### Description

The MAAP-011232 is a 2-stage power amplifier with gain shut off, operating from 100 MHz to 3 GHz. For operation in the 100 MHz to 1 GHz frequency range no I/O matching is required. Internal DC blocking is provided at the input, while the RF output port is DC coupled through an external bias-tee. Bias current, RF gain and output power are controlled with a gate bias voltage ( $V_G$ ). Typical current consumption is less than 300 mA at maximum output power.

The MAAP-011232 is well suited to both power and driver requirements for multiple applications such as LMR, Milcom, Sensors & Telemetry, Test & Measurement and Satcom.

The MAAP-011232 is fabricated using a GaAs D-mode high breakdown process which features full passivation for increased performance and reliability.

5. Exceeding any one or combination of these limits may cause permanent damage to this device.

MACOM does not recommend sustained operation near these survivability limits.

- 7. Operating at nominal conditions with  $T_J \le +150^{\circ}C$  will ensure MTTF > 1 x 10<sup>6</sup> hours.
- 8. Junction Temperature  $(T_J) = T_C + \Theta_{JC} * [(V * I) (P_{OUT} P_{IN})]$ Typical thermal resistance  $(\Theta_{JC}) = 29^{\circ}C/W$ .

### **Handling Procedures**

Please observe the following precautions to avoid damage:

### **Static Sensitivity**

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these (HBM) Class 1A devices.

### Operating the MAAP-011232

To operate the device, follow these steps:

- 1. Set VG to -2 V.
- 2. Turn on VD1 and VD2 to 5-9 V.
- 3. Adjust VG to set  $I_{DQ}2$  ( $I_{DQ}1$  varies).
- 4. Turn off in reverse order with VG last.
