NOTDuino Kit

Product Datasheet
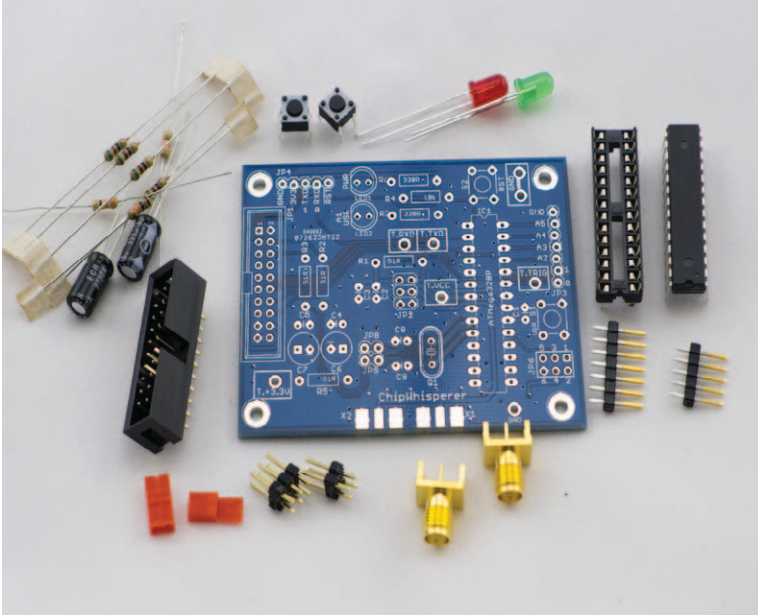

Do you love the smell of solder in the morning? Then you'll love our NOTDuino kit - a simple ATMEGA328P based target for the ChipWhisperer - but it's not an Arudino.

The programmer built into the ChipWhisperer-Lite and ChipWhisperer-Pro can program the AVR device.

This does not come preloaded with firmware on the ATMEGA328P, so if using this device stand-alone (without a ChipWhisperer) you will need an Atmel ISP 6-pin programmer.

Product Highlights

A nice and easy through-hole solder kit, allows you to program an Atmel AtMega328P target.

Many tutorials work on both the AtMega328P and the XMEGA targets.

You can also program this device through the Arduino interface if you really must (but that goes against it's name).

Ordering Summary

NAE-CWLITE-NDKIT Notduino Kit
