

OLIMEXINO-STM32 development board User's manual

All boards produced by Olimex are ROHS compliant

Document revision C, October 2012
Designed by OLIMEX Ltd, 2012

INTRODUCTION TO DUINO:

Arduino is an open-source electronics prototyping platform, designed to make the process of using electronics in multidisciplinary projects easily accessible. The hardware consists of a simple open hardware design for the Arduino board with an Atmel AVR processor and on-board I/O support. The software consists of a standard programming language and the boot loader that runs on the board.

Arduino hardware is programmed using a Wiring-based language (syntax + libraries), similar to C++ with some simplifications and modifications, and a Processing-based Integrated Development Environment (IDE).

The project began in Ivrea, Italy in 2005 aiming to make a device for controlling student-built interaction design projects less expensively than other prototyping systems available at the time. As of February 2010 more than 120,000 Arduino boards had been shipped. Founders Massimo Banzi and David Cuartielles named the project after a local bar named Arduino. The name is an Italian masculine first name, meaning "strong friend". The English pronunciation is "Hardwin", a namesake of Arduino of Ivrea.

More information could be found at the creators web page <http://arduino.cc/> and in the Arduino Wiki <http://en.wikipedia.org/wiki/Arduino>

To make the story short - Arduino is easy for beginners who lack Electronics knowledge, but also does not restrict professionals as they can program it in C++ or mix of Arduino/C++ language.

There are thousands of projects which makes it easy to startup as there is barely no field where Arduino enthusiasts to have not been already.

Arduino has inspired two other major derivatives - MAPLE and PINGUINO. Based on 8-bit AVR technology the computational power of Arduino boards is modest, this is why a team from MIT developed the MAPLE project which is based on ARM7 STM32F103RBT6 microcontroller. The board has same friendly IDE as Arduino and offers the same capabilities as hardware and software but runs the Arduino code much faster. The Maple project can be found at <http://leafabs.com>

In parallel with Arduino another project was started called PINGUINO. This project chose its first implementation to be with PIC microcontrollers, as AVRs were hard to find in some parts of the world like South America so it is likely to see lot of PINGUINO developers are from that part of the world. PINGUINO project founders decided to go with Python instead Java for processing language. For the moment PINGUINO is much more flexible than Arduino as it is not limited to 8bit microcontrollers. Currently the IDE, which has GCC in background, can support 8-bit PIC microcontrollers, 32bit PIC32 (MIPS) microcontrollers and ARM7/CORTEXM3 microcontrollers which makes PINGUINO very flexible because once you make your project you can migrate easily through different hardware platforms and not being bound to a single microcontroller manufacturer. The PINGUINO project can be found at: <http://www.pinguino.cc>.

BOARD FEATURES:

We entered the Arduino/MAPLE field 5 years after the design was introduced, and this allowed us to see and resolve some of (what we consider) errors made by the Arduino inventors :-)

We had the possibility to read current customer feedback and to implement what they wanted to see in the original Arduino.

1. Original Arduino/MAPLE uses linear power supply, this limits the input voltage range. We designed the power supply to accept power from 9 to 30V DC thus making it possible to take virtually any power supply adapter on the market, also enable application which are in industrial power supply 24VDC.
2. We carefully selected all components to work reliable in **INDUSTIRAL temperature range -25+85C** so the board can be used in INDUSTIRAL applications while the original design is to Commercial 0 - 70C operating temperature.
3. The original Arduino/MAPLE design is not very reliable for portable applications as consumes it too much power with the linear voltage regulators, we put ULTRA LOW POWER voltage regulators and the consumption is only few microampers, which enables handheld and battery powered applications.
4. We add Li-Ion rechargeable battery power supply option with BUILD-IN on board charger, so when you attach battery it is automatically charged and kept in this state until the other power source (USB or external adapter) is removed and it AUTOMATICALLY will power the board - no jumpers, no switches!
5. Our board has UEXT connector which allows many existing modules like RF, ZIGBEE, GSM, GPS to be connected.
6. Our board has SD-MMC card
7. Our board has CAN driver on board
8. Our design allows RTC - Real Time Clock.
9. We made our design noise immune.
10. We use separate voltage regulator for the Analog part, which allows the ADC to be read correctly without the digital noise pickup.
11. Optionally if someone needs higher precision and temperature stability in Analog reading we have provided place on the board for Aref precise source.
12. The LEDs and the BUTTONs are on the edge of the board so there is easy access even if the boards have shields on them.
13. All components are LOWER than the connectors, so the shields do not interfere with them.
14. mini USB connector is used which is common and used in most cell phones, so you do not have to buy other cables
15. Original Arduino design had a flaw and the connectors were not spaced at 0.1" thus making breadboarding board use impossible, to keep the compatibility we have the same spacing but we added next to this connector on 0.1" which customer can use with perforated boards.

