

# 1 Gbit (128 Mbyte) 3.0V SPI Flash

## Features

- CMOS 3.0V Core
- Serial Peripheral Interface (SPI) with Multi-I/O
  - SPI Clock polarity and phase modes 0 and 3
  - Double Data Rate (DDR) option
  - Extended Addressing: 32-bit address
  - Serial Command set and footprint compatible with S25FL-A, S25FL-K, and S25FL-P SPI families
  - Multi I/O Command set and footprint compatible with S25FL-P SPI family
- READ Commands
  - Normal, Fast, Dual, Quad, Fast DDR, Dual DDR, Quad DDR
  - AutoBoot – power up or reset and execute a Normal or Quad read command automatically at a preselected address
  - Common Flash Interface (CFI) data for configuration information
- Programming (1.5 Mbytes/s)
  - 512-byte Page Programming buffer
  - Quad-Input Page Programming (QPP) for slow clock systems
- Erase (0.5 Mbytes/s)
  - Uniform 256-kbyte sectors
- Cycling Endurance
  - 100,000 Program-Erase Cycles, minimum
- Data Retention
  - 20 Year Data Retention, minimum

## Security Features

- One Time Program (OTP) array of 2048 bytes
- Block Protection
  - Status Register bits to control protection against program or erase of a contiguous range of sectors.
  - Hardware and software control options
  - Advanced Sector Protection (ASP)
  - Individual sector protection controlled by boot code or password
- Cypress® 65 nm MirrorBit® Technology with Eclipse™ Architecture
- Core Supply Voltage: 2.7V to 3.6V
- I/O Supply Voltage: 1.65V to 3.6V
- Temperature Range / Grade:
  - Industrial (–40 °C to +85 °C)
  - Industrial Plus (–40 °C to +105 °C)
  - Automotive, AEC-Q100 Grade 3 (–40 °C to +85 °C)
  - Automotive, AEC-Q100 Grade 2 (–40 °C to +105 °C)
  - Automotive, AEC-Q100 Grade 1 (–40 °C to +125 °C)
- Packages (all Pb-free)
  - 16-lead SOIC (300 mils)
  - BGA-24, 8 × 6 mm
    - 5 × 5 ball (ZSA024) footprint

## General Description

This document contains information for the S70FL01GS device, which is a dual die stack of two S25FL512S die. For detailed specifications, refer to the discrete die datasheet provided in the [Affected Documents/Related Documents](#) table.

## 1. Block Diagram

## 2. Connection Diagrams

Figure 1. 16-Pin Plastic Small Outline Package (SO)

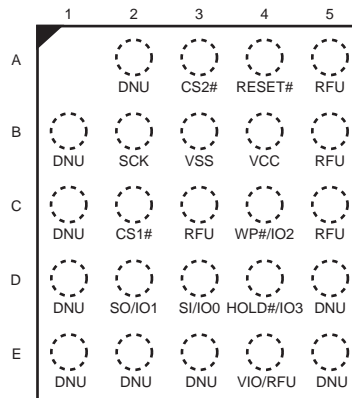

Figure 2. 24-Ball BGA, 5 x 5 Ball Footprint (ZSA024), Top View

**Note:**

1.  $V_{IO}$  is not supported in the S70FL01GS device and is RFU. Refer to [Section 7](#) for more details.

