configurations d'ordinateur portable ou de certaines co-localisation avec un autre émetteur), l'autorisation du Canada n'est plus considéré comme valide et l'ID IC ne peut pas être utilisé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'une autorisation distincte au Canada.

End Product Labeling

The final end product must be labeled in a visible area with the following: **Contains IC: 3147A-602230C.**

Étiquette signalétique du produit final

Le produit final doit être étiqueté dans un endroit visible avec l'inscription suivante: **Contient des IC: 3147A-602230C.**

Manual Information to the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

Manuel d'information à l'utilisateur final

L'intégrateur OEM doit être conscient de ne pas fournir des informations à l'utilisateur final quant à la façon d'installer ou de supprimer ce module RF dans le manuel de l'utilisateur du produit final qui intègre ce module.

Le manuel de l'utilisateur final doit inclure toutes les informations réglementaires requises et avertissements comme indiqué dans ce manuel.

The OEM should consult with a qualified test house before entering their device into an EU member country to make sure all regulatory requirements have been met for their complete device.

Reference the Declaration of Conformities listed below for a full list of the standards that the modules were tested to. Test reports are available upon request.

18.1 EU Declarations of Conformity

This device complies with the essential requirements of the Radio Equipment directive: 2014/53/EU. The following test methods have been applied to prove presumption of conformity with the essential requirements of the Radio Equipment directive **2014/53/EU**:

Manufacturer:	Laird
Products:	60-2230C
EU Directives:	2014/53/EU – Radio Equipment Directive (RED)

Reference standards used for presumption of conformity:

Article Number	Requirement	Reference standard(s)
3.1a	Low voltage equipment safety	EN 60950-1:2006+A11+A1:2010+A12:2011+A2 2013
	RF Exposure	EN 62311:2008
		EN 50385:2002
3.1b	Protection requirements with respect to electromagnetic compatibility	EN 301 489-1 v2.2.0 (Draft) EN 301 489-17 v3.2.0 (Draft)
3.2	Means of the efficient use of the radio frequency spectrum	EN 300 328 v2.1.1 (2015-02) EN 301 893 v2.1.0 (Final Draft)

Declaration:

We, Laird, declare under our sole responsibility that the essential radio test suites have been carried out and that the above product to which this declaration relates is in conformity with all the applicable essential requirements of Article 3 of the EU Radio Equipment directive 2014/53/EU, when used for its intended purpose.