16. All signals on the connectors are printed on top and on bottom of the board, so when you check with probe you know exactly which port you are measuring.
17. 4 mount holes make board attachment easier

ELECTROSTATIC WARNING:

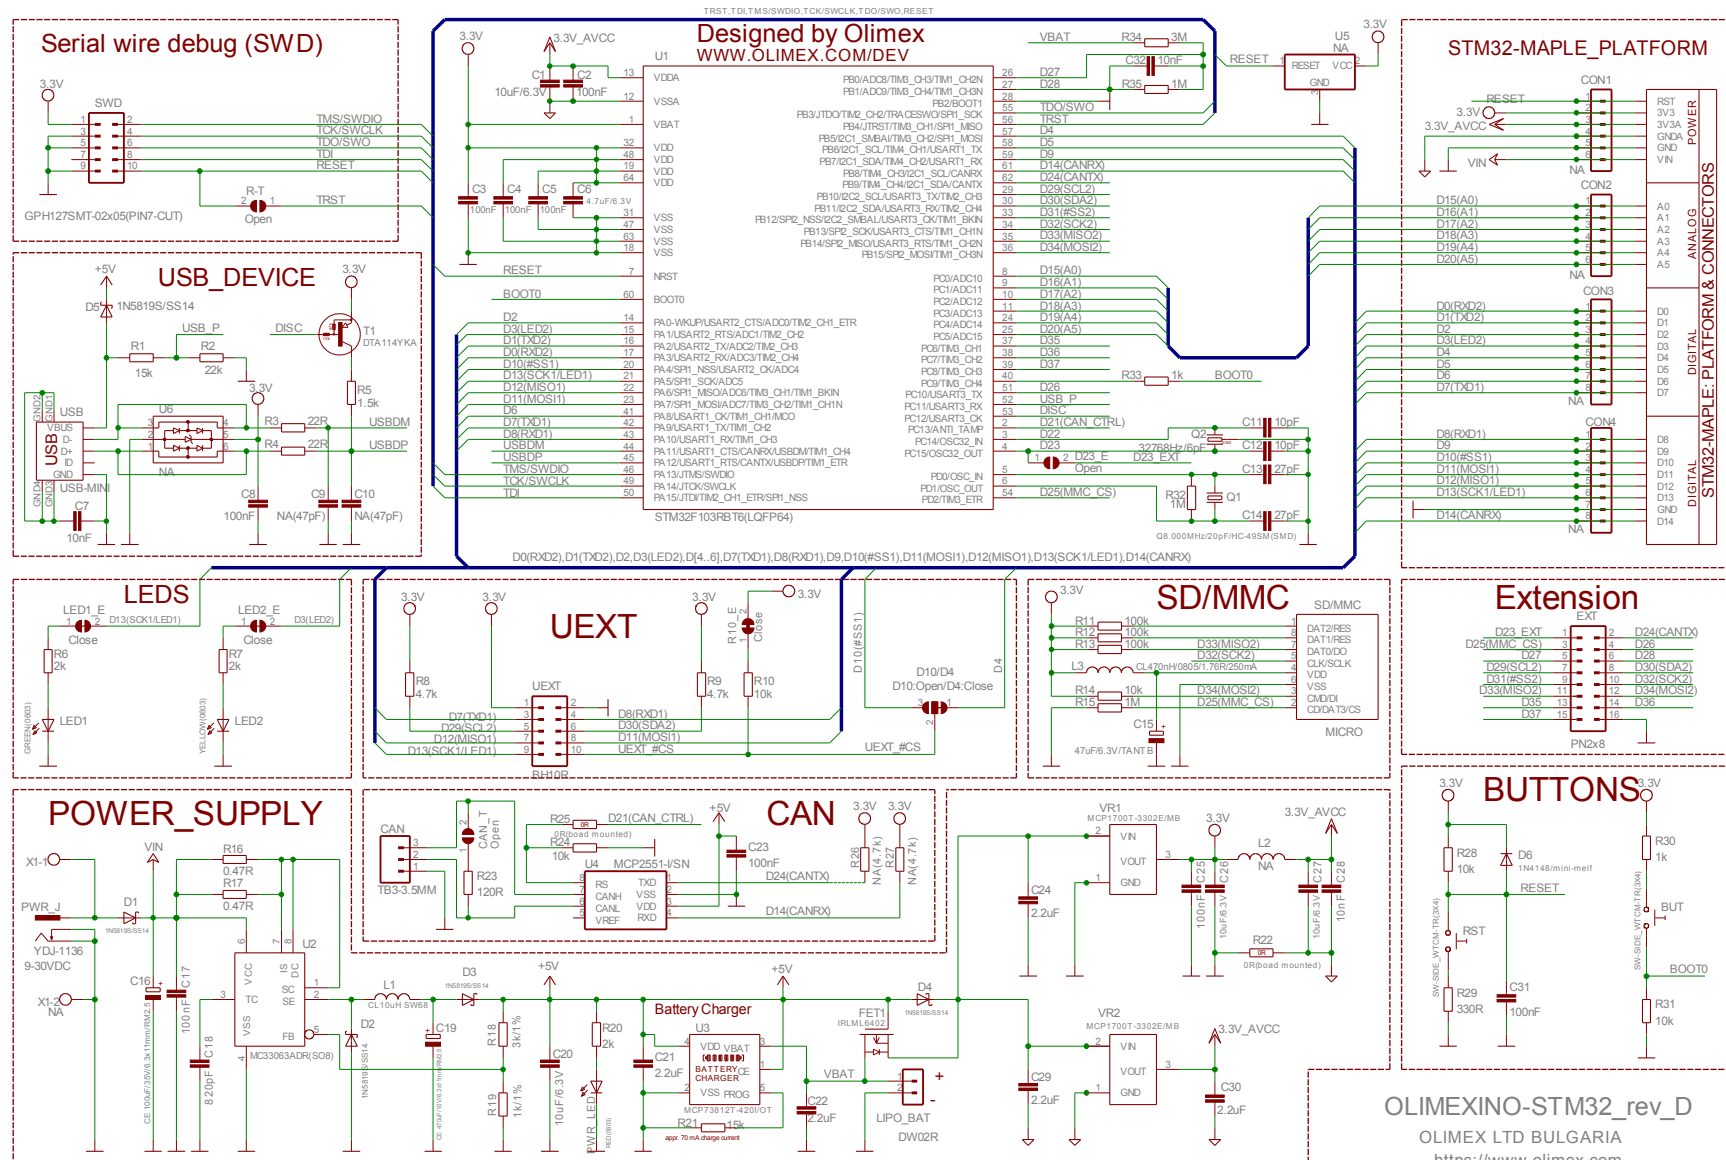

The OLIMEXINO-STM32 board is shipped in protective anti-static packaging. The board must not be subject to high electrostatic potentials. General practice for working with static sensitive devices should be applied when working with this board.

BOARD USE REQUIREMENTS:

Cables: You'll need mini USB cable for connecting the board to PC. For programming - the cable you will need depends on the programmer/debugger you use. If you use ARM-USB-TINY or ARM-USB-TINY-H, you will need USB A-B cable, if you use ARM-USB-OCD or ARM-USB-OCD-H, you will need USB A-B cable and RS232 cable.