### 3. Input/Output Summary

**Table 2. Signal List**

| Signal Name     | Type     | Description   |
|-----------------|----------|---|
| RESET#          | Input    | <b>Hardware Reset:</b> Low = device resets and returns to standby state, ready to receive a command. The signal has an internal pull-up resistor and may be left unconnected in the host system if not used.  |
| SCK             | Input    | <b>Serial Clock.</b>  |
| CS1#            | Input    | <b>Chip Select.</b> FL512S #1.  |
| CS2#            | Input    | <b>Chip Select.</b> FL512S #2.  |
| SI / IO0        | I/O      | <b>Serial Input</b> for single bit data commands or IO0 for Dual or Quad commands.  |
| SO / IO1        | I/O      | <b>Serial Output</b> for single bit data commands. IO1 for Dual or Quad commands.   |
| WP# / IO2       | I/O      | <b>Write Protect</b> when not in Quad mode. IO2 in Quad mode. The signal has an internal pull-up resistor and may be left unconnected in the host system if not used for Quad commands.   |
| HOLD# / IO3     | I/O      | <b>Hold</b> (pause) serial transfer in single bit or Dual data commands. IO3 in Quad-I/O mode. The signal has an internal pull-up resistor and may be left unconnected in the host system if not used for Quad commands.  |
| V <sub>CC</sub> | Supply   | <b>Core Power Supply.</b>   |
| V <sub>IO</sub> | Supply   | <b>Versatile I/O Power Supply. Note:</b> V <sub>IO</sub> is not supported in the S70FL01GS device. Refer to <a href="#">Section 7</a> . for more details.   |
| V <sub>SS</sub> | Supply   | <b>Ground.</b>  |
| NC              | Unused   | <b>Not Connected.</b> No device internal signal is connected to the package connector nor is there any future plan to use the connector for a signal. The connection may safely be used for routing space for a signal on a Printed Circuit Board (PCB). However, any signal connected to an NC must not have voltage levels higher than V <sub>CC</sub> .  |
| RFU             | Reserved | <b>Reserved for Future Use.</b> No device internal signal is currently connected to the package connector but there is potential future use of the connector for a signal. It is recommended to not use RFU connectors for PCB routing channels so that the PCB may take advantage of future enhanced features in compatible footprint devices.   |
| DNU             | Reserved | <b>Do Not Use.</b> A device internal signal may be connected to the package connector. The connection may be used by Cypress for test or other purposes and is not intended for connection to any host system signal. Any DNU signal related function will be inactive when the signal is at V <sub>IL</sub> . The signal has an internal pull-down resistor and may be left unconnected in the host system or may be tied to V <sub>SS</sub> . Do not use these connections for PCB signal routing channels. Do not connect any host system signal to this connection. |

## 4. Device Operations

### 4.1 Programming

Each Flash die must be programmed independently due to the nature of the dual die stack.

### 4.2 Simultaneous Die Operation

The user may only access one Flash die of the dual die stack at a time via its respective Chip Select.

### 4.3 Sequential Reads

Sequential reads are not supported across the end of the first Flash die to the beginning of the second. If the user desires to sequentially read across the two die, data must be read out of the first die via CS1# and then read out of the second die via CS2#.

### 4.4 Sector/Bulk Erase

A sector erase command must be issued for sectors in each Flash die separately. Full device Bulk Erase via a single command is not supported due to the nature of the dual die stack. A Bulk Erase command must be issued for each die.

### 4.5 Status Registers

Each Flash die of the dual die stack is managed by its own Status Registers. Reads and updates to the Status Registers must be managed separately. It is recommended that Status Register control bit settings of each die are kept identical to maintain consistency when switching between die.

### 4.6 Configuration Register

Each Flash die of the dual die stack is managed by its own Configuration Register. Updates to the Configuration Register control bits must be managed separately. It is recommended that Configuration Register control bit settings of each die are kept identical to maintain consistency when switching between die.

### 4.7 Bank Address Register

It is recommended that the Bank Address Register bit settings of each die are kept identical to maintain consistency when switching between die.

### 4.8 Security and DDR Registers

It is recommended that the bit settings for ASP Register, Password Register, PPB Lock Register, PPB Access Register, DYB Access Register, and DDR Data Learning Register in each die are kept identical to maintain consistency when switching between die.

### 4.9 Block Protection

Each Flash die of the dual die stack will maintain its own Block Protection. Updates to the TBPROT and BPNV bits of each die must be managed separately. By default, each die is configured to be protected starting at the top (highest address) of each array, but no address range is protected. It is recommended that the Block Protection settings of each die are kept identical to maintain consistency when switching between die. In addition, any update to the FREEZE bit must be managed separately for each die. If the FREEZE bit is set to a logic 1, it cannot be cleared to a logic 0 until a power-on-reset is executed on each die that has the FREEZE bit set to 1.

