ISL1561

Fixed Gain Dual Port Class-G Differential xDSL Line Driver

FN7941
Rev 1.00
February 26, 2013

The ISL1561 is a fixed gain dual port class-G differential amplifier designed for driving full rate ADSL2+ and VDSL2 signals at very low power dissipation. The driver runs on a single +14V power supply and internally generates higher supply voltages when needed to enable power efficient operation for high peak-to-average ratio (PAR) ADSL2+ and VDSL2 signals.

In ADSL2+ mode of operation with full 19.8dBm transmit signal power across 100Ω line load, each port consumes only 520mW of power, while with 19.5dBm VDSL2 8b profile a port consumes 610mW of power. In VDSL2 17a mode of operation with 14.5dBm transmit power, a port will consume 411mW of power. These typical power consumption figures account for receiver hybrid loading effects and transformer losses.

The ISL1561 provides two ports of wideband, current feedback amplifiers optimized for low power consumption in xDSL systems. The drivers achieve an average upstream missing band power ratio (MBPR) distortion of better than -64dBc under 19.8dBm transmit signal power into 100Ω load. A three pin serial interface is used to program an 8-bit internal register to set each port's supply current with 0.5mA step size. This flexibility allows the DSP to optimize each port separately during modem training.

The device is supplied in a thermally-enhanced small footprint (4mmx4mm) 24 lead QFN package. The ISL1561 is specified for operation over the full -40°C to +85°C industrial temperature range and is Pb-free RoHS compliant.

Features

- Internal fixed gain of 11.6V/V to transformer (see Figure 3)
- 360mA output drive capability
- 41.8V_{P-P} differential output drive into 100Ω in class G mode
- VDSL2 8b profile MTPR of -64dBc
- VDSL2 17a profile MTPR of -60dBc
- ADSL2+, VDSL2 8b and 17a power consumption of 520mW, 610mW and 411mW respectively
- 8-bit programmable register to set supply current on each port
- 3 pin serial port interface

Applications

- Dual port ADSL2+ and VDSL2 DSLAM

Alternate Part

- ISL1591 Class AB VDSL Driver

NOTES:

1. Please refer to TB347 for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for ISL1561. For more information on MSL please see tech brief TB363.

Operating Conditions

Ambient Temperature Range . . . . . .-40°C to +85°C
Junction Temperature Range . . . . . .-40°C to +150°C

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.
5. For θ_{JC}, the "case temp" location is the center of the exposed metal pad on the package underside.

Electrical Specifications

V_{SP} = +14V, R_{L-DIFF} = 51Ω differential (emulating transformer input load), Refer to Figure 3, T_A = +25°C. Ports tested separately unless otherwise indicated.

PARAMETER	DESCRIPTION	CONDITIONS	MIN (Note 6)	TYP	MAX (Note 6)	UNIT
AC PERFORMANCE						
AV		Gain Across the Load, R_B = 5.1Ω		11.6		V/V
BW	-3dB Bandwidth	I_S = 14mA/port, V_O < $2V_{P-P-DIFF}$		110		MHz
		I_S = 10mA/port, V_O = $5V_{P-P-DIFF}$		70		MHz
Gain Flatness	Small Signal Gain Flatness	I_S = 14mA/port, 17.6MHz		0.3		dB
		I_S = 14mA/port, 30MHz		0.9		dB
SR	Slew Rate	V_{OUT} = $16V_{P-P-DIFF}$ (20% to 80%)	560	1000		V/µs

General Description

The ISL1561 is a class G amplifier designed to reduce power consumption in ADSL2+ and VDSL2 applications compared to class AB. With the high PAR used for xDSL signals, a supply voltage of +14V can be used for the majority of the small amplitude cycles while boosting to a supply voltage of +28V can be used for the few high amplitude cycles.

Digital Interface

A 12-bit serial port interface is used to program ISL1561. The first bit defines the write (1'b1) and read (1'b0) operation to the register. The following 3-bit calls the registers. The last 8-bit programs the registers. Default start-up for ISL1561 is in disable mode with boost and CS pins having internal pull ups and SCLK and SDATA pins having internal pull downs. ISL1561 can only be programmed through the SPI when CS is set low.

Register Listing

ADDRESS	FUNCTION	BIT	DESCRIPTION
3'h3	Setting of quiescent current of port AB	[7]	Boost disable
		[6:0]	Program quiescent current of port AB.
3'h7	Setting of quiescent current of port CD	[7]	Boost disable
		[6:0]	Program quiescent current of port CD.

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest revision.

DATE	REVISION	CHANGE
January 24, 2013	FN7941.1	Changed MIN/MAX specs for “Differential Output Offset Voltage” on page 5 from -75/75mV to -125/125mV.
November 21, 2012		Added resistor values to Figure 3 on page 3. Edited table heading for columns 1 and 2 in Table 2 on page 11.
October 5, 2012	FN7941.0	Initial Release.

About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the fastest growing markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil or to find out how to become a member of our winning team, visit our website and career page at www.intersil.com.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective product information page. Also, please check the product information page to ensure that you have the most updated datasheet: ISL1561
