## DESCRIPTION

The ISSI IS61C6416AL, IS62C6416AL, IS64C6416AL and IS65C6416AL are high-speed, 1,048,576-bit static RAMs organized as 65,536 words by 16 bits. They are fabricated using ISSI's high-performance CMOS technology. This highly reliable process coupled with innovative circuit design techniques, yields access times as fast as 12 ns with low power consumption.

When  $\overline{CE}$  is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down with CMOS input levels.

Easy memory expansion is provided by using Chip Enable and Output Enable inputs,  $\overline{CE}$  and  $\overline{OE}$ . The active LOW Write Enable ( $\overline{WE}$ ) controls both writing and reading of the memory. A data byte allows Upper Byte ( $\overline{UB}$ ) and Lower Byte ( $\overline{LB}$ ) access.

The IS61C6416AL, IS62C6416AL, IS64C6416AL and IS65C6416AL are packaged in the JEDEC standard 44-pin 400-mil SOJ and 44-pin TSOP (Type II).