## 5. Read Identification (RDID)

The Read Identification (RDID) command outputs the one-byte manufacturer identification, followed by the two-byte device identification and the bytes for the Common Flash Interface (CFI) tables. Each die of the FL01GS dual die stack will have identical identification data as the FL512S die, with the exception of the CFI data at byte 27h, as shown in [Table 3](#).

**Table 3. Product Group CFI Device Geometry Definition**

| Byte | Data | Description              |
|------|------|--------------------------|
| 27h  | 1Bh  | Device Size = $2^N$ byte |

## 6. RESET#

Note that the hardware RESET# input (pin 3 on the 16-pin SO package and ball A4 on the 5x5 BGA package) is bonded out and active for the S70FL01GS device. For applications that do NOT require use of the RESET# pin, it is recommended to not use RESET# for PCB routing channels that would cause the RESET# signal to be asserted Low ( $V_{IL}$ ). Doing so will cause the device to reset to standby state. The RESET# signal has an internal pull-up resistor and may be left unconnected in the host system if not used.

## 7. Versatile I/O Power Supply ( $V_{IO}$ )

Note that the Versatile I/O ( $V_{IO}$ ) power supply (pin 14 on the 16-pin SO package and ball E4 on the 5x5 BGA package) is not supported, and pin 14 and ball E4 are RFU (Reserved for Future Use) in the standard configuration of the S70FL01GS device. Contact your local sales office to confirm availability with the  $V_{IO}$  feature enabled.

## 8. DC Characteristics

This section summarizes the DC Characteristics of the device.

**Table 4. DC Characteristics**

| Symbol                     | Parameter                                  | Test Conditions   | Min                  | Typ (1) | Max                              | Unit          |
|----------------------------|--|---|----------------------|---------|----------------------------------|---------------|
| $V_{IL}$                   | Input Low Voltage                          | –   | -0.5                 | –       | $0.2 \times V_{CC}$              | V             |
| $V_{IH}$                   | Input High Voltage                         | –   | $0.7 \times V_{CC}$  | –       | $V_{CC} + 0.4$                   | V             |

| $V_{OH}$                   | Output High Voltage                        | $I_{OH} = -0.1 \text{ mA}$  | $0.85 \times V_{CC}$ | –       |                                  | V             |
| $I_{LI}$                   | Input Leakage Current                      | $V_{CC} = V_{CC \text{ Max}}$ , $V_{IN} = V_{IH}$ or $V_{IL}$   | –                    | –       | $\pm 4$                          | $\mu\text{A}$ |
| $I_{LO}$                   | Output Leakage Current                     | $V_{CC} = V_{CC \text{ Max}}$ , $V_{IN} = V_{IH}$ or $V_{IL}$   | –                    | –       | $\pm 4$                          | $\mu\text{A}$ |
| $I_{CC1}$                  | Active Power Supply Current (READ)         | Serial SDR @ 50 MHz<br>Serial SDR @ 133 MHz<br>Quad SDR @ 80 MHz<br>Quad SDR @ 104 MHz<br>Quad DDR @ 66 MHz<br>Quad DDR @ 80 MHz<br>Outputs unconnected during read data return (2) | –                    | –       | 18<br>36<br>50<br>61<br>75<br>90 | mA            |
| $I_{CC2}$                  | Active Power Supply Current (Page Program) | $CS\# = V_{CC}$   | –                    | –       | 100                              | mA            |
| $I_{CC3}$                  | Active Power Supply Current (WRR)          | $CS\# = V_{CC}$   | –                    | –       | 100                              | mA            |
| $I_{CC4}$                  | Active Power Supply Current (SE)           | $CS\# = V_{CC}$   | –                    | –       | 100                              | mA            |
| $I_{CC5}$                  | Active Power Supply Current (BE) (3)       | $CS\# = V_{CC}$   | –                    | –       | 200                              | mA            |
| $I_{SB}$ (Industrial)      | Standby Current                            | RESET#, $CS\# = V_{CC}$ ; SI, SCK = $V_{CC}$ or $V_{SS}$ , Industrial Temp  | –                    | 140     | 200                              | $\mu\text{A}$ |
| $I_{SB}$ (Industrial Plus) | Standby Current                            | RESET#, $CS\# = V_{CC}$ ; SI, SCK = $V_{CC}$ or $V_{SS}$ , Industrial Plus Temp   | –                    | 140     | 600                              | $\mu\text{A}$ |

**Notes:**

1. Typical values are at  $T_{AI} = 25^\circ\text{C}$  and  $V_{CC} = 3\text{V}$ .
2. Output switching current is not included.
3. Bulk Erase current is for both die erasing simultaneously.

