

# Low- $R_{ON}$ , Dual-SPST/Single-SPDT Clickless Switches with Negative Rail Capability

## General Description

The MAX4901–MAX4905 switches feature negative signal capability that allows signals below ground to pass through without distortion. The MAX4901/MAX4902 are a dual SPST (single-pole/single-throw) and the MAX4903/MAX4904/MAX4905 are a single SPDT (single-pole/double-throw) configuration. These analog switches operate from a single +1.8V to +5.5V supply and have low  $0.6\Omega$  on-resistance, making them ideal for switching audio signals.

The MAX4905 includes a comparator that can be used for headphone detection or mute/send key function. The MAX4902/MAX4904/MAX4905 have internal shunt resistors to automatically discharge any capacitance at the NO<sub>-</sub> and NC connection points. This reduces click-and-pop sounds that occur when switching audio signals between pre-charged points. A break-before-make feature and auto-discharge also help to reduce popping.

These SPST and SPDT switches are available in space-saving 8-pin TDFN and 9-bump UCSP™ packages and operate over the  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  extended temperature range.

## Applications

Cell Phones  
PDAs and Handheld Devices

Notebook Computers  
MP3 Players

UCSP is a trademark of Maxim Integrated Products, Inc.

## Features

- ◆ Distortion-Free Signal Throughput Down to  $V_{CC} - 5.5\text{V}$
- ◆ Comparator for Headphone or Mute Detection (MAX4905)
- ◆ Clickless Switches with Internal Shunt Resistors (MAX4902/MAX4904/MAX4905)
- ◆  $0.6\Omega$  (typ) Low On-Resistance ( $R_{ON}$ )
- ◆  $0.25\Omega$  On-Resistance Flatness
- ◆ +1.8V to +5.5V Supply Voltage
- ◆ 0.04% THD

## Pin Configurations

**MAX4901–MAX4905**

## Pin Description (MAX4901/MAX4902 Dual-SPST Switches)

PIN		NAME	FUNCTION
TDFN	UCSP		
1	B1	V <sub>CC</sub>	Positive Supply-Voltage Input. Bypass V <sub>CC</sub> to GND with a 0.1µF capacitor as close to V <sub>CC</sub> as possible.
2	A1	COM1	Analog Switch 1, Common Terminal
—	B2	N.C.	No Connection. Leave N.C. unconnected.
3	A2	NO1	Analog Switch 1, Normally Open Terminal. NO1 (MAX4902) has a shunt resistor to GND when the switch is in open position.
4	A3	IN1	Digital Control Input for Analog Switch 1. A logic high on IN1 connects COM1 to NO1 and a logic low opens the switch.
5	B3	GND	Ground
6	C3	IN2	Digital Control Input for Analog Switch 2. A logic high on IN2 connects COM2 to NO2 and a logic low opens the switch.
7	C2	NO2	Analog Switch 2, Normally Open Terminal. NO2 has a shunt resistor to GND when the switch is in open position (MAX4902).
8	C1	COM2	Analog Switch 2, Common Terminal
EP	—	EP	Exposed Pad. Connect exposed pad to GND.

**MAX4901-MAX4905**

## Pin Description (MAX4903/MAX4904/MAX4905 SPDT Switches)

PIN		NAME	FUNCTION
TDFN	UCSP		
1	A1	V <sub>CC</sub>	Positive Supply-Voltage Input. Bypass V <sub>CC</sub> to GND with a 0.1µF capacitor as close to V <sub>CC</sub> as possible.
2	A2	NO	Analog Switch, Normally Open Terminal. NO has a shunt resistor to GND when the switch is in open position (MAX4904/MAX4905).
3	A3	IN	Digital Control Input. Logic low on IN connects COM to NC and logic high connects COM to NO.
4	B2	N.C.	No Connection. Leave N.C. unconnected (MAX4903/MAX4904).
		CMPO	Comparator Output (MAX4905)
5	B3	GND	Ground
6	C3	N.C.	No Connection. Leave N.C. unconnected (MAX4903/MAX4904).
		CMP-	Comparator Input (MAX4905)
7	C2	NC	Analog Switch, Normally Closed Terminal. NC has a shunt resistor to GND when the switch is in open position (MAX4904/MAX4905).
8	B1	COM	Analog Switch, Common Terminal
—	C1	N.C.	No Connection. Leave N.C. unconnected (MAX4903/MAX4904/MAX4905)
EP	—	EP	Exposed Pad. Connect exposed pad to GND.

