

Bluetooth® Audio Modules BTM510/511 – Firmware Release v22.2.5.0

The BTM510 and BTM511 low-power Bluetooth® modules from Laird are designed for adding robust audio and voice capabilities. Based on the market-leading Cambridge Silicon Radio BC05 chipset, these modules provide exceptionally low power consumption with outstanding range. Supporting the latest Bluetooth Version v3.0 specification, these modules provide the important advantage of Simple Secure Pairing that improves security and enhances easy use. BTM510 and BTM511 modules come standard with the apt-X[™] audio codec for wireline-quality stereo audio.

The modules' compact size makes them ideal for battery-powered headset form factor audio and voice devices. With a 16-bit stereo codec and microphone inputs to support stereo and mono applications, the modules contain a fully integrated Bluetooth-qualified stack along with SPP, HFP 1.6, HSP, AVRCP v1.5, and A2DP profiles.

The BTM510/511 modules include an embedded 32-bit, 64-MIPS DSP core within the BC05. This allows designers to make use of features such as echo cancellation and noise reduction using CSR Clear Voice Capture (CVC) as well as A2DP audio enhancements using CSR Music Manager.

BTM510 and BTM511 modules are provided with CSR's apt-X codec without additional license fees. CSR's world renowned apt-X[™] audio compression solutions retain the full integrity of original digital audio and are optimized for instant real-time audio streaming (http://www.csr.com/products/technology/aptx).

To speed product development and integration, Laird has developed a comprehensive AT command interface that simplifies application development, including support for audio and headset functionality. Combined with a low-cost development kit, Laird's Bluetooth modules provide faster time to market.
