#### [HANDLING PRECAUTIONS]

### **⚠**Precautions for Safety

In the case that a ZNR surge absorber (Type D, Series E) (hereafter referred to as the ZNR, or product name) is used, if an abnormality takes place because of peripheral conditions of the

ZNR (material, environments, power source conditions, circuit conditions, etc. in equipment design), fire, electric shock, burn, or product failure may be occur.

The precautions for this product are described below, understand the content thoroughly before usage. For more questions, contact us.

#### 1. A Precautions to be strictly observe

1.1 Confirmation of performance ratings

Use the ZNR within its rated range of performance such as the Max. allowable voltage, withstanding surge current, withstanding energy, impulse life (surge life), average pulse power, and operating temperature range. If used outside the range, the ZNR can be degrade and have element fracture, which may result in smoking and ignition.

- 1.2 To avoid accidents due to unexpected phenomena, take the following measures
  - 1) In the event of fracture of the ZNR, its pieces may scatter; hence, put the case or cover of the set product in place.
  - Do not install the ZNR near combustible substances (polyvinyl chloride wires, resin moldings, etc.).
     If it is difficult to do, install a nonflammable cover.
  - 3) Across-the-line use

When the ZNR is used across a line, put a current fuse in series with the ZNR. (Refer to Item 2.1, 1) (4) and Table 1.)

- 4) Use between line to ground
- (1) In the case that the ZNR is used between a line to the ground, the short-circuit of the ZNR may not blow the current fuse because of grounding resistance, which may cause smoking and ignition of the ZNR's exterior resin. As the measure against it, install an earth leakage breaker on the power supply side of the ZNR position. If no earth leakage breaker is installed, use a thermal fuse together with a current fuse in series. (Refer to Table 1.)
- (2) In the case that the ZNR is used between a live part and metal case, a electric shock may develop at a short circuit of the ZNR; hence, ground the metal case to the ground or keep it from the human body.

#### 2. Application notes

- 2.1 Pay attention to the following items to avoid the shortened life and failure of the ZNR
  - 1) Circuit conditions
  - (1) Select a ZNR of which the maximum voltage including fluctuations in source voltage allows for the maximum permissible circuit voltage. (Refer to Table 1.)
  - (2) In cases that surges are intermittently applied at short intervals (for example, in the case that the voltage of the noise simulator test is impressed), do not cause them to exceed the ZNR's rated pulse power.
  - (3) Select a ZNR recommended in Table 1.
  - <1> Across the Line (Line to Line) use

If possible, use a part No. marked with \* incase of voltage temporarily rises load unbalance of separately-wired loads, short between hot and neutral-line, open of neutral line in single-phase-three-wired system, and due to resonance at switching for a capacitive, inductive load.

## CLASSIFICATION PRODUCT REFERENCE DATA SHEET SUBJECT ZNR SURGE ABSORBER E-SERIES (Bulk Type) 2 - 22

#### <2> Used between line to ground

Use a different Part No. from "Across-the-line use" as table 1, because of raising voltage in case of "Line to Ground Fault".

Use a part No. marked with \*\* in table 1, in case of the insulation resistance test (500VDC) for equipment. When using a part of the varistor voltage that the insulation efficiency examination can not be cleared, there is a case where the surge absorber can be done by removing it from the circuit depending on the circuit condition (Refer examination of Japan Domestic Safety Regulations).

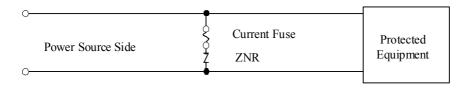

#### (4) Concerning current fuse

<1> We recommended to selecting a ZNR and the rated current of a current fuse as follows. Finally, please be sure that there is no danger if the ZNR mounted on equipment breaks.

| Series                | E5        | E7        | E10       |
|-----------------------|-----------|-----------|-----------|
| Standard Part Numbers | ERZE05+++ | ERZE07+++ | ERZE10+++ |
| Fuse rated current    | 5A max.   | 7A max.   | 10A max.  |

<sup>\*</sup> Fuses shall use rated voltages appropriate for circuits.

