

**DATA SHEET**

# SKY13455-31: 0.4 to 2.7 GHz SP12T Switch with MIPI RFFE Interface

## Applications

- 2G/3G/4G multimode cellular handsets (LTE, UMTS, CDMA2000, EDGE, GSM)
- Embedded data cards

## Features

- Broadband frequency range: 0.4 to 2.7 GHz
- Low insertion loss
- High isolation and linearity
- Integrated GSM harmonic filter
- Integrated, programmable MIPI interface
- Ten TRX ports, one GSM low band transmit port, and one GSM high band transmit port
- Small MCM (22-pin, 3.2 x 2.5 x 0.8 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

**Figure 1. SKY13455-31 Block Diagram**

## Description

The SKY13455-31 is a Single-Pole, Twelve-Throw (SP12T) antenna switch with integrated GSM transmit harmonic filter. The SKY13455-31 maintains a high linearity, high isolation, and low insertion loss performance, which makes it an ideal choice for UMTS, CDMA2000, EDGE, GSM, and LTE applications.

The design features two dedicated GSM transmit ports. The remaining ten ports are suitable for WCDMA transmit/receive and GSM receive functions. Three transmit ports (TRX1, TRX2, and TRX4) have been specifically designed to provide optimal LTE Band 13 performance. The switch exhibits an excellent triple beat ratio and 2<sup>nd</sup>/3<sup>rd</sup> order modulation distortion performance.

Switching is controlled by an integrated MIPI interface. Depending on the logic applied to the decoder, the antenna pin is connected to one of 12 switched RF ports using a low insertion loss path, while the paths between the antenna pin and the other RF pins are in a high isolation state. No external DC blocking capacitors are required on the RF paths.

The SKY13455-31 is manufactured in a compact, 3.2 x 2.5 x 0.8 mm, 22-pin surface mount Multi-Chip Module (MCM) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

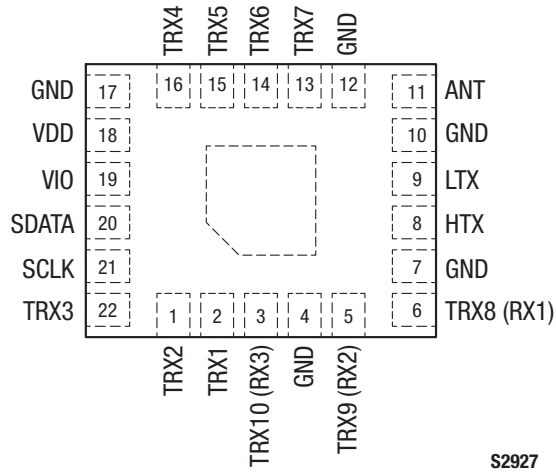

Figure 2. SKY13455-31 Pinout – 22-Pin MCM (Top View)

Table 1. SKY13455-31 Signal Descriptions

Pin #	Name	Description	Pin #	Name	Description
1	TRX2	RF input/output port 2 optimized for LTE Band 13 (704 to 787 MHz)	12	GND	Ground
2	TRX1	RF input/output port 1 optimized for LTE Band 13 (704 to 787 MHz)	13	TRX7	RF input/output port 7
3	TRX10 (RX3)	RF input/output port 10 (receive 3)	14	TRX6	RF input/output port 6
4	GND	Ground	15	TRX5	RF input/output port 5
5	TRX9 (RX2)	RF input/output port 9 (receive 2)	16	TRX4	RF input/output port 4 optimized for LTE Band 13 (704 to 787 MHz)
6	TRX8 (RX1)	RF input/output port 8 (receive 1)	17	GND	Ground
7	GND	Ground	18	VDD	DC power supply
8	HTX	GSM high band transmit RF input port with integrated harmonic filter	19	VIO	Interface supply voltage
9	LTX	GSM low band transmit RF input port with integrated harmonic filter	20	SDATA	Data
10	GND	Ground	21	SCLK	Clock
11	ANT	Antenna RF port	22	TRX3	RF input/output port 3

Note: Bottom ground paddles must be connected to ground.

