

SNx5LBC184 Differential Transceiver With Transient Voltage Suppression

1 Features

- Integrated Transient Voltage Suppression
- ESD Protection for Bus Terminals Exceeds:
±30 kV IEC 61000-4-2, Contact Discharge
±15 kV IEC 61000-4-2, Air-Gap Discharge
±15 kV EIA/JEDEC Human Body Model
- Circuit Damage Protection of 400-W Peak
(Typical) Per IEC 61000-4-5
- Controlled Driver Output-Voltage Slew Rates
Allow Longer Cable Stub Lengths
- 250-kbps in Electrically Noisy Environments
- Open-Circuit Fail-Safe Receiver Design
- 1/4 Unit Load Allows for 128 Devices Connected
on Bus
- Thermal Shutdown Protection
- Power-Up and Power-Down Glitch Protection
- Each Transceiver Meets or Exceeds the
Requirements of TIA/EIA-485 (RS-485) and
ISO/IEC 8482:1993(E) Standards
- Low Disabled Supply Current 300 μ A Maximum
- Pin Compatible With SN75176

2 Applications

- Industrial Networks
- Utility Meters
- Motor Control

3 Description

The SN75LBC184 and SN65LBC184 devices are differential data line transceivers in the trade-standard footprint of the SN75176 with built-in protection against high-energy noise transients. This feature provides a substantial increase in reliability for better immunity to noise transients coupled to the data cable over most existing devices. Use of these circuits provides a reliable low-cost direct-coupled (with no isolation transformer) data line interface without requiring any external components.

The SN75LBC184 and SN65LBC184 can withstand overvoltage transients of 400-W peak (typical). The conventional combination wave called out in IEC 61000-4-5 simulates the overvoltage transient and models a unidirectional surge caused by overvoltages from switching and secondary lightning transients.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN65LBC184, SN75LBC184	SOIC (8)	4.90 mm x 3.91 mm
	PDIP (8)	9.81 mm x 6.35 mm

(1) For all available packages, see the orderable addendum at the end of the datasheet.

Logic Symbol

NOTE: This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
A	6	Bus input/output	Driver output or receiver input (complementary to B)
B	7	Bus input/output	Driver output or receiver input (complementary to A)
D	4	Digital input	Driver data input
DE	3	Digital input	Active-HIGH driver enable
GND	5	Reference potential	Local device ground
R	1	Digital output	Receiver data output
\overline{RE}	2	Digital input	Active-LOW receiver enable
V_{CC}	8	Supply	4.75-V to 5.25-V supply

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		MIN	MAX	UNIT
V_{CC}	Supply voltage ⁽²⁾	–0.5	7	V
	Continuous voltage range at any bus terminal	–15	15	V
	Data input/output voltage	–0.3	7	V
I_O	Receiver output current	–20	20	mA
	Continuous total power dissipation ⁽³⁾	Internally Limited		
T_{stg}	Storage temperature		160	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential input/output bus voltage, are with respect to network ground terminal.
- (3) The driver shuts down at a junction temperature of approximately 160°C. To operate below this temperature, see the *Dissipation Ratings*.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	A, B, GND	±15000
			All pins	±3000
		Contact discharge (IEC61000-4-2)	A, B, GND ⁽²⁾	±30000
		Air discharge (IEC61000-4-2)	A, B, GND ⁽³⁾	±15000
		All pins (Class 3A)		±8000
		All pins (Class 3B)		±200

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) GND and bus pin ESD protection is beyond readily available test equipment capabilities for IEC 61000-4-2, EIA/JEDEC test method A114-A and MIL-STD-883C method 3015. Ratings listed are limits of test equipment; device performance exceeds these limits.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN ⁽¹⁾	TYP	MAX	UNIT
V _{CC}	Supply voltage		4.75	5	5.25	V
V _I or V _{IC}	Voltage at any bus terminal (separately or common mode)		–7		12	V
V _{IH}	High-level input voltage	D, DE, and \overline{RE}	2			V
V _{IL}	Low-level input voltage	D, DE, and \overline{RE}			0.8	V
V _{ID}	Differential input voltage				12	V
I _{OH}	High-level output current	Driver	–60			mA
		Receiver	–8			
I _{OL}	Low-level output current	Driver			60	mA
		Receiver			4	
T _A	Operating free-air temperature	SN75LBC184	0		70	°C
		SN65LBC184	–40		85	