<2> The recommended fuse position is shown in table 1, "Example of ZNR application", however, if the load current of protected equipment is larger than that of the above recommended fuse rated current, install a current fuse at the position shown below.

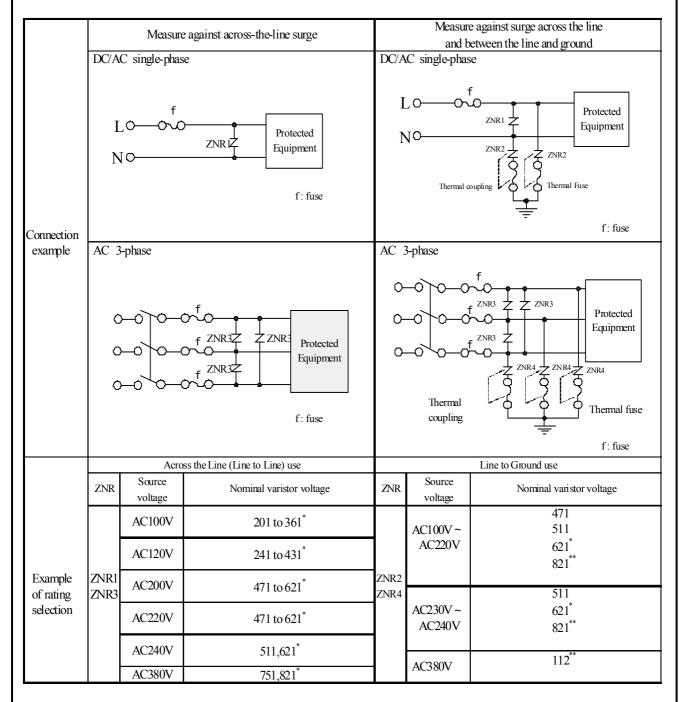

#### (5) Concerning thermal fuse

Set a thermal fuse to get high thermal conductivity with ZNR.

|                | 314)                                    | 3 - 22 |

#### Table 1 Example of ZNR application

## CLASSIFICATION PRODUCT REFERENCE DATA SHEET SUBJECT ZNR SURGE ABSORBER E-SERIES (Bulk Type) 4 - 22

#### 2) Operating environments

- (1) The ZNR is designed to use indoors. Do not use it exposed outdoors.
- (2) Do not use the ZNR in places exposed to temperatures beyond the operating temperature range, such as places exposed to sunlight and vicinities of heating equipment.
- (3) Do not use the ZNR in places exposed to high temperatures and high humidity, such as places exposed directly to rain, wind, dew condensation, and vapor.
- (4) Do not use the ZNR in dusty and salty places and atmospheres polluted by corrosive gases.

#### 3) Processing conditions

- (1) Do not wash the ZNR by such solvents (thinner, acetone, etc.) as its exterior resin deteriorates.
- (2) Do not apply a strong vibration, shock (by falling, etc.) to the ZNR, cracking to its exterior resin and element may occur.
- (3) When coating the ZNR with resin (including molding), do not use such resin.
- (4) Do not bend the ZNR lead wires at the position close to its ZNR exterior resin, or apply external force to the position.
- (5) When soldering the ZNR lead wires, follow the recommended condition and do not melt the solder and insulating materials constituting the ZNR.

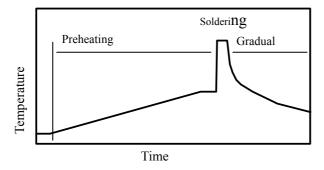

| Type D | Soldering Method | Recommended<br>Condition | Attention                                   |
|--------|------------------|--------------------------|---|
|        | Flow soldering   | 260deg.C, within 10sec.  | Type D is not Reflow soldering object part. |

<sup>\*1</sup> When using at the thing except the condition that it is possible to suggest to the above, confirm that there is not a problem.

The limit of the repair be once and go in solder temperature within 400deg.C and moreover within 5 seconds.

- \*2 Profile be careful because there is a margin of error in the way of measuring.
- \*3 The temperature depend on the size and the package density of the substrate.

