

**2.5V, 3.2Gbps Differential 4:1 LVDS
Multiplexer with 1:2 Fanout and Internal
Termination**

General Description

The SY89546U is a precision, High-speed 4:1 differential multiplexer that provides two copies of the selected input. The high speed LVDS (350mV) compatible outputs with a guaranteed throughput of up to 3.2Gbps over temperature and voltage.

The SY89546U differential inputs include Micrel's unique 3-pin internal termination design that allows access to the termination network through a VT pin. This feature allows the device to easily interface to different logic standards, both AC- and DC-coupled without external resistor-bias and termination networks. The result is a clean, stub-free, low jitter interface solution.

The SY89546U operates from a single 2.5V supply, and is guaranteed over the full industrial temperature range (-40°C to $+85^{\circ}\text{C}$). For applications that require a 3.3V supply, consider the SY89547L. Or, for applications that only require one differential output, consider the SY89544U or SY89545L. The SY89546U is part of Micrel's Precision Edge® product family.

Data sheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Features

- Selects among four differential inputs
- Provides two copies of the selected input
- Guaranteed AC parameters over temp/voltage:
 - DC-to >3.2Gbps data rate throughput
 - <620ps In-to-Out t_{pd}
 - <150ps t_r/t_f time
- Unique input isolation design minimize crosstalk
- Ultra-low jitter design:
 - <1ps_{RMS} random jitter
 - <10ps_{PP} deterministic jitter
 - <10ps_{PP} total jitter (clock)
 - <0.7ps_{RMS} crosstalk-induced jitter
- Internal input termination
- Unique input termination and VT pin accepts DC-coupled and AC-coupled inputs (LVDS, LVPECL, CML)
- 350mV LVDS output swing
- Power supply 2.5V $\pm 5\%$
- -40°C to $+85^{\circ}\text{C}$ temperature range
- Available in 32-pin (5mmx5mm) MLF® package

Applications

- SONET/SDH multi-channel select applications
- Fibre Channel applications
- GigE application

Typical Performance

Functional Block Diagram

Ordering Information⁽¹⁾

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY89546UMI	MLF-32	Industrial	SY89546U	Sn-Pb
SY89546UMITR ⁽²⁾	MLF-32	Industrial	SY89546U	Sn-Pb
SY89546UMG ⁽³⁾	MLF-32	Industrial	SY89546U with Pb-Free bar-line indicator	Pb_Free NiPdAu
SY89546UMGTR ^(2,3)	MLF-32	Industrial	SY89546U with Pb-Free bar-line indicator	Pb_Free NiPdAu

Notes:

1. Contact factory for die availability. Dice are guaranteed at TA = 25°C, DC Electricals only.
2. Tape and Reel.
3. Recommended for new designs.

Pin Configuration

32-Pin MLF®

Pin Description

Pin Number	Pin Name	Pin Function
4, 2, 21, 32, 30, 27, 25, 23, 21	IN0, /IN0 IN1, /IN1 IN2, /IN2 IN3, /IN3	Differential Inputs: These inputs pairs are the differential signal inputs to the device. Inputs accept AC- or DC-coupled signals as small as 100mV. Each pin of a pair internally terminates to a V_T pin through 50 Ω . Note that these inputs will default to an indeterminate state if left open. Unused differential input pairs can be terminated by connecting one input to V_{CC} and the complementary input to GND through a 1k Ω resistor. The V_T pin is to be left open in this configuration. Please refer to the “input Interface Applications” section for more details.
3, 31, 26, 22	VT0, VT1, VT2, VT3	Input Termination Center-Tap: Each side of the differential input pair, terminates to a V_T pin. The V_{TA0} , V_{TA1} , V_{TB0} , V_{TB1} pins provide a center-tap to a termination network for maximum interface flexibility. See “input Interface Applications” section for more details.
6, 19	SEL0, SEL1	These single-ended TTL/CMOS-compatible inputs select the inputs to the multiplexers. Note that these inputs are internally connected to a 25k Ω pull-up resistor and will default to a logic HIGH state if left open. Input switching threshold is $V_{CC}/2$.
1, 5, 8, 17, 20, 24, 28, 29	VCC	Positive Power Supply: Bypass with 0.1 μ F 0.01 μ F low ESR capacitors.
10, 11, 14, 15	Q0, /Q0 Q1, /Q1	Differential Outputs: These LVDS outputs pairs are the outputs of the device. They are a logic function of the INA0, INA1, INB0, INB1 and SELA and SELB inputs. Please refer to the “Truth Table” for details. If an output is not used, it must be terminated with 100 Ω across the differential pair.
7, 9, 12, 13, 16, 18	GND, Exposed pad	Ground: Ground pin and exposed pad must be connected to the same ground plane.