(1) The algebraic convention, in which the less-positive (more-negative) limit is designated minimum, is used in this data sheet.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		SNx5LBC184		UNIT
		P [PDIP]	D [SOIC]	
		8 PINS		
R _{θJA}	Junction-to-ambient thermal resistance	108.7	172.4	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	34.8	42.5	°C/W
R _{θJB}	Junction-to-board thermal resistance	23.6	41.4	°C/W
ψ _{JT}	Junction-to-top characterization parameter	12	4.6	°C/W
ψ _{JB}	Junction-to-board characterization parameter	23.5	40.7	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Electrical Characteristics: Driver

over recommended operating conditions (unless otherwise noted)

PARAMETER	ALTERNATE SYMBOLS	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
I_{CC} Supply current	NA	$DE = \overline{RE} = 5\text{ V}$ No Load		12	25	mA
		$\overline{DE} = 0\text{ V}$ $RE = 5\text{ V}$ No Load		175	300	μA
I_{IH} High-level input current (D, DE, RE)	NA	$V_I = 2.4\text{ V}$			50	μA
I_{IL} Low-level input current (D, DE, RE)	NA	$V_I = 0.4\text{ V}$	–50			μA
I_{OS} Short-circuit output current OS ⁽²⁾	NA	$V_O = -7\text{ V}$	–250	–120		mA
		$V_O = V_{CC}$			250	
		$V_O = 12\text{ V}$			250	
I_{OZ} High-impedance output current	NA	See Receiver I_I				mA
V_O Output voltage	V_{Oa}, V_{Ob}	$I_O = 0$	0		V_{CC}	V
$V_{OC(PP)}$ Peak-to-peak change in common-mode output voltage during state transitions	NA	See Figure 9 and Figure 10		0.8		V
V_{OC} Common-mode output voltage	$ V_{OS} $	See Figure 8	1		3	V
$ \Delta V_{OC(SS)} $ Magnitude of change, common-mode steady-state output voltage	$ V_{OS} - V_{OS} $	See Figure 10			0.1	V
$ V_{OD} $ Magnitude of differential output voltage $ V_A - V_B $	V_O	$I_O = 0$	1.5		6	V
		$R_L = 54\ \Omega$, See Figure 8	1.5			V
$\Delta V_{OD} $ Change in differential voltage magnitude between logic states	$ V_{I1} - V_{I1} $	$R_L = 54\ \Omega$			0.1	V

(1) All typical values are measured with $T_A = 25^\circ\text{C}$ and $V_{CC} = 5\text{ V}$.

(2) This parameter is measured with only one output being driven at a time.

6.6 Electrical Characteristics: Receiver

over recommended operation conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
I_{CC} Supply current (total package)	$DE = \overline{RE} = 0\text{ V}$, No Load			3.9	mA

8 Detailed Description

8.1 Overview

The SNx5LBC184 device is a 5-V, half-duplex, RS-485 transceiver with integrated transient voltage suppressors that prevent circuit damage in the presence of high-energy transients of up to 400-W peak power. This transceiver has an active-HIGH driver enable and active-LOW receiver enable. The differential driver is suitable for data transmission up to 250 kbps.

8.2 Functional Block Diagram

Figure 13. Functional Logic Diagram

8.3 Feature Description

Integrated transient voltage suppressors protect the transceiver against Electrostatic Discharges (ESD) according to IEC 61000-4-2 of up to ± 30 kV and surge transients according to IEC 61000-4-5 of up to 400-W peak.

The differential driver incorporates slew-rate controlled outputs sufficient to transmit data up to 250 kbps. Slew-rate control allows for longer unterminated cable runs and longer stub lengths from the main cable trunk than with faster voltage transitions. A unique receiver design provides a high level failsafe output when the inputs are left floating.

The SN65LBC184 is characterized from -40°C to 85°C and the SN75LBC184 is characterized from 0°C to 70°C .

8.4 Device Functional Modes

When the driver enable pin (DE) is logic high, the differential outputs A and B follow the logic states at data input D. A logic high at D causes A to turn high and B to turn low. In this case, the differential output voltage defined as $V_{OD} = V_A - V_B$ is positive. When D is low, the output states reverse, B turns high, A becomes low, and V_{OD} is negative.

When DE is low, both outputs turn high-impedance. In this condition, the logic state at D is irrelevant.

Table 1. Driver Functions⁽¹⁾

INPUT	ENABLE	OUTPUTS		FUNCTION
D	DE	A	B	
H	H	H	L	Actively drive bus High
L	H	L	H	Actively drive bus Low
X	L	Z	Z	Driver disabled

(1) H = high level, L = low level, ? = indeterminate, X = irrelevant, Z = high impedance (off)

When the receiver enable pin, \overline{RE} , is logic low, the receiver is enabled. When the differential input voltage defined as $V_{ID} = V_A - V_B$ is positive and higher than the positive input threshold, V_{IT+} , the receiver output (R) turns high. When V_{ID} is negative and lower than the negative input threshold, V_{IT-} , the receiver output turns low. If V_{ID} is between V_{IT+} and V_{IT-} , the output is indeterminate.