  Therefore, confirm every kind of the substrate.
  - Soldering temperature-time profile to recommend

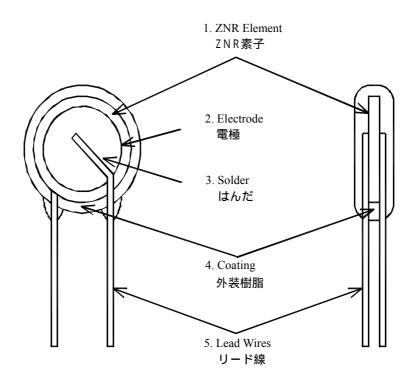

| Preheating      | The normal 130deg.C | max.120s |
|-----------------|---------------------|----------|
| Soldering       | max.260deg.C        | max.10s  |
| Gradual cooling | Gradual cool        | ing      |

| Elec | trical Test Methods                                  | T  |
|------|--|--|
|      | Charactenristics                                     | Test Methods/Description   |
|      | Standard test condition                              | Environmental conditions under which every measuring is done without doubt on the measuring results. Unless specially, specified, temperature, relative humidity are 5deg.C to 35deg.C, 45 to 85%RH. respectively. |
| 3.1  | Maximum allowable voltage                            | The maximum Sine wave voltage (rms) that can be applied continuously or maximum DC voltage in the specified environmental temperature range.   |
| 3.2  | Rated wattage  | The maximum power to be loaded with in the specified environmental temperature   |
| 3.3  | Varistor voltage                                     | Voltage between both terminals of ZNR measured when CmA of DC current is applied under standard conditions. It is called Vc. Measuring the varistor voltage should be made promptly to avoid heat affection.       |
| 3.4  | Clamping voltage                                     | The maximum voltage between two terminals with the specified standard impulse current (8/20 $\mu\text{s}).$  |
| 3.5  | Maximum peak current<br>(Withstanding surge current) | The maximum current within the varistor voltage change of $\pm$ 10% with the standard impulse (8/20 $\mu$ s) applied by the specified condition.   |
| 3.6  | Maximum energy                                       | The maximum energy within the varistor voltage change of $\pm 10\%$ when the specified impulse is applied.   |
| 3.7  | Temperature coefficient of varistor voltage          | Coefficient indicating dependency of varistor voltage on specified temperature.  |
| 3.8  | Capacitance  | Capacitance shall be measured at 1kHz $\pm$ 10%, 1Vrms max. ( 1MHz $\pm$ 10% below 100pF), 0V bias and 20 $\pm$ 2deg.C.  |
| 3.9  | Dielectric loss                                      | Dielectric loss tangent shall be measured at 1kHz $\pm$ 10%, 1Vrms max. ( 1MHz $\pm$ 10% below 100pF), 0V bias and 20 $\pm$ 2deg.C.  |
| 3.10 | Withstand voltage                                    | The specified voltage shall be applied both terminals of the specimen connected together and metal foil closely wrapped round its body for 1 minute.   |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.

|     | Characteristics                      | Test Methods/Description  |
|-----|--------------------------------------|---|
| 4.1 | Robustness of terminations (Tensile) | After gradually applying the specified load and keeping the unit fixed for 10 sconds, the terminal shall be visually examined for any damage.   |
| 4.2 | Robustness of terminations (Bending) | The unit shall be secured with its terminals kept vertical and the specified load is applied, gradually bent by 90 in one direction, back to the original position, then 90 in the opposite direction, and again back to the original position. The damage of the terminals is visually examined.   |
| 4.3 | Vibration                            | After repeatedly applying a single harmonic vibration (amplitude; 0.75mm; double amplitude; 1.5mm with 1 minute vibration frequency cycles(10Hz to 55Hz to 10Hz) to each of three perpendicular directions for 2 hours. The varistor shall then be visually examined.                               |
| 4.4 | Solderability                        | After dipping the terminals to a depth of about 3mm from the body, in the melted solder of 235+/-5deg.C for 2+/-0.5 seconds, the terminals are visually examined.   |
| 4.5 | Resistance to Soldering Heat         | After each lead shall be dipped into a solder bath having a temperature 260+/-5deg.C to a point 2.0 ~ 2.5mm from the body of the unit, be held there for specified time, and then be stored at room temperature and humidity for 1 to 2 hour. The change of Vc and mechanical damages are examined. |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.