Absolute Maximum Ratings⁽¹⁾

Supply Voltage (V_{CC})	–0.5V to +4.0V
Input Voltage (V_{IN})	–0.5V to V_{CC}
Termination Current ⁽³⁾	
Source or sink current on VT	±100mA
Input Current	
Source or sink current on VT	±50mA
Lead Temperature (soldering, 20sec.)	+260°C
Storage Temperature (T_s)	–65°C to +150°C

Operating Ratings⁽²⁾

Supply Voltage (V_{CC})	2.375V to 2.625V
Ambient Temperature (T_A)	–40°C to +85°C
Package Thermal Resistance ⁽⁴⁾	
MLF® (θ_{JA})	
Still Air, multi-layer PCB	35°C/W
500lfpm, multi-layer PCB	28°C/W
MLF® (Ψ_{JA})	
Junction-to-Board	20°C/W

DC Electrical Characteristics⁽⁵⁾

–40°C ≤ T_A ≤ +85°C, unless stated otherwise.

Symbol	Parameter	Condition	Min	Typ	Max	Units
V_{CC}	Power Supply		2.375	2.5	2.625	V
I_{CC}	Power Supply Current	No Load, Max. V_{CC} ⁽⁶⁾		75	100	mA
R_{DIFF_IN}	Differential Input Resistance (IN-to-/IN)		80	100	120	Ω
R_{IN}	Input Resistance (IN-to- V_T , /IN-to- V_T)		40	50	60	Ω
V_{IH}	Input High Voltage (IN, /IN)		1.2		V_{CC}	V
V_{IL}	Input Low Voltage (IN, /IN)		0		$V_{IH}-0.1$	V
V_{IN}	Input Voltage Swing (IN, /IN)	Note 7	0.1		V_{CC}	V
V_{DIFF_IN}	Differential Input Voltage Swing IN – /IN	Note 7	0.2			V
IN-to- V_T		Note 7			1.8	V

Notes:

1. Permanent device damage may occur if “Absolute Maximum Ratings” are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to “Absolute Maximum Ratings” conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Due to the limited drive capability use for input of the same package only.
4. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential (GND) on the PCB. Ψ_{JA} uses 4-layer θ_{JA} in still-air unless otherwise stated.
5. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
6. Includes current through internal 50Ω pull-ups.
7. See “Single-Ended and Differential Swings” section for V_{IN} and V_{DIFF_IN} definition.

LVDS Outputs DC Electrical Characteristics⁽⁹⁾

$V_{CC} = 2.5V \pm 5\%$; $-40^{\circ}C \leq T_A \leq +85^{\circ}C$, $R_L = 100\Omega$ across Q and /Q, unless stated otherwise.