## 9. AC Test Conditions

Figure 3. Input, Output, and Timing Reference Levels

Figure 4. Test Setup

Table 5. AC Measurement Conditions

| Symbol | Parameter                 | Min  | Max | Unit |
|--------|---------------------------|--|-----|------|
| $C_L$  | Load Capacitance          | 30<br>15 (4)                               |     | pF   |
|        | Input Rise and Fall Times | –  | 2.4 | ns   |
|        | Input Pulse Voltage       | $0.2 \times V_{CC}$ to $0.8 \times V_{CC}$ |     | V    |
|        | Input Timing Ref Voltage  | $0.5 \times V_{CC}$                        |     | V    |
|        | Output Timing Ref Voltage | $0.5 \times V_{CC}$                        |     | V    |

**Notes:**

1. Output High-Z is defined as the point where data is no longer driven.
2. Input slew rate: 1.5 V/ns.
3. AC characteristics tables assume clock and data signals have the same slew rate (slope).
4. DDR Operation.

## 10. SDR AC Characteristics

**Table 6. SDR AC Characteristics (Single Die Package,  $V_{CC} = 2.7V$  to  $3.6V$ )**

| Symbol              | Parameter  | Min            | Typ | Max                            | Unit |
|---------------------|--|----------------|-----|--------------------------------|------|
| $F_{SCK, R}$        | SCK Clock Frequency for READ and 4READ instructions  | DC             | –   | 50                             | MHz  |
| $F_{SCK, C}$        | SCK Clock Frequency for single commands (4)  | DC             | –   | 133                            | MHz  |
| $F_{SCK, C}$        | SCK Clock Frequency for the following dual and quad commands: DOR, 4DOR, QOR, 4QOR, DIOR, 4DIOR, QIOR, 4QIOR | DC             | –   | 104                            | MHz  |
| $F_{SCK, QPP}$      | SCK Clock Frequency for the QPP, 4QPP commands   | DC             | –   | 80                             | MHz  |
| $P_{SCK}$           | SCK Clock Period   | $1/F_{SCK}$    | –   | $\infty$                       |      |
| $t_{WH}, t_{CH}$    | Clock High Time (5)  | $45\% P_{SCK}$ | –   | –                              | ns   |
| $t_{WL}, t_{CL}$    | Clock Low Time (5)   | $45\% P_{SCK}$ | –   | –                              | ns   |
| $t_{CRT}, t_{CLCH}$ | Clock Rise Time (slew rate)  | 0.1            | –   | –                              | V/ns |
| $t_{CFT}, t_{CHCL}$ | Clock Fall Time (slew rate)  | 0.1            | –   | –                              | V/ns |
| $t_{CS}$ (7)        | CS# High Time (Read Instructions)<br>CS# High Time (Program/Erase)   | 10<br>50       | –   | –                              | ns   |
| $t_{CSS}$           | CS# Active Setup Time (relative to SCK)  | 3              | –   | –                              | ns   |
| $t_{CSH}$           | CS# Active Hold Time (relative to SCK)   | 3              | –   | –                              | ns   |
| $t_{SU}$            | Data in Setup Time   | 1.5            | –   | 3000 (6)                       | ns   |

**Notes:**

1. Only applicable as a constraint for WRR instruction when SRWD is set to a 1.
2. Full  $V_{CC}$  range (2.7 - 3.6V) and  $CL = 30$  pF.
3. Regulated  $V_{CC}$  range (3.0 - 3.6V) and  $CL = 30$  pF.
4. Regulated  $V_{CC}$  range (3.0 - 3.6V) and  $CL = 15$  pF.
5.  $\pm 10\%$  duty cycle is supported for frequencies  $\leq 50$  MHz.
6. Maximum value only applies during Program/Erase Suspend/Resume commands.
7. When switching between die, a minimum time of  $t_{CS}$  must be kept between the rising edge of one chip select and the falling edge of the other for operations and data to be valid.

