ASGTX-Eval

Moisture Sensitivity Level – N/A (Ph)

**RoHS/RoHS II compliant** 

### **DESCRIPTION:**

ASGTX Evaluation boards are designed to facilitate engineering evaluation of the ASGTX series of high frequency VCTCXO's. These boards are pre-configured to test the ASGTX oscillator with an LVDS output. As shown in section-6 (schematic), R8 is pre-populated with a  $100\Omega$  resistor.

Further, to complete the path to the SMA output connectors, R3 & R6 are populated with  $0\Omega$  resistors. To test the LVCMOS output, simply remove R8 and monitor the output at OUT SMA Connector. To test the LVPECL output, simply remove R8, and solder down the following resistors as a function of the supply voltage, VDD.

| VDD  | R2    | R4     | R5    | <b>R</b> 7 |
|------|-------|--------|-------|------------|
| 3.3V | 133Ω  | 82Ω    | 133Ω  | 82Ω        |
| 2.5V | 250 Ω | 62.5 Ω | 250 Ω | 62.5 Ω     |

ATTENTION: Abracon Corporation's products are COTS – Commercial-Off-The-Shelf products; suitable for Commercial, Industrial and, where designated, Automotive Applications. Abracon's products are not specifically designed for Military, Aviation, Aerospace, Life-dependant Medical applications or any application requiring high reliability where component failure could result in loss of life and/or property. For applications requiring high reliability and/or presenting an extreme operating environment, written consent and authorization from Abracon Corporation is required. Please contact Abracon Corporation for more information.
