

TVM SERIES

Wiring Diagram

L1 = Phase A

L2 = Phase B

L3 = Phase C

NO = Normally Open

NC = Normally Closed

C = Common, Transfer Contact

Relay contacts are isolated.

F = 2A Fast acting fuses are recommended, but not required

Ordering Information

| MODEL | LINE VOLTAGE | VOLTAGE UNBALANCE | TRIP DELAY | RESTART DELAY |
|-----------------|-----------------|----------------------|---------------|------------------|
| TVM208A100.5S3S | 208VAC | 10% | 0.5s | 3s |
| TVM230A101S1S | 230VAC | 10% | 1s | 1s |
| TVM460A41S5M | 460VAC | 4% | 1s | 5m |
| TVM460A75S2M | 460VAC | 7% | 5s | 2m |
| TVM480A45S5S | 480VAC | 4% | 5s | 5s |
| TVM480A100.5S3S | 480VAC | 10% | 0.5s | 3s |

Description

The TVM Series Provides protection for motors and other sensitive loads. Continuously measures the voltage of each of the three phases using a microcomputer circuit design that senses under and overvoltage, voltage unbalance, phase loss, and phase reversal. Protection is provided even when regenerated voltages are present. Includes a trip delay to prevent nuisance tripping and a restart delay to prevent short cycling after a momentary power outage.

Operation

Upon application of line voltage, the restart delay begins. The output relay is de-energized during restart delay. Under normal conditions, the output energizes after restart delay. Undervoltage, overvoltage, and voltage unbalance must be sensed for continuous trip delay period before the output is de-energized. The output will not de-energize if a fault is corrected during the trip delay. The restart delay begins as soon as the output relay de-energizes. If the restart delay is completed when the fault is corrected, the output relay will energize immediately.

The output relay will not energize if a fault or phase reversal is sensed as 3-phase input voltage is applied.

Reset: Reset is automatic upon correction of a fault.

LED Operation

The LED flashes green during the restart delay, then glows green when the output energizes. It flashes red during the trip delay then glows red when the output de-energizes. It flashes red/green if phase reversal is sensed.

Features & Benefits

| FEATURES | BENEFITS |
|---|---|
| Proprietary microcontroller based circuitry | Constant monitoring to protect against phase loss, phase reversal; over, under, and unbalanced voltage; short cycling |
| Compact design measures 2 in. (50.8mm) square | Perfect for OEM applications where cost, size and ease of installation are important |
| LED indication | Provides diagnostics of relay, fault and time delay status |
| Encapsulated | Protects against shock, vibration and humidity |

TVM SERIES

Accessories

LPSM003ZXID (Indicating), LPSM003Z (Non-indicating) Fuse Holders

Littelfuse POWR-SAFE Dead Front holders provide optimum protection to personnel for Class CC and Midget-Style fuses. 600 VAC/DC

0KLK002.T Midget Fuse (2 Amp)

10 x 38 fast acting, high-interrupting capacity, current-limiting type fuse. 600 Vac/500 Vdc

P1015-13 (AWG 10/12), P1015-64 (AWG 14/16), P1015-14 (AWG 18/22) Female Quick Connect These 0.25 in. (6.35 mm) female terminals are constructed with an insulator barrel to provide

P1023-20 DIN Rail Adapter

strain relief.

Allows module to be mounted on a 35 mm DIN type rail with two #10 screws.

VRM6048 Voltage Reduction Module

Allows the voltage monitor to monitor a 3-phase 550 to 600VAC Line.