When \overline{RE} is logic high, the receiver output is high-impedance and the magnitude and polarity of V_{ID} are irrelevant. When the transceiver is disconnected from the bus, the receiver provides a failsafe high output.

Table 2. Receiver Functions⁽¹⁾

DIFFERENTIAL INPUT	ENABLE	OUTPUT	FUNCTION
$V_{ID} = V_A - V_B$	\overline{RE}	R	
$V_{ID} > V_{IT+}$	L	H	Receive valid bus High
$V_{IT-} < V_{ID} < V_{IT+}$	L	?	Indeterminate bus state
$V_{ID} < V_{IT-}$	L	L	Receive valid bus Low
X	H	Z	Receiver disabled
OPEN	L	H	Receiver failsafe High

(1) H = high level, L = low level, ? = indeterminate, X = irrelevant, Z = high impedance (off)

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SN65LBC184 and SN75LBC184 devices are half-duplex, RS-485 transceivers commonly used for asynchronous data transmissions. The driver and receiver enable pins allow for the configuration of different operating modes.

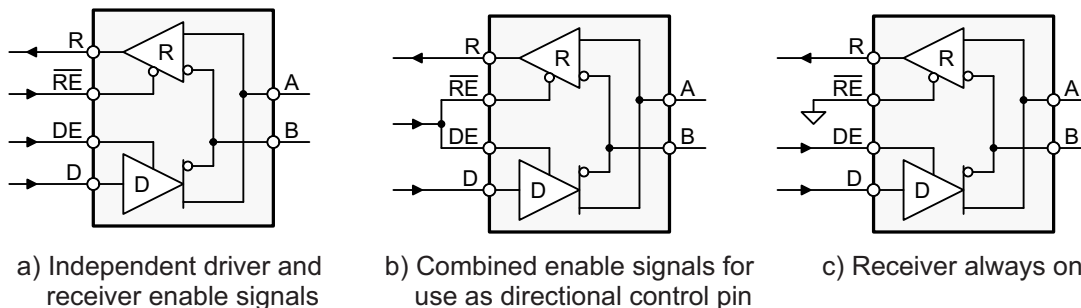

Figure 15. Half-Duplex Transceiver Configurations

- Using independent enable lines provides the most flexible control as it allows for the driver and the receiver to be turned on and off individually. While this configuration requires two control lines, it allows for selective listening into the bus traffic, whether the driver is transmitting data or not.
- Combining the enable signals simplifies the interface to the controller by forming a single direction-control signal. In this configuration, the transceiver operates as a driver when the direction-control line is high, and as a receiver when the direction-control line is low.
- Only one line is required when connecting the receiver-enable input to ground and controlling only the driver-enable input. In this configuration, a node not only receives the data from the bus, but also the data it sends and can verify that the correct data have been transmitted.

9.2 Typical Application

An RS-485 bus consists of multiple transceivers connected in parallel to a bus cable. To eliminate line reflections, each cable end is terminated with a termination resistor, R_T , whose value matches the characteristic impedance, Z_0 , of the cable. This method, known as parallel termination, allows for higher data rates over a longer cable length.

Typical Application (continued)

