

Power line communication module for street lighting

Data brief

Description

The STEVAL-IHP007V1 evaluation board is a power line communication module which is an addition to the STEVAL-ILH006V3 and STEVAL-ILH007V1 HID ballast module. Providing features to manage street lighting network architecture, the module is designed to work in the CENELEC A-B-D bands. The module is based on an STM32F103CBT7 ARM Cortex-M3 microcontroller and an ST7580 PSK narrow band power line modem with up to 28.8 kbps data rate. The assembled MCU can be easily replaced with an equivalent 48-pin MCU from the STM32F0, STM32F2, STM32F3 families with just a few assembly changes. The module is designed to work with the STEVAL-ILH006V3 and STEVAL-ILH007V1 module, but can be associated with other lighting driver boards with a standard serial communication port.

Features

- SM6T15CA: Transil 600 W TVS diode
- SMAJ5.0CA-TR: Transil 400 W TVS diode
- ST7580: FSK, PSK multi-mode power line networking system-on-chip
- STM32F103CBT7: STM32 ARM-based 32-bit MCU
- STPS1L30: low drop power Schottky rectifier 1 A, 30 V, 0.3 V
- STTH1L06A: Turbo 2 ultrafast high voltage rectifier
- RoHS compliant