## 10.1 DDR AC Characteristics

**Table 7. DDR AC Characteristics 66 MHz and 80 MHz Operation**

| Symbol           | Parameter                                    | 66 MHz        |     |          | 80 MHz        |     |          | Unit |

| $t_{LZ}$         | Clock to Output Low Impedance                | 0             | –   | 8        | 0             | –   | 8        | ns   |
| $t_{IO\_skew}$   | First IO to last IO data valid time          | –             | –   | 600      | –             | –   | 600      | ps   |

**Notes:**

1. Regulated  $V_{CC}$  range (3.0 - 3.6V) and  $CL = 15$  pF.
2. Maximum value only applies during Program/Erase Suspend/Resume commands.

## 10.2 Capacitance Characteristics

**Table 8. Capacitance**

|           | Parameter  | Test Conditions | Min | Max | Unit |
|-----------|--|-----------------|-----|-----|------|
| $C_{IN}$  | Input Capacitance (applies to SCK, CS#1, CS#2, RESET#) | 1 MHz           | –   | 16  | pF   |
| $C_{OUT}$ | Output Capacitance (applies to All I/O)                | 1 MHz           | –   | 16  | pF   |

**Note:**

1. For more information on capacitance, please consult the IBIS models.

## 11. Ordering Information

The ordering part number is formed by a valid combination of the following:

**Notes:**

1. EHPLC = Enhanced High Performance Latency Code table.
2. Uniform 256-kB sectors = All sectors are uniform 256-kB with a 512B programming buffer.

## 11.1 Valid Combinations — Standard

Table 9 lists the valid combinations configurations planned to be supported in volume for this device.

**Table 9. S70FL01GS Valid Combinations — Standard**

| S70FL01GS Valid Combinations |              |                         |              |              | Package Marking (1)                      |
|------------------------------|--------------|-------------------------|--------------|--------------|--|
| Base Ordering Part Number    | Speed Option | Package and Temperature | Model Number | Packing Type |  |
| S70FL01GS                    | AG           | MFI, MFV                | 01           | 0, 1, 3      | FL01GS + A + (temp) + F + (Model Number) |
|                              | DP           |                         |              |              | FL01GS + D + (temp) + F + (Model Number) |
|                              | DS           |                         |              |              | FL01GS + S + (temp) + F + (Model Number) |
|                              | AG           | BHI, BHV                | C1           | 0, 3         | FL01GS + A + (temp) + H + (Model Number) |
|                              | DP           |                         |              |              | FL01GS + D + (temp) + H + (Model Number) |
|                              | DS           |                         |              |              | FL01GS + S + (temp) + H + (Model Number) |

**Note:**

1. Package Marking omits the leading "S70" and package type.

## 11.2 Valid Combinations — Automotive Grade / AEC-Q100

Table 10 lists configurations that are Automotive Grade / AEC-Q100 qualified and are planned to be available in volume. The table will be updated as new combinations are released. Consult your local sales representative to confirm availability of specific combinations and to check on newly released combinations.

Production Part Approval Process (PPAP) support is only provided for AEC-Q100 grade products.

Products to be used in end-use applications that require ISO/TS-16949 compliance must be AEC-Q100 grade products in combination with PPAP. Non-AEC-Q100 grade products are not manufactured or documented in full compliance with ISO/TS-16949 requirements.

AEC-Q100 grade products are also offered without PPAP support for end-use applications that do not require ISO/TS-16949 compliance.

**Table 10. S70FL01GS Valid Combinations — Automotive Grade / AEC-Q100**

| S70FL01GS Valid Combinations |              |                         |              |              | Package Marking (1)                      |
|------------------------------|--------------|-------------------------|--------------|--------------|--|
| Base Ordering Part Number    | Speed Option | Package and Temperature | Model Number | Packing Type |  |
| S70FL01GS                    | AG           | MFA, MFB, MFM           | 01           | 0, 1, 3      | FL01GS + A + (temp) + F + (Model Number) |
|                              | DS           |                         |              |              | FL01GS + S + (temp) + F + (Model Number) |
|                              | AG           | BHA, BHB, BHM           | C1           | 0, 3         | FL01GS + A + (temp) + H + (Model Number) |
|                              | DS           |                         |              |              | FL01GS + S + (temp) + H + (Model Number) |