Hardware: Programmer/Debugger [ARM-USB-OCD](#), [ARM-USB-OCD-H](#), [ARM-USB-TINY](#), [ARM-USB-TINY-H](#), [ARM-JTAG-COOCOX](#) or other compatible programming/debugging tool if you work with EW-ARM. You will also need ARM-JTAG-20-10 adapter for programming the board since the JTAG connector is the small one (0.05" step).

SCHEMATIC:

BOARD LAYOUT:

POWER SUPPLY CIRCUIT:

OLIMEXINO-STM32 can take power supply from:

- external power supply (9-30) VDC.
- + 5V from USB
- 3.7 V Li-ion battery

The programmed board power consumption is about 50 mA with all peripherals enabled.

RESET CIRCUIT:

OLIMEXINO-STM32 reset circuit includes D6 (1N4148), R28 (10kΩ), R29 (330Ω), C31 (100nF), STM32F103RBT6 pin 7 (NRST) and RESET button.

CLOCK CIRCUIT:

Quartz crystal **Q1** 8 MHz is connected to STM32F103RBT6 pin 5 (PD0/OSC_IN) and pin 6 (PD1/OSC_OUT).

Quartz crystal **Q2** 32.768 kHz is connected to STM32F103RBT6 pin 3 (PC14/OSC32_IN) and pin 4 (PC15/OSC32_OUT).