| SUBJECT        | ZNR SURGE ABSORBER E-SERIES (Bulk Type) |         |
|                | 314)                                    | 13 - 22 |

|     | Characteristics                       | Test Methods/Description   |
|-----|---------------------------------------|--|
| 5.1 | High temperature storage (Dry heat)   | The specimen shall be subjected to 125+/-2deg.C for 1000 hours in a thermostatic bath without load and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                              |
| 5.2 | Damp heat                             | The specimen shall be subjected to 40+/-2deg.C, 90 to 95%RH for 1000 hours without load and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.   |
| 5.3 | Low temperature storage (Cold)        | The specimen shall be subjected to - 40+/-2deg.C without load for 1000 hours and then stored at room temperature for 1 to 2 hours. Thereafter, the change of Vc shall be measured.   |
| 5.4 | Heat cycle                            | The temperature cycling shall be repeated 5 times and stored at room temperature and humidity for 1 to 2 hours. The change of Vc as well as mechanical damage shall be examined.   |
| 5.5 | High temperature load (Dry heat load) | After being continuously applied the maximum allowable voltage at 85+/-2deg.C for 1000 hours, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                      |
| 5.6 | Damp heat load                        | The specimen shall be subjected to 40+/-2deg.C, 90 to 95%RH and the maximum allowable voltage for 1000 hours and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                    |
| 5.7 | Impulse life I<br>(Surge life I)      | After the specified impulse is applied 10000 times continuously with the interval 10 seconds at room temperature, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.  |
| 5.8 | Impulse life II<br>(Surge life II)    | After the specified impulse is applied 100000 times continuously with the interval 10 seconds at room temperature, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured. |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.

#### Individual specifications of Dimensions and Electrical Requirements and Environmental Requirements are indicated below.

#### [HANDLING PRECAUTIONS]

### **⚠**Precautions for Safety

In the case that a ZNR surge absorber (Type D, Series E) (hereafter referred to as the ZNR, or product name) is used, if an abnormality takes place because of peripheral conditions of the

ZNR (material, environments, power source conditions, circuit conditions, etc. in equipment design), fire, electric shock, burn, or product failure may be occur.

The precautions for this product are described below, understand the content thoroughly before usage.

For more questions, contact us.

### 1. ⚠ Precautions to be strictly observe

1.1 Confirmation of performance ratings

Use the ZNR within its rated range of performance such as the Max. allowable voltage, withstanding surge current, withstanding energy, impulse life (surge life), average pulse power, and operating temperature range. If used outside the range, the ZNR can be degrade and have element fracture, which may result in smoking and ignition.

- 1.2 To avoid accidents due to unexpected phenomena, take the following measures
  - 1) In the event of fracture of the ZNR, its pieces may scatter; hence, put the case or cover of the set product in place.
  - 2) Do not install the ZNR near combustible substances (polyvinyl chloride wires, resin moldings, etc.). If it is difficult to do, install a nonflammable cover.
  - 3) Across-the-line use

When the ZNR is used across a line, put a current fuse in series with the ZNR. (Refer to Item 2.1, 1) (4) and Table 1.)

- 4) Use between line to ground
- (1) In the case that the ZNR is used between a line to the ground, the short-circuit of the ZNR may not blow the current fuse because of grounding resistance, which may cause smoking and ignition of the ZNR's exterior resin. As the measure against it, install an earth leakage breaker on the power supply side of the ZNR position. If no earth leakage breaker is installed, use a thermal fuse together with a current fuse in series. (Refer to Table 1.)
- (2) In the case that the ZNR is used between a live part and metal case, a electric shock may develop at a short circuit of the ZNR; hence, ground the metal case to the ground or keep it from the human body.