**Table 2. SKY13455-31 Absolute Maximum Ratings**

Parameter	Symbol	Minimum	Maximum	Units
Power supply	VDD	2.5	5.0	V
Digital control signal	VIO		2	V
RF input power:	PIN			
LTX pin			+36	dBm
HTX pin			+34	dBm
All TRXx pins			+31	dBm
Storage temperature	TSTG	-55	+150	°C
Operating temperature	TOP	-30	+90	°C

**Note:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

## Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13455-31 are provided in Table 2. Electrical specifications are provided in Tables 3, 4, and 5. Figure 3 shows a timing diagram for the SKY13455-31.

IMD2 and IMD3 test conditions for various frequencies are listed in Tables 6 and 7, respectively.

Figure 4 illustrates the test setup used to measure intermodulation products. This industry standardized test is used to simulate the WCDMA Band 1 linearity of the antenna switch. A +20 dBm Continuous Wave (CW) signal,  $f_{\text{FUND}}$ , is sequentially applied to the TRX1 through TRX10 ports, while a -15 dBm CW blocker signal,  $f_{\text{BLK}}$ , is applied to the ANT port.

The resulting 3<sup>rd</sup> Order Intermodulation Distortion (IMD3),  $f_{\text{RX}}$ , is measured over all phases of  $f_{\text{FUND}}$ . The SKY13455-31 exhibits exceptional performance for all TRXx ports.

Table 8 describes the register content and programming read/write sequences. Refer to the *MIPI Alliance Specification for RF Front-End Control Interface (RFFE)*, v1.10 (26 July 2011) for additional information on MIPI programming sequences and MIPI bus specifications.

Figures 5 and 6 provide the timing diagrams for register write commands and read commands, respectively.

Table 9 provides the Register\_0 logic. Table 10 describes the register parameters and bit values.

**Table 3. SKY13455-31 Electrical Specifications (Note 1) (1 of 4)**  
**(V<sub>DD</sub> = 2.85 V, T<sub>OP</sub> = +25 °C, Characteristic Impedance [Z<sub>0</sub>] = 50 Ω, Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
<b>RF Specifications</b>						
Insertion loss:	IL					
TXLB		824 to 915 MHz, +35 dBm		1.25	1.45	dB
TXHB		1710 to 1910 MHz, +33 dBm		1.15	1.35	dB
TRX1/2/4		704 to 787 MHz, +25 dBm		0.55	0.70	dB
TRX3/5 to 10		704 to 787 MHz, +25 dBm		0.65	0.80	dB
TRX1/2/3		824 to 960 MHz, +25 dBm		0.60	0.75	dB
TRX4/5/6/7		824 to 960 MHz, +25 dBm		0.70	0.85	dB
TRX8/9/10		824 to 960 MHz, +25 dBm		0.60	0.75	dB
TRX1/2/3		1710 to 1990 Mhz, +25 dBm		0.70	0.85	dB
TRX4/5/6/7		1710 to 1990 Mhz, +25 dBm		0.70	0.85	dB
TRX8/9/10		1710 to 1990 Mhz, +25 dBm		0.70	0.85	dB
TRX1/2/3		2110 to 2170 MHz, +25 dBm		0.70	0.85	dB
TRX4/5/6/7		2110 to 2170 MHz, +25 dBm		0.70	0.85	dB
TRX8,9,10		2110 to 2170 MHz, +25 dBm		0.70	0.85	dB
TRX1/2/3		2300 to 2690 MHz, +25 dBm		0.75	0.90	dB
TRX4/5/6		2300 to 2690 MHz, +25 dBm		0.95	1.10	dB
TRX7		2300 to 2690 MHz, +25 dBm		1.10	1.30	dB
TRX8/9/10		2300 to 2690 MHz, +25 dBm		0.75	0.95	dB

