Soldering Instructions

- Soldering temperature should be controlled under 320 and soldering time for each terminal should be 1~2 sec..
- Microphone should be fixed on the metal block (heat sink), which has high radiation effects, and heat sink shall contact with MIC tightly.
- Microphone may easily be destroyed by the static electricity. All countermeasure for eliminating static electricity must be executed (worktable and human body shall be ground connection)

Testing Procedure

- Measure the microphones under standard operating condition.
- Put the microphone and standard microphone face to the sound source (speaker), the distance between sound source and microphone & standard microphone is 50cm. And keep the center distance 5cm between them to ensure that the change of sound pressure should be kept within ± 1 dB.
- Keep the sound source pressure within ± 1 dB from speaker Measured by standard microphone.

The sensitivity of microphone can obtain its output voltage when sound source kept within 1,000Hz & 0.1Pa.
