

DESCRIPTION

The IS31FL3745 is a general purpose 18xn (n=1~8) LED Matrix programmed via 1MHz I2C compatible interface. Each LED can be dimmed individually with 8-bit PWM data and 8-bit DC scaling data which allowing 256 steps of linear PWM dimming and 256 steps of DC current adjustable level.

Additionally each LED open and short state can be detected, IS31FL3745 store the open or short information in Open-Short Registers. The Open-Short Registers allowing MCU to read out via I2C compatible interface. Inform MCU whether there are LEDs open or short and the locations of open or short LEDs.

FEATURES

- Supply voltage range: 2.7V to 5.5V
- 18 Current sink (Maximum)
- Support 18 x n (n=1~8) LED matrix configurations
- Individual 256 PWM control steps
- Individual 256 DC current steps
- Global 256 current setting
- SDB rising edge reset I2C module
- Programmable H/L logic:1.4/0.4, 2.4/0.6
- 29kHz PWM frequency
- State lookup registers
- Individual open and short error detect function
- 180 degree phase delay operation to reduce power noise
- De-Ghost
- Cascade for synchronization of chips

QUICK START

Figure 1: Photo of IS31FL3745-CLS4 Evaluation Board

RECOMMENDED EQUIPMENT

- 5.0V, 2A power supply

ABSOLUTE MAXIMUM RATINGS

- ≤ 5.5V power supply

Caution: Do not exceed the conditions listed above, otherwise the board will be damaged.

PROCEDURE

The IS31FL3745 evaluation board is fully assembled and tested. Follow the steps listed below to verify board operation.

Caution: Do not turn on the power supply until all connections are completed.

- 1) Short JP1 (OPEN=EXT CTRL) to enable the control of on board MCU (default status).
- 2) Connect the 5V DC power to VCC / GND in CON4, or plug in the USB power input to micro-USB (CON5).
- 3) Turn on the power supply, pay attention to the supply current. If the current exceeds 1A, please check for circuit fault.

EVALUATION BOARD OPERATION

The IS31FL3745 evaluation board has six display modes. Press MODE button to switch configurations.

- 1) (Default mode) Rainbow #1.
- 2) Rainbow #2.
- 3) Purple breath.
- 4) Change colors.
- 5) White.

Note: IS31FL3745 solely controls the FxLED function on the evaluation board.

ORDERING INFORMATION

Part No.	Temperature Range	Package
IS31FL3745-CLS4-EB	-40°C to +125°C (Industrial)	WLCSP-36, Lead-free

Table 1: Ordering Information

For pricing, delivery, and ordering information, please contacts ISSI's analog marketing team at analog@issi.com or (408) 969-6600

SOFTWARE SUPPORT

EXT CTRL (JP1) default setting is close circuit. If it is set to open, the on-board MCU will configure the I2C pins and SDB pin to High Impedance and sleep. External I2C and SDB signals can be connected to TP4 to control the IS31FL3745 LED driver.

Figure 2: Photo of Arduino UNO connected to Evaluation Board

The steps listed below are an example using the Arduino for external control.

The Arduino hardware consists of an Atmel microcontroller with a bootloader allowing quick firmware updates. First download the latest Arduino Integrated Development Environment IDE (1.6.12 or greater) from www.arduino.cc/en/Main/Software. Also download the Wire.h library from www.arduino.cc/en/reference/wire and verify that pgmspace.h is in the directory ...program Files(x86)/Arduino/hardware/tools/avr/avr/include/avr/. Then download the latest IS31FL3745 test firmware (sketch) from the ISSI website <http://ams.issi.com/US/product-analog-fxled-driver.shtml>.

- 1) Open EXT CTRL (JP1).
- 2) Connect the 5 pins from Arduino board to IS31FL3745 EVB:
 - a) Arduino 5V pin to IS31FL3745 EVB VCC.
 - b) Arduino GND to IS31FL3745 EVB GND.
 - c) Arduino SDA (A4) to IS31FL3745 EVB SDA.
 - d) Arduino SCL (A5) to IS31FL3745 EVB SCL.
 - e) If Arduino use 3.3V MCU VCC, connect 3.3V to IS31FL3745 EVB SDB, if Arduino use 5.0V MCU VCC, connect 5.0V or 3.3V to EVB SDB.
(Arduino UNO MCU VCC is 5V, so SDB can be 5V or 3.3V)
- 3) Use the test code in appendix I or download the test firmware (sketch) from the ISSI website, a .txt file and copy the code to Arduino IDE, compile and upload to Arduino.
- 4) Run the Arduino code for desired mode setting by Arduino code.

Please refer to the datasheet to get more information about IS31FL3745.
