

PIC32MX1/2/5 Starter Kit Information Sheet

The PIC32MX1/2/5 Starter Kit (DM320100) provides a low-cost method for the development and testing of CAN Bus applications with PIC32MX5XX devices. This evaluation kit includes the PIC32MX1/2/5 Starter Kit development board, a standard A-to-B mini-USB cable for the debugger, a standard type A and micro-B USB connectors, MCP2562 CAN bus Transceivers, a CiA DS102 compliant DB9 interface to the CAN transceiver, three user-programmable LEDs, and three push button switches.

Installing MPLAB® IDE and C Compilers

The MPLAB Integrated Development Environment (IDE) should be installed prior to using the PIC32MX1/2/5 Starter Kit. While MPLAB IDE provides the assembler tools for development, the Microchip demonstration code requires installation of a C compiler. Microchip's MPLAB C Compiler seamlessly integrates into MPLAB IDE. Both the MPLAB IDE and MPLAB C Compiler are free (see the following note) and are available for download at www.microchip.com/MPLAB and www.microchip.com/compilers, respectively.

Note: Standard Evaluation (Free) – All optimization levels are enabled for 60 days, but then revert to optimization level 1 only.

Microchip Demonstration Code and More Information

For the free Microchip demonstration code and more information, please visit the PIC32MX1/2/5 Starter Kit page at: www.microchip.com. From the Design Support menu, click **Development Tools**. Then, from the Starter Kits menu, click **MPLAB Starter Kit**, and then click **PIC32MX1/2/5 Starter Kit**. From the downloads section, select the desired device application.

Running the PIC32MX1/2/5 Starter Kit Demonstration Code

After downloading and installing the Microchip development tools, please refer to the `README.txt` file in the demonstration folder for instructions on running the code.