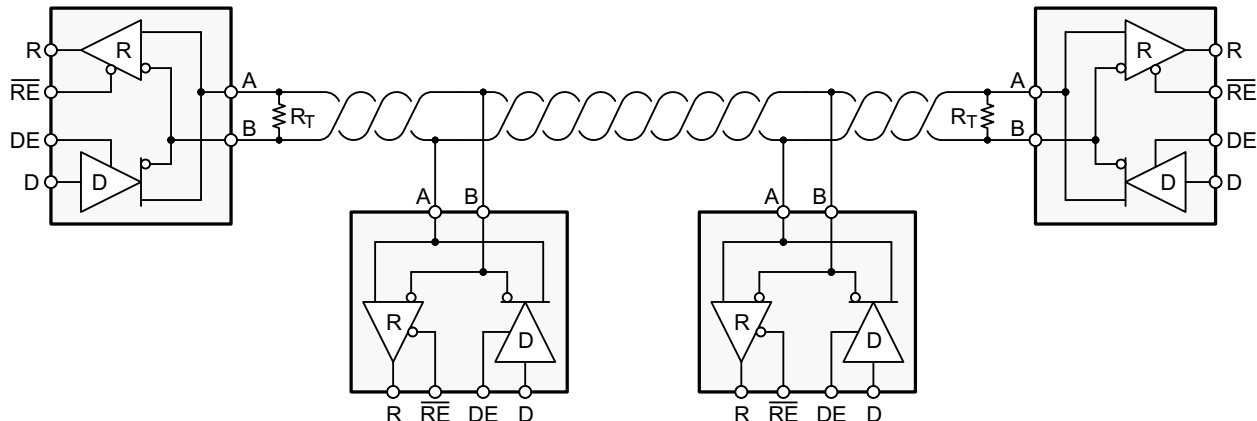

Figure 16. Typical RS-485 Network With Half-Duplex Transceivers

9.2.1 Design Requirements

RS-485 is a robust electrical standard suitable for long-distance networking that may be used in a wide range of applications with varying requirements, such as distance, data rate, and number of nodes.

9.2.1.1 Data Rate and Bus Length

There is an inverse relationship between data rate and bus length, meaning the higher the data rate, the shorter the cable length; and conversely, the lower the data rate, the longer the cable may be without introducing data errors. While most RS-485 systems use data rates between 10 kbps and 100 kbps, some applications require data rates up to 250 kbps at distances of 4000 feet and longer. Longer distances are possible by allowing for small signal jitter of up to 5 or 10%.

Figure 17. Cable Length vs Data Rate Characteristic

Typical Application (continued)

9.2.1.2 Stub Length

When connecting a node to the bus, the distance between the transceiver inputs and the cable trunk, known as the stub, should be as short as possible. Stubs present a nonterminated piece of bus line which can introduce reflections as the length of the stub increases. As a general guideline, the electrical length, or round-trip delay, of a stub should be less than one-tenth of the rise time of the driver, thus giving a maximum physical stub length as shown in Equation 1.

$$L_{(\text{STUB})} \leq 0.1 \times t_r \times v \times c$$

where

- t_r is the 10/90 rise time of the driver
 - v is the signal velocity of the cable or trace as a factor of c
 - c is the speed of light (3×10^8 m/s)
- (1)

Per Equation 1, cable-stub lengths when using the SN65LBC184 driver must be not greater than 5.85 meters (19 feet) for a signal velocity of 78% and minimum driver output rise or fall time of 250 ns.

9.2.1.3 Bus Loading

The RS-485 standard specifies that a compliant driver must be able to driver 32 unit loads (UL), where 1 unit load represents a load impedance of approximately 12 kΩ. Because the SN65LBC184 is a 1/4 UL transceiver, it is possible to connect up to 128 receivers to the bus.

9.2.2 Detailed Design Procedure

9.2.2.1 SN65LBC184 Test Description

The SN65LBC184 is tested against the IEC 61000-4-5 recommended transient identified as the combination wave. The combination wave provides a 1.2-/50-μs open-circuit voltage waveform and a 8-/20-μs short-circuit current waveform shown in Figure 18. The testing is performed with a combination/hybrid pulse generator with an effective output impedance of 2 Ω. The setup for the overvoltage stress is shown in Figure 19 with all testing performed with power applied to the SN65LBC184 circuit.

Figure 18. Open-Circuit Voltage and Short-Circuit Current Waveforms

The SN65LBC184 is tested and evaluated for both maximum (single pulse) as well as life test (multiple pulse) capabilities. The SN65LBC184 is evaluated against transients of both positive and negative polarity and all testing is performed with the worst-case transient polarity. Transient pulses are applied to the bus pins (A and B) across ground as shown in Figure 19.

Typical Application (continued)

Figure 19. Overvoltage Stress Test Circuit

9.2.3 Application Curve

An example waveform as seen by the SN65LBC184 is shown in [Figure 20](#). The bottom trace is current, the middle trace shows the clamping voltage of the device and the top trace is power as calculated from the voltage and current waveforms. This example shows a peak clamping voltage of 33.6 V and peak current of 16 A, thus yielding an absorbed peak power of 538 W.

Figure 20. Typical Surge Waveform Measured at Pins 5 and 7

10 Power Supply Recommendations

To assure reliable operation at all data rates and supply voltages, each supply should be buffered with a 100-nF ceramic capacitor located as close to the supply pins as possible. The TPS76350 is a linear voltage regulator suitable for the 5-V supply.

11 Layout

11.1 Layout Guidelines

Because ESD transients have a wide frequency bandwidth from approximately 3 MHz to 3 GHz, high-frequency layout techniques must be applied during PCB design.

