

MCP14A0153/4/5 Future Product

MOSFET drivers that are capable of providing up to 1.5A of peak current while operating from a single 4.5V to 18V supply. There are three output configurations available; dual inverting (MCP14A0153), dual noninverting (MCP14A0154) and complementary (MCP14A0155). These devices feature low shoot-through current, matched rise and fall times, and short propagation delays which make them ideal for high switching frequency applications.

The MCP14A0153/4/5 family of devices offer enhanced control with Enable functionality. The active-high Enable pins can be driven low to drive the corresponding outputs of the MCP14A0153/4/5 low, regardless of the status of the Input pin. An integrated pull-up resistor allows the user to leave the Enable pins floating for standard operation.