**Note:**

1. Package Marking omits the leading "S70" and package type.

| ϕ1     | 5°         | -    | 15°  |
| ϕ2     | 0°         | -    | -    |

NOTES:

- ALL DIMENSIONS ARE IN MILLIMETERS.
- DIMENSIONING AND TOLERANCING PER ASME Y14.5M - 1994.
- DIMENSION D DOES NOT INCLUDE MOLD FLASH, PROTRUSIONS OR GATE BURRS. MOLD FLASH, PROTRUSIONS OR GATE BURRS SHALL NOT EXCEED 0.15 mm PER END. DIMENSION E1 DOES NOT INCLUDE INTERLEAD FLASH OR PROTRUSION. INTERLEAD FLASH OR PROTRUSION SHALL NOT EXCEED 0.25 mm PER SIDE. D AND E1 DIMENSIONS ARE DETERMINED AT DATUM H.
- THE PACKAGE TOP MAY BE SMALLER THAN THE PACKAGE BOTTOM. DIMENSIONS D AND E1 ARE DETERMINED AT THE OUTMOST EXTREMES OF THE PLASTIC BODY EXCLUSIVE OF MOLD FLASH, TIE BAR BURRS, GATE BURRS AND INTERLEAD FLASH, BUT INCLUSIVE OF ANY MISMATCH BETWEEN THE TOP AND BOTTOM OF THE PLASTIC BODY.
- DATUMS A AND B TO BE DETERMINED AT DATUM H.
- "N" IS THE MAXIMUM NUMBER OF TERMINAL POSITIONS FOR THE SPECIFIED PACKAGE LENGTH.
- THE DIMENSIONS APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.10 TO 0.25 mm FROM THE LEAD TIP.
- DIMENSION "b" DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL BE 0.10 mm TOTAL IN EXCESS OF THE "b" DIMENSION AT MAXIMUM MATERIAL CONDITION. THE DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OF THE LEAD FOOT.
- THIS CHAMFER FEATURE IS OPTIONAL. IF IT IS NOT PRESENT, THEN A PIN 1 IDENTIFIER MUST BE LOCATED WITHIN THE INDEX AREA INDICATED.
- LEAD COPLANARITY SHALL BE WITHIN 0.10 mm AS MEASURED FROM THE SEATING PLANE.

**13.2 24-Ball BGA 8 x 6 mm (ZSA024)**

| SYMBOL   | DIMENSIONS |      |      |
|----------|------------|------|------|
|          | MIN.       | NOM. | MAX. |

| D1       | 4.00 BSC   |      |      |
| E1       | 4.00 BSC   |      |      |
| MD       | 5          |      |      |
| ME       | 5          |      |      |
| n        | 24         |      |      |
| $\phi b$ | 0.35       | 0.40 | 0.45 |
| eD       | 1.00 BSC   |      |      |
| eE       | 1.00 BSC   |      |      |
| SD       | 0.00       |      |      |
| SE       | 0.00       |      |      |

**NOTES:**

- ALL DIMENSIONS ARE IN MILLIMETERS.
- DIMENSIONING AND TOLERANCING METHODS PER ASME Y14.5M-1994.
- BALL POSITION DESIGNATION PER JEP95, SECTION 3, SPP-020.
- [e] REPRESENTS THE SOLDER BALL GRID PITCH.
- SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION.  
SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION.  
n IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
- DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
- "SD" AND "SE" ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW.  
WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" OR "SE" = 0.  
WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, "SD" = eD/2 AND "SE" = eE/2.
- "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED BALLS.
- A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK, METALLIZED MARK INDENTATION OR OTHER MEANS.

No computing device can be absolutely secure. Therefore, despite security measures implemented in Cypress hardware or software products, Cypress does not assume any liability arising out of any security breach, such as unauthorized access to or use of a Cypress product. In addition, the products described in these materials may contain design defects or errors known as errata which may cause the product to deviate from published specifications. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. You shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