JUMPER DESCRIPTION:

Note that all jumpers on the board are SMD type. You will need to solder/unsolder/cut them in order to reconfigure them.

LED1_E

This jumper, when is closed, enables LED1.

Default state is closed.

LED2_E

This jumper, when is closed, enables LED2.

Default state is closed.

D23_E

This jumper, when is closed, connects STM32F103RBT6 pin (PC15/OSC32_OUT) – signal D23 to EXT pin 1, and when is opened, D23 is not connected to EXT.

Default state is opened.

R-T

This jumper, when is closed, connects TRST and RESET, and when is opened, TRST and RESET are separated.

CAN_T

Default state is opened.

This jumper, when is closed, CAN termination is enabled, and when is opened, CAN termination is disabled.

Default state is opened.

D10/D4

This jumper, when is in position D10, UEXT pin 10 (UEXT_#CS) is connected to STM32F103RBT6 pin 20 (PA4/SPI1_NSS/USART2_CK/ADC4) – signal D10, and when is in position D4, UEXT pin 10 (UEXT_#CS) is connected to STM32F103RBT6 pin 57 (PB5/I2C1_SMBAL/TIM3_CH2/SPI1_MOSI) – signal D4. Note that P10_E's effect also is affected by D10/D4.

Default state is in position D4.

P10_E:

When closed the board provides 3.3V to the UEXT_CCS – UEXT pin 10.

Default state is closed.

INPUT/OUTPUT:

Status Led with name **LED1 (green)** connected via jumper LED1_E to STM32F103RBT6 pin 21 (PA5/SPI1_SCK/ADC5) – signal D13(SCK/LED1).

Status Led with name **LED2 (yellow)** connected to STM32F103RBT6 pin 15 (PA1/USART2_RTS/ADC1/TIM2_CH2) – signal D3(LED2).

Power-on LED (red) with name **PWR_LED** – this LED shows that the board is power supplied.

User button with name **BUT** connected to **STM32F103RBT6** pin 40 (PC9/TIM3_CH4) via R33 (1kΩ) and pin 60 (BOOT0) – signal BOOT0.

User button with name **RST** connected to STM32F103RBT6 pin 7 (NRST).

EXTERNAL CONNECTORS DESCRIPTION:

SWD:

Pin #	Signal Name
1	VCC
2	TMS/SWDIO
3	GND
4	TCK/SWCLK
5	GND
6	TDO/SWO
7	Cut off
8	TDI
9	GND
10	RESET

Note that pin 7 of SWD connector is cut off.

UEXT:

Pin #	Signal Name
1	VCC
2	GND
3	D7(TXD1)
4	D8(RXD1)
5	D29(SCL2)
6	D30(SDA2)
7	D12(MISO1)
8	D11(MOSI1)
9	D13(SCK/LED1)D13(SCK1/LED1)
10	UEXT_#CS

PWR JACK:

Pin #	Signal Name
1	Power Input
2	GND

CON1 - POWER:

Pin #	Signal Name
1	RESET
2	VCC (3V3)
3	VDD (3V3A)
4	GND
5	GND
6	VIN

CON2 - ANALOG:

Pin #	Signal Name
1	D15(A0)
2	D16(A1)
3	D17(A2)
4	D18(A3)
5	D19(A4)
6	D20(A5)

CON3 - DIGITAL:

Pin #	Signal Name
1	D0(RXD2)
2	D1(TXD2)
3	D2
4	D3(LED2)
5	D4
6	D5
7	D6
8	D7(TXD1)

CON4 - DIGITAL:

Pin #	Signal Name
1	D8(RXD1)
2	D9
3	D10(#SS1)
4	D11(MOSI1)
5	D12(MISO1)
6	D13(SCK/LED1) D13(SCK1/LED1)
7	GND
8	D14(CANRX)

LI BAT:

Pin #	Signal Name
1	VBAT
2	GND

USB:

Pin #	Signal Name
1	+5V_USB
2	D -
3	D +
4	Not connected
5	GND

SD/MMC:

Pin #	Signal Name
1	MCIDAT2
2	D25(MMC_CS)
3	D34(MOSI2)
4	MMC_PWR
5	D32(SCK2)
6	GND
7	D33(MISO2)
8	MCIDAT1
9	Not connected
10	Not connected
11	Not connected
12	Not connected

EXT:

Pin #	Signal Name	Pin #	Signal Name
1	D23_EXT	2	D24(CANTX)
3	D25(MMC_CS)	4	D26
5	D27	6	D28
7	D29(SCL2)	8	D30(SDA2)
9	D31(#SS2)	10	D32(SCK2)
11	D33(MISO2)	12	D34(MOSI2)
13	D35	14	D36
15	D37	16	GND

CAN:

Pin #	Signal Name
1	GND
2	CANL
3	CANH

MECHANICAL DIMENSIONS:

AVAILABLE DEMO SOFTWARE:

- The board comes with a simple program on-board. To get more projects, examples and ready made libraries please visit the OLIMEXINO-STM32 page:
<https://www.olimex.com/Products/Duino/STM32/OLIMEXINO-STM32/>

ORDER CODE:

OLIMEXINO-STM32 - assembled and tested board

How to order?

You can order to us directly or by any of our distributors.
Check our web <https://www.olimex.com> for more info.

Board revision history:

Revision	Notable Changes
A	<ul style="list-style-type: none">- C6 (100n/0603) is changed to 4.7uF/0603.
B	<ul style="list-style-type: none">- Removed the label "<c> 2011".- Logos added: Open Hardware, Designed by OLIMEX and Made in Bulgaria, 2011 logos- Added divider which includes R34, R35 and C32 with aim to measure the battery.- All tracks which were placed close to board's edges were moved as far as possible away from them.- Some changes in the values of some components were made
C	<ul style="list-style-type: none">- Added closed by default SMD jumpers on LED2 and R10(UEXT_CS)lines- The table with the jumper description is now updated- Some logos and print lines have been re-arranged
D	<ul style="list-style-type: none">- Added again the PWR JACK connector for the external supply in the board design and schematic

Document revision history:

Revision	Changes	Modified Page#
A	<ul style="list-style-type: none">- At first page "Copyright(c) 2011, OLIMEX Ltd, All rights reserved" is replaces with "Designed by OLIMEX Ltd., 2011"- Updated schematic with board revision A	1
B	<ul style="list-style-type: none">- Updated schematics with board revision B and table	6, 11
C	<ul style="list-style-type: none">- Fixed grammatical errors- Updated schematics with board revision D- Added board revision history- Updated schematics- Added new jumpers description- Updated disclaimer	All

It is possible that the pictures in this manual differ from the latest revision of the board.

The product described in this document is subject to continuous development and improvements. All particulars of the product and its use contained in this document are given by OLIMEX in good faith. However all warranties implied or expressed including but not limited to implied warranties of merchantability or fitness for purpose are excluded. This document is intended only to assist the reader in the use of the product. OLIMEX Ltd. shall not be liable for any loss or damage arising from the use of any information in this document or any error or omission in such information or any incorrect use of the product.

This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by OLIMEX to be a finished end-product fit for general consumer use. Persons handling the product must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards.

Olimex currently deals with a variety of customers for products, and therefore our arrangement with the user is not exclusive. Olimex assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.

THERE IS NO WARRANTY FOR THE DESIGN MATERIALS AND THE COMPONENTS USED TO CREATE OLIMEXINO-STM32. THEY ARE CONSIDERED SUITABLE ONLY FOR OLIMEXINO-STM32.

For product support, hardware information and error reports mail to: support@olimex.com. Note that we are primarily a hardware company and our software support is limited.

Please consider reading the paragraph below about the warranty of Olimex products.

Warranty and returns:

Our boards have lifetime warranty against manufacturing defects and components.

During development work it is not unlikely that you can burn your programmer or development board. This is normal, we also do development work and we have damaged A LOT of programmers and boards during our daily job so we know how it works. If our board/programmer has worked fine then stopped, please check if you didn't apply over voltage by mistake, or shorted something in your target board where the programmer was connected etc. Sometimes boards might get damaged by ESD shock voltage or if you spill coffee on them during your work when they are powered.

Please note that warranty do not cover problems caused by improper use, shorts, over-voltages, ESD shock etc.

If the board has warranty label it should be not broken. Broken labels void the warranty, same applies for boards modified by the customer, for instance soldering additional components or removing components - such boards will be not be a subject of our warranty.

If you are positive that the problem is due to manufacturing defect or component you can return the board back to us for inspection.

When we receive the board we will check and if the problem is caused due to our fault and we will repair/replace the faulty hardware free of charge, otherwise we can quote price of the repair.

Note that all shippings back and forth have to be covered by the customer. Before you ship anything back you need to ask for RMA. When you ship back please attach to it your shipping address, phone, e-mail, RMA# and brief description of the problem. All boards should be sent back in antistatic package and well packed to prevent damages during the transport.
