(DIP-8/DMP-8)

There is stray capacity assembled on PC board, and so select Rx, Cx to the value which pin 2 voltage (search voltage at VCO locked) becomes about 2V. Cx>5pF, 5.6k>Rx>3.3kΩ.

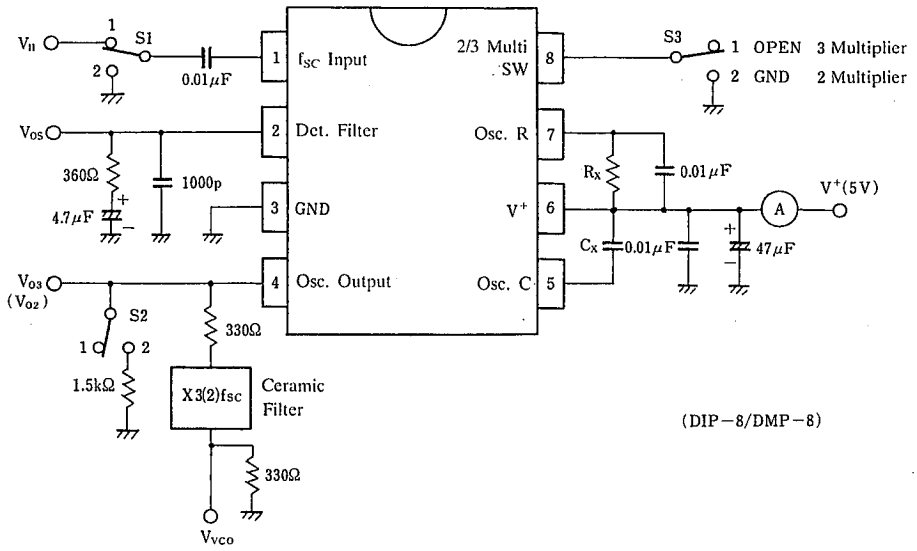
■ TEST CIRCUIT



(note 1): Rx, Cx accuracy: less than ±1%.

(note 2): Cx is not considered pin 5 stray capacitance. VCO free-run frequency is affected by stray capacitance of P.C board, socket and others.

(note 3): The NJM2228 is produced by high frequency wafer process and some of pin may be weak against surge voltage.

(note 4): Pin 2 filter must be connected to ground.