- Use V_{CC} and ground planes to provide low inductance. High frequency currents follow the path of least inductance and not the path of least impedance.
- Apply 100-nF to 220-nF bypass capacitors as close as possible to the V_{CC} pins of transceiver, UART, or controller ICs on the board.
- Use at least two vias for V_{CC} and ground connections of bypass capacitors to minimize effective via-inductance.
- Use 1-k Ω to 10-k Ω pullup or pulldown resistors for enable lines to limit noise currents in these lines during transient events.

11.2 Layout Example

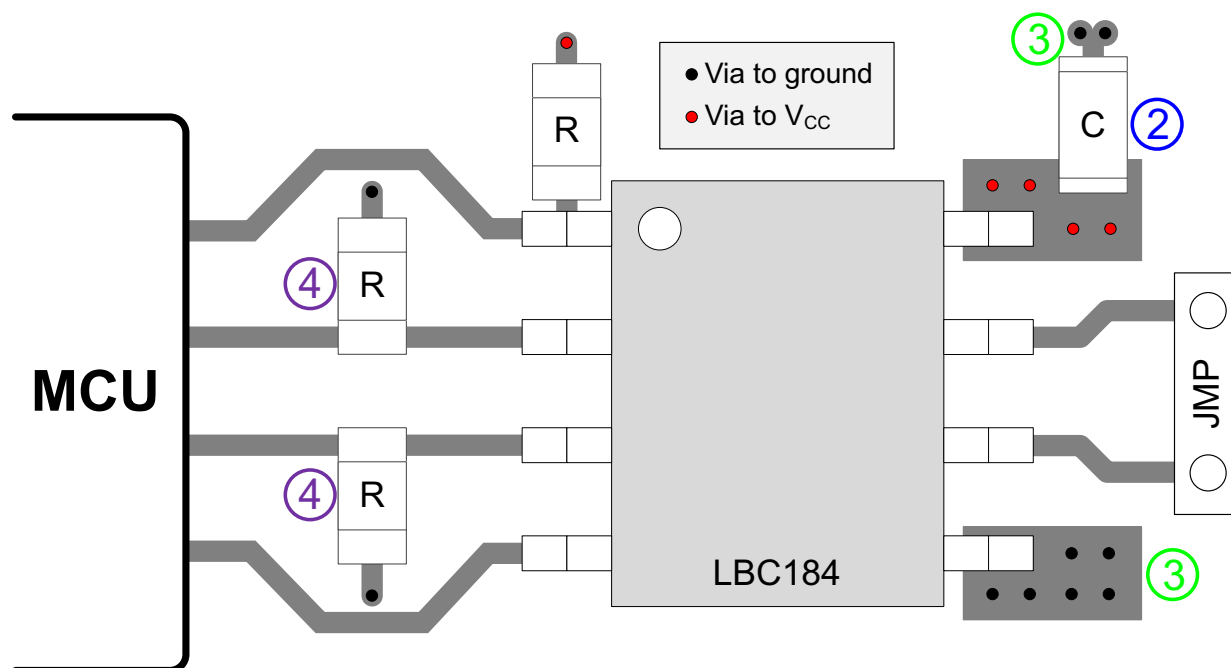

Figure 21. Layout Schematic

SN75LBC184DR	ACTIVE	SOIC	D	8	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	0 to 70	7LB184	Samples
SN75LBC184DRG4	ACTIVE	SOIC	D	8	2500	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	0 to 70	7LB184	Samples
SN75LBC184P	ACTIVE	PDIP	P	8	50	Pb-Free (RoHS)	CU NIPDAU	N / A for Pkg Type	0 to 70	75LBC184	Samples
SN75LBC184PE4	ACTIVE	PDIP	P	8	50	Pb-Free (RoHS)	CU NIPDAU	N / A for Pkg Type	0 to 70	75LBC184	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
SN65LBC184DR	SOIC	D	8	2500	330.0	12.4	6.4	5.2	2.1	8.0	12.0	Q1
SN75LBC184DR	SOIC	D	8	2500	330.0	12.4	6.4	5.2	2.1	8.0	12.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
SN65LBC184DR	SOIC	D	8	2500	340.5	338.1	20.6

P (R-PDIP-T8)

PLASTIC DUAL-IN-LINE PACKAGE

- NOTES:
- A. All linear dimensions are in inches (millimeters).
 - B. This drawing is subject to change without notice.
 - C. Falls within JEDEC MS-001 variation BA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- $\triangle C$ Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- $\triangle D$ Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AA.

D (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