#### 2. Application notes

- 2.1 Pay attention to the following items to avoid the shortened life and failure of the ZNR
  - 1) Circuit conditions
  - (1) Select a ZNR of which the maximum voltage including fluctuations in source voltage allows for the maximum permissible circuit voltage. (Refer to Table 1.)
  - (2) In cases that surges are intermittently applied at short intervals (for example, in the case that the voltage of the noise simulator test is impressed), do not cause them to exceed the ZNR's rated pulse power.
  - (3) Select a ZNR recommended in Table 1.
  - <1> Across the Line (Line to Line) use

If possible, use a part No. marked with \* incase of voltage temporarily rises load unbalance of separately-wired loads, short between hot and neutral-line, open of neutral line in single-phase-three-wired system, and due to resonance at switching for a capacitive, inductive load.

|          |         |   |

## CLASSIFICATION PRODUCT REFERENCE DATA SHEET SUBJECT ZNR SURGE ABSORBER E-SERIES (Taping Type) 2 - 23

#### <2> Used between line to ground

Use a different Part No. from "Across-the-line use" as table 1, because of raising voltage in case of "Line to Ground Fault".

Use a part No. marked with \*\* in table 1, in case of the insulation resistance test (500VDC) for equipment. When using a part of the varistor voltage that the insulation efficiency examination can not be cleared, there is a case where the surge absorber can be done by removing it from the circuit depending on the circuit condition (Refer examination of Japan Domestic Safety Regulations).

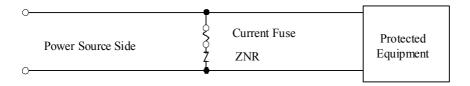

#### (4) Concerning current fuse

<1> We recommended to selecting a ZNR and the rated current of a current fuse as follows. Finally, please be sure that there is no danger if the ZNR mounted on equipment breaks.

| Series                | E5         | E7         | E10        |
|-----------------------|------------|------------|------------|
| Standard Part Numbers | ERZE05++++ | ERZE07++++ | ERZE10++++ |
| Fuse rated current    | 5A max.    | 7A max.    | 10A max.   |

<sup>\*</sup> Fuses shall use rated voltages appropriate for circuits.

<2> The recommended fuse position is shown in table 1, "Example of ZNR application", however, if the load current of protected equipment is larger than that of the above recommended fuse rated current, install a current fuse at the position shown below.

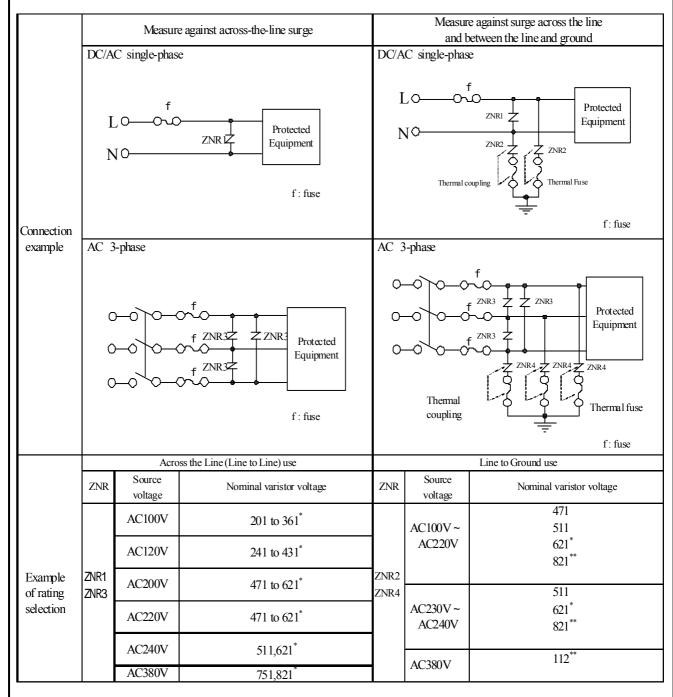

#### (5) Concerning thermal fuse

Set a thermal fuse to get high thermal conductivity with ZNR.

