

Micropower, Low Charge
Injection, Quad CMOS Analog
Switches with Data Latches

FEATURES

- Micropower Operation
- Single 5V or $\pm 15V$ Supply Operation
- Low Charge Injection
- Low R_{ON}
- Low Leakage
- Guaranteed Break Before Make
- Latch Resistant Design
- TLL/CMOS Compatible
- Improved Second Source for DG221/DG222
- Microprocessor Bus Compatible

KEY SPECIFICATIONS

- Supply Current $I^+ = 40\mu A$, $I^- = 5\mu A$ Max
- Charge Injection
 - $\pm 15V$ Supplies $\pm 25pC$ Max
 - Single 5V Supply 2pC Typ
- R_{ON} 65 Ω Typ
- Signal Range $\pm 15V$

DESCRIPTION

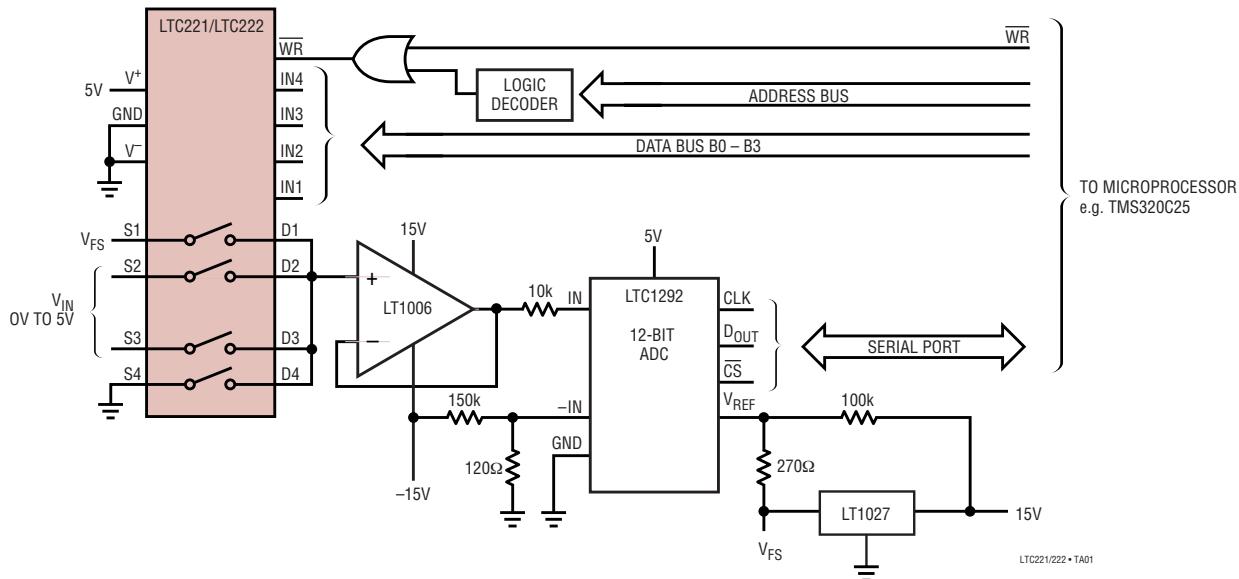

The LTC®221 and LTC222 are micropower, quad CMOS analog switches which typically dissipate only 250 μW from $\pm 15V$ supplies and 40 μW from a single 5V supply. Onboard latches allow the LTC221 and LTC222 to interface directly to most microprocessor buses. The switches have 65 Ω typical on resistance and a very high off resistance. A break before make characteristic is inherent in these switches to prevent the shorting of two channels. The signal range is $\pm 15V$ with a supply voltage of $\pm 15V$ and 0V to 5V with a single 5V supply. The switches have special charge compensation circuitry which greatly reduces charge injection to a maximum of $\pm 25pC$ ($\pm 15V$ supplies).

The LTC221 and LTC222 are designed for applications such as microprocessor controlled programmable gain amplifiers, automatic test equipment, communication systems, and data acquisition systems. The LTC221 is normally closed and the LTC222 is normally open as shown in the Logic Table.

 LT and LTC are registered trademarks of Linear Technology Corporation.

TYPICAL APPLICATION

Two-Channel, 12-Bit, Self Calibrating Data Acquisition System

LTC221/LTC222

ABSOLUTE MAXIMUM RATINGS

(Note 1)

Voltages Referenced to V⁻

V ⁺	44V
GND	25V
Digital Inputs, S, D (Note 2)	-2V to (V ⁺ 2V) or 20mA, Whichever Occurs First

Current

Any Input Except S or D	30mA
Continuous S or D	20mA

Peak S or D

(Pulsed at 1 ms, 10% Duty Cycle Max)	70mA
--	------

ESD Susceptibility (Note 3)	4kV
-----------------------------------	-----

Power Dissipation (Plastic)	500mW
-----------------------------------	-------

Power Dissipation (Ceramic)	900mW
-----------------------------------	-------

Operating Temperature Range

LTC221C/LTC222C	0°C to 70°C
-----------------------	-------------

LTC221M/LTC222M (OBSOLETE)	-55°C to 125°C
----------------------------------	----------------

Storage Temperature Range	-65°C to 150°C
---------------------------------	----------------

Lead Temperature (Soldering, 10 sec)	300°C

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: Signals on S, D, or IN exceeding V^+ or V^- will be clamped by internal diodes. Limit forward diode current to maximum current rating.

Note 3: In-circuit ESD on the switch pins (S or D) exceeds 4kV (see test circuit).

Note 4: Leakage current with a 5V supply is guaranteed by correlation with the $\pm 15V$ leakage current.

TYPICAL PERFORMANCE CHARACTERISTICS

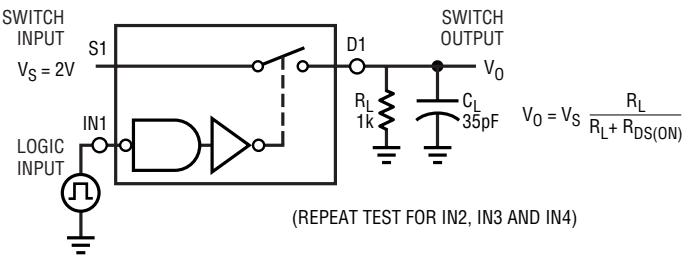

APPLICATIONS INFORMATION

Switching Time Test Circuit

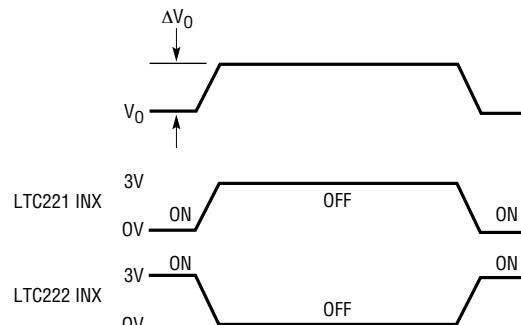

Switch output waveform shown for $V_S = \text{constant}$ with logic input waveform as shown. Note that V_S may be (+) or (-) as per switching time test circuit. V_0 is the steady state output switch on. Feedthrough via gate capacitance may result in spikes at leading and trailing edge of output waveform.