**Table 3. SKY13455-31 Electrical Specifications (Note 1) (2 of 4)**

Register		Parameter	Description	Default (Binary)
Name	Address (Hex)			
Register_0	0000	MODE_CTRL	Bits[7:0]: Switch control. See Table 8 for logic	–
RFFE_STATUS	001A	SOFTWARE RESET	Bit[7]: Resets all data to default values except for USID, GSID, or the contents of the PM_TRIG Register. 0 = Normal operation 1 = Software reset	0
		COMMAND_FRAME_PARITY_ERR	Bit[6]: Command sequence received with parity error – discard command.	0
		COMMAND_LENGTH_ERR	Bit[5]: Command length error.	0
		ADDRESS_FRAME_PARITY_ERR	Bit[4]: Address frame parity error = 1.	0
		DATA_FRAME_PARITY_ERR	Bit[3]: Data frame with parity error.	0
		READ_UNUSED_REG	Bit[2]: Read command to an invalid address.	0
		WRITE_UNUSED_REG	Bit[1]: Write command to an invalid address.	0
		BID_GID_ERR	Bit[0]: Read command with a BROADCAST_ID (refer to the <i>MIPI Alliance Specification</i> ) or GSID.	0
GROUP_SID	001B	Reserved	Bits[7:4]: Reserved	0000
		GSID	Bits[3:0]: Group slave ID	0000

**Table 10. Register Description and Programming (2 of 2)**

Register		Parameter	Description	Default (Binary)
Name	Address (Hex)			
PM_TRIG (Note 1)	001C	PWR_MODE	Bits[7:6]: 00 = Normal operation (active) 01 = Default settings (startup) 10 = Low power (low power) 11 = Reserved	00
		Trigger_Mask_2	Bit[5]: If this bit is set, trigger 2 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 2, the data goes directly to the destination register.	0
		Trigger_Mask_1	Bit[4]: If this bit is set, trigger 1 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 1, the data goes directly to the destination register.	0
		Trigger_Mask_0	Bit[3]: If this bit is set, trigger 0 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 0, the data goes directly to the destination register.	0
		Trigger_2	Bit[2]: If this bit is set, data is loaded into the trigger 2 registers.	0
		Trigger_1	Bit[1]: If this bit is set, data is loaded into the trigger 1 registers (unsupported).	0
		Trigger_0	Bit[0]: If this bit is set, data is loaded into the trigger 0 registers (unsupported).	0
PRODUCT_ID	001D	PRODUCT_ID	Bits[7:0]: This is a read-only register. However, during the programming of the Unique Slave Identifier (USID), a write command sequence is performed on this register but the value is not changed.	01000001
MANUFACTURER_ID	001E	MANUFACTURER_ID	Bits[7:0]: Read-only register	10100101
MAN_USID	001F	Reserved	Bits[7:6]: Reserved	00
		MANUFACTURER_ID	Bits[5:4]: Read-only register	01
		USID	Bits[3:0]: Programmable USID. A write to these bits programs the USID.	1011

**Note 1:** Unlike the complete independence between triggers 0, 1, and 2, and also between the associated trigger masks 0, 1, and 2, respectively, as described in the MIPI RFFE Specification, this device uses additional interactions between the provided trigger functions.

The delayed application of updated data to all triggerable registers in this device can be accomplished using any of the three triggers (0, 1, or 2), provided that the particular trigger used is not currently masked off. If multiple triggers are enabled, any or all of those are sufficient to cause the data to be transferred from shadow registers to destination registers for all triggerable registers in the device.

It is also necessary to disable all three triggers (i.e., set all three trigger masks) to ensure that data written to any triggerable register is immediately written to the destination register at the conclusion of the RFFE command sequence where the data is written.

### Evaluation Board Description

The SKY13455-31 Evaluation Board is used to test the performance of the SKY13455-31 SP12T Switch. An Evaluation Board schematic diagram is provided in Figure 7. A recommended ESD protection circuit diagram is provided in Figure 8. An assembly drawing for the Evaluation Board is shown in Figure 9.

### Package Dimensions

The PCB layout footprint for the SKY13455-31 is provided in Figure 10. Typical case markings are shown in Figure 11. Package dimensions for the 22-pin MCM are shown in Figure 12, and tape and reel dimensions are provided in Figure 13.

### Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13455-31 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

**Figure 12. SKY13455-31 22-Pin MCM Package Dimensions**

Notes:

1. Carrier tape: black conductive polycarbonate.
2. Cover tape material: transparent conductive material.
3. ESD-surface resistivity is  $\leq 1 \times 10^{10}$  Ohms/square per EIA, JEDEC TNR Specification.
4. 10 sprocket hole pitch cumulative tolerance:  $\pm 0.20$  mm
5.  $A_0$  and  $B_0$  measured on plane 0.30 mm above the bottom of the pocket.
6. All measurements are in millimeters.