| CLASSIFICATION | PRODUCT REFERENCE DATA SHEET              |        |

#### Table 1 Example of ZNR application

## CLASSIFICATION PRODUCT REFERENCE DATA SHEET SUBJECT ZNR SURGE ABSORBER E-SERIES (Taping Type) 4 - 23

#### 2) Operating environments

- (1) The ZNR is designed to use indoors. Do not use it exposed outdoors.
- (2) Do not use the ZNR in places exposed to temperatures beyond the operating temperature range, such as places exposed to sunlight and vicinities of heating equipment.
- (3) Do not use the ZNR in places exposed to high temperatures and high humidity, such as places exposed directly to rain, wind, dew condensation, and vapor.
- (4) Do not use the ZNR in dusty and salty places and atmospheres polluted by corrosive gases.

#### 3) Processing conditions

- (1) Do not wash the ZNR by such solvents (thinner, acetone, etc.) as its exterior resin deteriorates.
- (2) Do not apply a strong vibration, shock (by falling, etc.) to the ZNR, cracking to its exterior resin and element may occur.
- (3) When coating the ZNR with resin (including molding), do not use such resin.
- (4) Do not bend the ZNR lead wires at the position close to its ZNR exterior resin, or apply external force to the position.
- (5) When soldering the ZNR lead wires, follow the recommended condition and do not melt the solder and insulating materials constituting the ZNR.

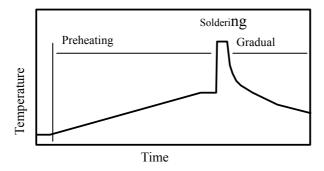

| Type D | Soldering Method | Recommended<br>Condition | Attention                                   |  |
|--------|------------------|--------------------------|---|--|
|        | Flow soldering   | 260deg.C, within 10sec.  | Type D is not Reflow soldering object part. |  |

<sup>\*1</sup> When using at the thing except the condition that it is possible to suggest to the above, confirm that there is not a problem.

The limit of the repair be once and go in solder temperature within 400deg.C and moreover within 5 seconds.

- \*2 Profile be careful because there is a margin of error in the way of measuring.
- \*3 The temperature depend on the size and the package density of the substrate.

  Therefore, confirm every kind of the substrate.
  - Soldering temperature-time profile to recommend

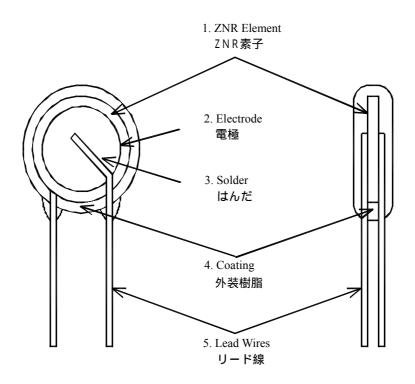

| Preheating      | The normal 130deg.C | max.120s |
|-----------------|---------------------|----------|
| Soldering       | max.260deg.C        | max.10s  |
| Gradual cooling | Gradual cool        | ing      |

|         |  | +                              |

|         | ZNR SURGE ABSORBER E-SERIES (Taping Type)  | 5 - 23                         |
| 4) Lo   | ng-term storage  |                                |
| (1)     | Do not store the ZNR under high temperatures and high humidity. Store it at temperature and at humidity below 75%RH, and use it within two years.  Before using the ZNR that has been stored for a long period (two year or longer), confi Avoid atmospheres full of corrosive gases (hydrogen sulfide, sulfurous acid, chlorine, a Avoid direct sunlight and dew condensation.  | rm the solderability.          |
| 3. No   | tices  |                                |
|         | In cases that the ZNR is used in equipment (aerospace equipment, medical equipment) extremely high reliability, ask us for selection of part No., and protection coordinates the coordinates of the coordin |                                |
| 3.2     | There is possibility that the ZNR will unexpectedly smoke or ignite because of abscircuit voltage and invasion of excessive surge. To prevent that accident from spequipment and not to expand the damage, use multiplex protection such as the acframe-retardant materials for housing parts and structural parts.  | preading over the              |
| 3.3     | Package marking includes the product number, quantity, and country of origin. As a rule, country of origin should be indicated in English.   |                                |
| 4. Su   | bstances of this product   |                                |

