

Product Overview

The QPC6222 is a dual-pole double-throw transfer switch designed for general purpose switching applications where RF port transfer (port swapping) control is needed. The low insertion loss along with excellent linearity performance makes the QPC6222 ideal for multi-mode GSM, EDGE, UMTS, and LTE applications.

The RF ports can be directly connected in 50Ω systems and control logic is compatible with +1.3V to +2.7V systems. The supply voltage is intended for connection to +2.8V systems but the device is operable from +2.4V to +3.5V.

The standard 12-pin QFN package and compact 2.0 mm x 2.0 mm size offers designers a compact, easy-to-use, switch component for quick integration into multimode, multi-band systems.

Control Logic

Logic State	Description	V _{DD}	CTL1
Off	Off or Standby - low current state	0V	Low
RF1-RF4, RF2-RF3	RF1 connected to RF4 and RF2 connected to RF3	"V _{DD} "	Low
RF1-RF3, RF2-RF4	RF1 connected to RF3 and RF2 connected to RF4	"V _{DD} "	High

NOTE: The switch is in the Off or Standby state only when the V_{DD} supply is low. The RF performance is undefined in the Off state.

Power ON and OFF sequence

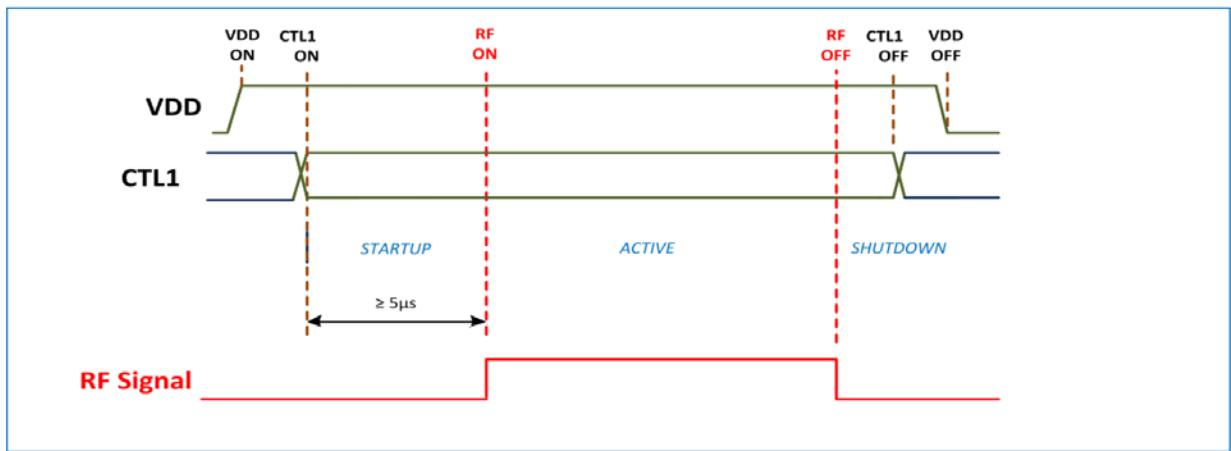

It is very important that the user adheres to the correct power-on/off sequence in order to avoid damaging the device. First apply V_{DD} before applying a high to CTL1.

Power ON –

- 1) Apply voltage supply - V_{DD}
- 2) Apply logic signals - CTL1
- 3) Wait 5 μs or greater after CTL1 are stable and then apply the RF Signal

Power OFF –

- 1) Remove the RF Signal
- 2) Remove logic signals - CTL1
- 3) Remove voltage supply - V_{DD}

Performance Plots

Test conditions unless otherwise noted: $V_{DD} = +2.8V$
