Description

The MAAP-010168 is a two stage MMIC power amplifier designed for broadband high power applications. It can be used as either a driver or an output stage amplifier. This device is fully matched input and output to 50 Ω which eliminates any sensitive external RF tuning components.

The device is packaged in a lead free 10-lead flanged package for high volume manufacturing.

The MAAP-010168 is fabricated using a high reliability pHEMT process, to realize good power added efficiency and gain. The pHEMT process features full passivation for high performance and reliability.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

* Restrictions on Hazardous Substances,
European Union Directive 2002/95/EC.

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.
- Operating at nominal conditions with $T_J \leq +150$ °C will ensure MTTF > 1×10^6 hours.
- Junction Temperature (T_J) = $T_C + \Theta_{JC} * ((V * I) - (P_{OUT} - P_{IN}))$
Typical thermal resistance (Θ_{JC}) = 2.0°C/W
 - For $T_C = 25$ °C @ 1.5 GHz
 $T_J = +80$ °C @ +10 V, 4000 mA, $P_{OUT} = 41$ dBm, $P_{IN} = 21$ dBm
 - For $T_C = 85$ °C @ 1.5 GHz
 $T_J = +138$ °C @ +10 V, 3900 mA, $P_{OUT} = 41$ dBm, $P_{IN} = 21$ dBm

Recommended Bias Configuration

Operating the MAAP-010168

The MAAP-010168 is static sensitive. Please handle with care. To operate the device, follow these steps. Ramp down or shutdown in reverse order (gate bias on first and off last). All V_{GG} pins should have the same voltage applied at all times.

- Apply V_{GG} (-1.5 V).
- Apply V_{DD} (10.0 V Typical).
- Set I_{DQ} by adjusting V_{GG} .
- Apply RF_{IN} .