#### CLASSIFICATION

#### PRODUCT REFERENCE DATA SHEET

SUBJECT

#### ZNR SURGE ABSORBER E-SERIES (Taping Type)

8 - 23

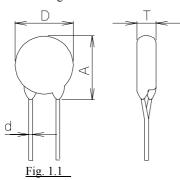

### 2. Appearance, Dimensions

#### 2.1 Appearance

Without dirt and crack, marking should be clear.

#### 2.2 Dimensions

Refer to Figure 1.1 and 1.2 and table 1.1, 1.2.

Straight Lead Type

Part No : ERZE\*\*E

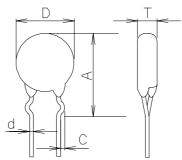

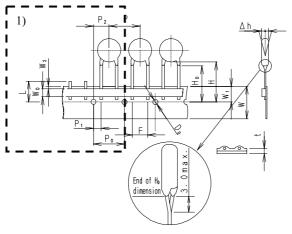

Fig. 1.2

Crimped Leads Cut Type

Part No: ERZE\*\*F

#### 2.3 Taping Dimensions

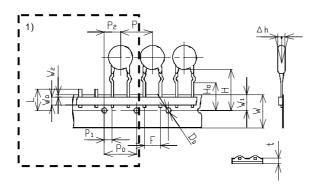

Refer to Figure 1.3, 1.4 and table 1.3, 1.4.

1) There are two types of  $W_0$ .

Fig. 1.3 Straight Leads and taping

Part No.: ERZE\*\*E□□□

1) P2

1)There are two types of W<sub>0</sub>.

Fig. 1.4 Crimped Leads and Taping

Part No.: ERZE\*\*F□□□

|                | ( 1 6 31 /                                | 10 - 23 |

| Charactenristics |   | Test Methods/Description   |
|------------------|---|--|
|                  | Standard test condition                           | Environmental conditions under which every measuring is done without doubt on the measuring results. Unless specially, specified, temperature, relative humidity are 5deg.C to 35deg.C, 45 to 85%RH. respectively. |
| 3.1              | Maximum allowable voltage                         | The maximum Sine wave voltage (rms) that can be applied continuously or maximum DC voltage in the specified environmental temperature range.   |
| 3.2              | Rated wattage                                     | The maximum power to be loaded with in the specified environmental temperature   |
| 3.3              | Varistor voltage                                  | Voltage between both terminals of ZNR measured when CmA of DC current is applied under standard conditions. It is called Vc. Measuring the varistor voltage should be made promptly to avoid heat affection.       |
| 3.4              | Clamping voltage                                  | The maximum voltage between two terminals with the specified standard impulse current (8/20 $\mus).$   |
| 3.5              | Maximum peak current (Withstanding surge current) | The maximum current within the varistor voltage change of $\pm$ 10% with the standard impulse (8/20 $\mu$ s) applied by the specified condition.   |
| 3.6              | Maximum energy                                    | The maximum energy within the varistor voltage change of $\pm 10\%$ when the specified impulse is applied.   |
| 3.7              | Temperature coefficient of varistor voltage       | Coefficient indicating dependency of varistor voltage on specified temperature.  |
| 3.8              | Capacitance                                       | Capacitance shall be measured at $1 \text{kHz} \pm 10\%$ , $1 \text{Vrms max}$ . ( $1 \text{MHz} \pm 10\%$ below $100 \text{pF}$ ), $0 \text{V}$ bias and $20 \pm 2 \text{deg.C}$ .                                |
| 3.9              | Dielectric loss                                   | Dielectric loss tangent shall be measured at 1kHz ± 10%, 1Vrms max. (1MHz ± 10% below 100pF), 0V bias and 20 ± 2deg.C.   |
| 3.10             | Withstand voltage                                 | The specified voltage shall be applied both terminals of the specimen connected together and metal foil closely wrapped round its body for 1 minute.   |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.

