

## DATA SHEET

# SE2611T: 2.4 GHz High Efficiency Wireless LAN/BT Front End

## Applications

- IEEE 802.11b DSSS WLAN
- IEEE 802.11g/n OFDM WLAN
- Embedded applications with Bluetooth® (Mobile)

## Features

- Dual mode IEEE802.11b & IEEE802.11g
- Integrated PA, harmonic filter, LNA and BT port
- Integrated positive slope power detector
- 19 dBm @ 4.0 % EVM, 802.11g, 54 Mbps
- Simultaneous WLAN and Bluetooth receive mode
- Direct connection to battery with 3.3 V nominal supply
- Lead-free, halogen-free, ROHS compliant QFN (20-pin, 3 × 3 × 0.6 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

## Description

The SE2611T is a complete 802.11 b/g/n WLAN RF front-end module with a Bluetooth port. The device provides all the functionality of the power amplifier, power detector, filter, switch, Low Noise Amplifier (LNA), 2170 MHz notch filtering and associated matching. The SE2611T provides a complete 2.4 GHz WLAN RF solution from the output of the transceiver to the antennas, and from the antennas to the input of the transceiver, in an ultra-compact form factor.

The SE2611T is designed for ease of use, with all the critical matching and harmonic filtering integrated, also offering a simple 50 Ω interface to the antenna.

The SE2611T includes a low noise amplifier to increase the receive sensitivity of embedded solutions to improve range or to overcome the insertion loss of cellular filters often included for mobile applications. It offers simultaneous WLAN and Bluetooth receive mode.

The SE2611T also includes a transmitter power detector with 20 dB of dynamic range and a digital enable control for transmitter power ramp on/off control. The power ramp rise/fall time is 0.5 μs typical.

The device package and pinout for the 20-pin QFN are shown in Figure 1. A block diagram of the SE2611T is shown in Figure 2.

## Electrical and Mechanical Specifications

Signal pin assignments and functional pin descriptions are described in Table 1. The absolute maximum ratings of the

SE2611T are provided in Table 2. Recommended operating conditions are specified in Table 3. Electrical specifications are provided in Tables 4 through 10, and Figure 3.

Electrostatic discharge: Human Body Model (HBM), Class 1C	ESD		1000	V

**Note 1:** Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

**CAUTION:** Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

## Package Dimensions

The PCB layout footprint for the SE2611T is provided in Figure 4. Typical case markings are shown in Figure 5. Package dimensions for the 20-pin QFN are shown in Figure 6, and carrier tape dimensions are provided in Figure 7.

## Package and Handling Information

Because of its sensitivity to moisture absorption, instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SE2611T is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It is capable of withstanding a Pb-free solder reflow. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. If the part is manually attached, precaution should be taken to insure that the device is not subjected to temperatures above its rated peak temperature for an extended period of time. For details on both attachment techniques, precautions, and handling procedures recommended by Skyworks, please refer to the following Skyworks Application Notes:

- *QFN Solder Reflow and Rework Information Application Note*, document number QAD-00045.
- *Handling, Packing, Shipping and Use of Moisture Sensitive QFN Application Note*, document number QAD-00044.

Production quantities of this product are shipped in a standard tape and reel format.

**Notes:**

1. All dimensions are in millimeters.
2. Dimensions and tolerances according to ASME Y14.5M-1994.
3. Unless specified, dimensions are symmetrical about center lines.
4. Via hole recommendations: 0.025 mm Cu via wall plating (minimum), via hole to be filled with conductive paste and plated over.
5. Stencil recommendations: 0.10 mm stencil thickness, laser cut apertures, trapezoidal walls and rounded corners offer better paste release.
6. Solder mask recommendations: contact board fabricator for recommended solder mask offset and tolerance.

Notes:

1. All measurements are in millimeters.
2. Dimensions and tolerances according to ASME Y14.5M-1994.
3. Unless otherwise specified, the following values apply:  
Decimal Tolerance:  $\pm 0.1$  mm  
Angular Tolerance:  $\pm 1/2^\circ$   
X.X (1 place)  $\pm 0.1$  mm  
X.XX (2 places)  $\pm 0.05$  mm  
X.XXX (3 places)  $\pm 0.025$  mm
4. Coplanarity applies to the terminals as well as all other bottom surface metalization.
5. Dimension applies to metallized terminal. If terminal tip has a radius, dimension should not be measured in that radius area.
6. Unless specified, dimensions are symmetrical about center lines.