# Low-RON, Dual-SPST/Single-SPDT Clickless Switches with Negative Rail Capability

## Typical Operating Circuit

### Detailed Description

The MAX4901–MAX4905 are low on-resistance, low-voltage, dual-SPST and single-SPDT analog switches that operate from a +1.8V to +5.5V supply and are fully specified for nominal 3.0V applications. The devices feature a negative signal capability that allows signals below ground to pass through without distortion and have break-before-make switching (MAX4903/MAX4904/MAX4905).

The MAX4905 features a comparator that can be used for headphone or mute detection. The comparator threshold is internally generated to be approximately  $1/3$  of  $V_{CC}$ . The MAX4902/MAX4904/MAX4905 feature an internal shunt resistor to discharge any capacitance at  $NO_+$  and  $NC$  connection points. This reduces the click-and-pop sounds that occur when switching audio signals.

### Applications Information

#### Digital Control Inputs

The MAX4901–MAX4905 logic inputs accept up to +5.5V, regardless of supply voltage. For example, with a +3.3V supply,  $IN_+$  can be driven low to GND and high to +5.5V, allowing for mixing of logic levels in a system. Driving  $IN_+$  rail-to-rail minimizes power consumption. For a +1.8V supply voltage, the logic thresholds are 0.5V (low) and 1.4V (high). For a +5V supply voltage, the logic thresholds are 0.8V (low) and 2.0V (high).

#### Analog Signal Levels

The on-resistance of the MAX4901–MAX4905 changes very little for analog input signals across the entire supply-voltage range (see the *Typical Operating Characteristics*). The switches are bidirectional.

The MAX4901–MAX4905 pass signals as low as  $V_{CC} - 5.5V$ , including signals below ground with minimal distortion. Note that there are shunt resistors on  $NO_+$  and  $NC$  when they are unconnected to  $COM_+$  for the MAX4902/MAX4904/MAX4905.

#### Comparator (MAX4905)

The MAX4905 includes a comparator that can be used for mute and headphone detection functions. The positive terminal of the comparator is internally set to  $V_{CC} / 3$ . When the negative terminal ( $CMP_-$ ) is below the threshold, the comparator output ( $CMPO$ ) is a logic high.

The comparator threshold of  $V_{CC} / 3$  allows for detection of headphones because headphone audio signals are typically biased to  $V_{CC} / 2$ .

#### Shunt Resistor (MAX4902/MAX4904/MAX4905)

The  $50\Omega$  shunt resistors on the MAX4902/MAX4904/MAX4905 automatically discharge any capacitance at the  $NC$  or  $NO_+$  terminals when they are unconnected to  $COM_+$ . This reduces audio click-and-pop sounds that occur when switching between audio sources.

# Low-RON, Dual-SPST/Single-SPDT Clickless Switches with Negative Rail Capability

MAX4901-MAX4905

Audible clicks and pops are caused when a step DC voltage is switched into the speaker. By automatically discharging the side that is not connected, any residual DC voltage is removed, thereby reducing the clicks and pops.

## Power-Supply Sequencing and Overvoltage Protection

**Caution:** Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the device.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply  $V_{CC}$  before applying analog signals, especially if the analog signal is not current-limited.

## UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, PC board techniques, bump-pad layout, and recommended reflow temperature profile, as well as the latest information on reliability testing results, refer to the Application Note: UCSP—A Water-Level Chip-Scale Package on Maxim's web site at [www.maxim-ic.com/ucsp](http://www.maxim-ic.com/ucsp).