| 4.2             | Robustness of terminations (Bending) | No outstanding damage  | Force :                           | 4.9N(Series E5,E7,E8,E10,E11)<br>9.8N(Series E14)            |
| 4.3             | Vibration                            | No outstanding damage  | Frequency:<br>Amplitude:<br>Time: | 10 to 55Hz<br>0.75mm<br>each 2 hours                         |
| 4.4             | Solderability                        | Minimum 95% of the terminals should be covered with solder uniformly | Solder temp. :<br>Immersed time : | 235+/-5deg.C<br>2+/-0.5s                                     |
| 4.5             | Resistance to soldering heat         | ΔV1 +/- 5%   | Solder temp. :<br>Immersed time : | 260+/-5deg.C<br>10+/-1sec                                    |

| Characteristics |                                      | Test Methods/Description  |
|-----------------|--------------------------------------|---|
| 4.1             | Robustness of terminations (Tensile) | After gradually applying the specified load and keeping the unit fixed for 10 sconds, the terminal shall be visually examined for any damage.   |
| 4.2             | Robustness of terminations (Bending) | The unit shall be secured with its terminals kept vertical and the specified load is applied, gradually bent by 90' in one direction, back to the original position, then 90' in the opposite direction, and again back to the original position. The damage of the terminals is visually examined. |
| 4.3             | Vibration                            | After repeatedly applying a single harmonic vibration (amplitude; 0.75mm; double amplitude; 1.5mm with 1 minute vibration frequency cycles(10Hz to 55Hz to 10Hz) to each of three perpendicular directions for 2 hours. The varistor shall then be visually examined.                               |
| 4.4             | Solderability                        | After dipping the terminals to a depth of about 3mm from the body, in the melted solder of 235+/-5deg.C for 2+/-0.5 seconds, the terminals are visually examined.   |
| 4.5             | Resistance to Soldering Heat         | After each lead shall be dipped into a solder bath having a temperature 260+/-5deg.C to a point 2.0 ~ 2.5mm from the body of the unit, be held there for specified time, and then be stored at room temperature and humidity for 1 to 2 hour. The change of Vc and mechanical damages are examined. |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.

| SUBJECT        | ZNR SURGE ABSORBER E-SERIES (Taping Type) |         |
|                |   | 13 - 23 |

| Characteristics |                                       | Test Methods/Description   |
|-----------------|---------------------------------------|--|
| 5.1             | High temperature storage (Dry heat)   | The specimen shall be subjected to 125+/-2deg.C for 1000 hours in a thermostatic bath without load and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                              |
| 5.2             | Damp heat                             | The specimen shall be subjected to 40+/-2deg.C, 90 to 95%RH for 1000 hours without load and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.   |
| 5.3             | Low temperature storage (Cold)        | The specimen shall be subjected to - 40+/-2deg.C without load for 1000 hours and then stored at room temperature for 1 to 2 hours. Thereafter, the change of Vc shall be measured.   |
| 5.4             | Heat cycle                            | The temperature cycling shall be repeated 5 times and stored at room temperature and humidity for 1 to 2 hours. The change of Vc as well as mechanical damage shall be examined.   |
| 5.5             | High temperature load (Dry heat load) | After being continuously applied the maximum allowable voltage at 85+/-2deg.C for 1000 hours, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                      |
| 5.6             | Damp heat load                        | The specimen shall be subjected to 40+/-2deg.C, 90 to 95%RH and the maximum allowable voltage for 1000 hours and then stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.                    |
| 5.7             | Impulse life I<br>(Surge life I)      | After the specified impulse is applied 10000 times continuously with the interval 10 seconds at room temperature, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured.  |
| 5.8             | Impulse life II<br>(Surge life II)    | After the specified impulse is applied 100000 times continuously with the interval 10 seconds at room temperature, the specimen shall be stored at room temperature and humidity for 1 to 2 hours. Thereafter, the change of Vc shall be measured. |

Note: Varistor Voltage change of forward direction shall be measured in the test of uni-pole surge life and DC load life.