Symbol	Parameter	Condition	Min	Typ	Max	Units
V_{OH}	Output HIGH Voltage (Q, /Q)	See Figure 5a				V
V_{OL}	Output LOW Voltage (Q, /Q)	See Figure 5a	0.925			V
V_{OUT}	Output Voltage Swing (Q, /Q)	See Figure 1a, 5a	250	350		mV
$V_{DIFF-OUT}$	Differential Output Voltage Swing $ Q - /Q $	See Figure 1b	500	700		mV
V_{OCM}	Output common Mode Voltage (Q, /Q)	See Figure 5b	1.125		1.275	V
ΔV_{OCM}	Change in Common Mode Voltage (Q, /Q)	See Figure 5b	-50		+50	mV

LVTTL/CMOS DC Electrical Characteristics⁽⁹⁾

$V_{CC} = 2.5V \pm 5\%$, $-40^{\circ}C \leq T_A \leq +85^{\circ}C$, unless stated otherwise.

Symbol	Parameter	Condition	Min	Typ	Max	Units
V_{IH}	Input HIGH Voltage		2.0		V_{CC}	V
V_{IL}	Input LOW Voltage				0.8	V
I_{IH}	Input HIGH Current				40	μA
I_{IL}	Input LOW Current				-300	μA

Notes:

1. The circuit is the designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

AC Electrical Characteristics ⁽¹⁰⁾

$V_{CC} = 2.5V \pm 5\%$; $-40^{\circ}C \leq T_A \leq +85^{\circ}C$, $R_L = 100\Omega$ across Q and /Q, unless stated otherwise.

Symbol	Parameter	Condition	Min	Typ	Max	Units
f_{MAX}	Maximum Operating Frequency	NRZ Data	3.2			Gbps
		$V_{OUT} \geq 200mV$ Clock	3	4		GHz
t_{PD}	Differential Propagation Delay	IN-to-Q	330	430	530	ps
		SEL-to-Q	200	400	700	ps
t_{SKEW}	Input-to-Input Skew	Note 11		4	20	ps
	Output-to- Output Skew	Note 12		8	20	ps
	Part-to-Park Skew	Note 13			200	ps
t_{JITTER}	Data Random Jitter (RJ)	Note 14			1	ps _{RMS}
	Deterministic Jitter (DJ)	Note 15			10	ps _{PP}
	Clock Total Jitter (TJ)	Note 16			10	ps _{PP}
	Cycle-to-Cycle Jitter	Note 17			1	ps _{RMS}
Crosstalk	Crosstalk-Induced Jitter	Note 18			0.7	ps _{RMS}
t_r, t_f	Output Rise/Fall Time (20% to 80%)	At full output swing	35	80	150	ps

Notes:

1. Measured with 100mV input swing. See "Timing Diagrams" section for definition of parameters. High frequency AC parameters are guaranteed by design and characterization.
2. Input-to-input skew is the difference in time from an input-to-output in comparison to any other input-to-output. In addition, the input-to-input skew does not include the output skew.
3. Output-to-output skew is measured between two different outputs under identical input transitions.
4. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs. Total skew is calculated as the RMS (Root Mean Square) of the input skew and output skew.
5. Random jitter is measured with a K28.7 comma detect character pattern, measured at 1.25Gbps and 3.2Gbps.
6. Deterministic jitter is measured at 1.25Gbps and 3.2Gbps, with both K28.5 and $2^{23}-1$ PRBS pattern.
Total jitter definition: with an ideal clock input of frequency $\leq f_{MAX}$, no more than one output edge in 10^{12} output edges will deviate by more than the specified peak-to-peak jitter value.
7. Cycle-to-cycle jitter definition: the variation of periods between adjacent cycles, $T - T_{n-1}$, where T is the time between rising edges of the output cycle.
8. Crosstalk is measured at the output while applying two similar clock frequencies to adjacent inputs that are asynchronous with respect to each other at the inputs.

Output Interface Applications

LVDS specifies a small swing of 350mV typical, on a nominal 1.25V common mode above ground. The common mode voltage has tight limits to permit large variations in

ground between an LVDS driver and receiver. Also, change in common mode voltage, as a function of data input, is kept to a minimum, to keep EMI low.
