

DATA SHEET

SKY13491-21: 0.7 to 2.7 GHz SP14T MIPI® Antenna Switch Module

Applications

- 2G/3G/4G multimode cellular handsets (LTE, UMTS, CDMA2000, EDGE, GSM, TDD-LTE, TD-SCDMA)
- Embedded data cards

Features

- Dedicated Band 7 TRX ports: 0.90 dB insertion loss @ 2.7 GHz
- High isolation and linearity
- Broadband frequency range: 0.7 to 2.7 GHz
- Twelve linear TRX ports
- Integrated low and high band GSM harmonic filters
- External MIPI select pin to enable multiple trigger controls
- Small MCM (22-pin, 2.5 x 2.9 x 0.8 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. SKY13491-21 Block Diagram

Description

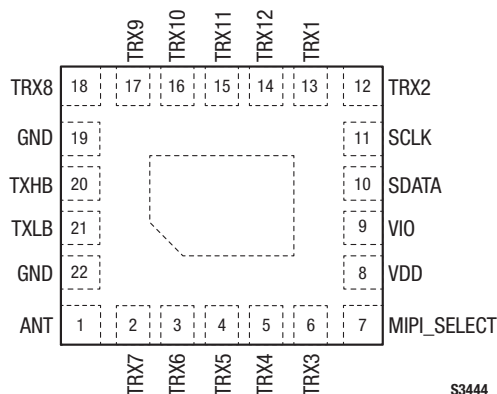

The SKY13491-21 is a Single-Pole, Fourteen-Throw (SP14T) antenna switch with an integrated Mobile Industry Processor Interface (MIPI®) controller. Using an advanced switching technology, the SKY13491-21 maintains low insertion and high isolation, which makes it an ideal choice for UMTS, CDMA2000, EDGE, GSM, and LTE applications.

The design features two dedicated GSM transmit ports and three dedicated ultra low-loss TRX ports. The switch also has an excellent triple beat ratio and 2nd/3rd Order Intermodulation Distortion (IMD2/IMD3) performance.

Switching is controlled by the MIPI decoder. There is an external MIPI select pin that enables how the switch responds to power mode triggers. When this pin is grounded, the switch responds to any of the power mode triggers. When this pin is left open, the switch responds to individual power mode triggers. No external DC blocking capacitors are required on the RF paths as long as no DC voltage is applied.

The SKY13491-21 is manufactured in a compact, 2.5 x 2.9 x 0.8 mm, 22-pin surface mount Multi-Chip Module (MCM) package.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

**Figure 2. SKY13491-21 Pinout – 22-Pin MCM
(Top View)**

Table 1. SKY13491-21 Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	ANT	Antenna port	12	TRX2	Ultra low-loss 3G WCDMA transmit/receive port 2. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
2	TRX7	3G WCDMA transmit/receive port 7. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.	13	TRX1	Ultra low-loss 3G WCDMA transmit/receive port 1. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
3	TRX6	3G WCDMA transmit/receive port 6. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.	14	TRX12	3G WCDMA transmit/receive port 12. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
4	TRX5	3G WCDMA transmit/receive port 5. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.	15	TRX11	3G WCDMA transmit/receive port 11. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
5	TRX4	3G WCDMA transmit/receive port 4. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.	16	TRX10	3G WCDMA transmit/receive port 10. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
6	TRX3	Ultra low-loss 3G WCDMA transmit/receive port 3. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.	17	TRX9	3G WCDMA transmit/receive port 9. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
7	MIPI_SELECT	MIPI interface select. When this pin is grounded, the switch responds to any of the power mode triggers. When this pin is left open, the switch is RFFE MIPI compliant and responds to individual power mode triggers.	18	TRX8	3G WCDMA transmit/receive port 8. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
8	VDD	DC power supply	19	GND	Ground
9	VIO	MIPI decoder enable/reference voltage	20	TXHB	GSM transmit high band. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
10	SDATA	Data input/output	21	TXLB	GSM transmit low band. This pin either connected directly to or is disconnected from pin 1, depending on the applied control data.
11	SCLK	Clock signal	22	GND	Ground

Note: Bottom ground paddles must be connected to ground.

Table 2. SKY13491-21 Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	VDD	2.5	6.0	V
MIPI decoder enable/reference voltage	VIO		2	V
Clock signal voltage	SCLK		VIO	V
Data signal voltage	SDATA		VIO	V
RF input power: LTX pin HTX pin All TRXx pins	PIN		+36 +34 +31	dBm dBm dBm
Storage temperature	TSTG	–55	+150	°C
Operating temperature	TOP	–30	+90	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13491-21 are provided in Table 2. Electrical specifications are provided in Tables 3 and 4.

IMD2 and IMD3 test conditions for various frequencies are listed in Tables 5 and 6, respectively.

Triple Beat Ratio (TBR) test conditions for bands 2 and 5 are listed in Table 7.

Figure 3 shows a timing diagram. Figure 4 illustrates the test setup used to measure intermodulation products. This industry standardized test is used to simulate the WCDMA Band 1 linearity of the antenna switch. A +20 dBm Continuous Wave (CW) signal, f_{FUND} , is sequentially applied to the TRX1 through TRX12 ports, while a –15 dBm CW blocker signal, f_{BLK} , is applied to the ANT port.

The resulting 3rd Order Intermodulation Distortion (IMD3), f_{RX} , is measured over all phases of f_{FUND} . The SKY13491-21 exhibits exceptional performance for all TRXx ports.

Table 8 shows the isolation matrix for "Ant" to "Off" arms. Table 9 shows the isolation matrix for "On" Arms to "Off" arms. Table 10 provides the matrix of insertion loss and return loss information. Table 11 describes the register content and programming read/write sequences. Refer to the *MIPI Alliance Specification for RF Front-End Control Interface (RFFE)*, v1.10 (26 July 2011) for additional information on MIPI programming sequences and MIPI bus specifications.

Figures 5 and 6 provide the timing diagrams for register write commands and read commands, respectively.

Table 12 provides the Register_0 logic. Table 13 describes the register parameters and bit values.

Table 3. SKY13491-21 DC Electrical Specifications (Note 1)**(V_{DD} = 2.85 V, T_{OP} = +25 °C, Characteristic Impedance [Z₀] = 50 Ω, Unless Otherwise Noted)**

Parameter	Symbol	Test Condition	Min	Typical	Max	Units

Table 13. Register Description and Programming (1 of 2)

Register		Parameter	Description	Default (Binary)
Name	Address (Hex)			
Register_0	0000	MODE_CTRL	Bits[7:0]: Switch control. See Table 8 for logic	–
RFFE_STATUS	001A	SOFTWARE RESET	Bit[7]: Resets all data to default values except for USID, GSID, or the contents of the PM_TRIG Register. 0 = Normal operation 1 = Software reset	0
		COMMAND_FRAME_PARITY_ERR	Bit[6]: Command sequence received with parity error – discard command.	0
		COMMAND_LENGTH_ERR	Bit[5]: Command length error.	0
		ADDRESS_FRAME_PARITY_ERR	Bit[4]: Address frame parity error = 1.	0
		DATA_FRAME_PARITY_ERR	Bit[3]: Data frame with parity error.	0
		READ_UNUSED_REG	Bit[2]: Read command to an invalid address.	0
		WRITE_UNUSED_REG	Bit[1]: Write command to an invalid address.	0
		BID_GID_ERR	Bit[0]: Read command with a BROADCAST_ID (refer to the <i>MIPI Alliance Specification</i>) or GSID.	0
GROUP_SID	001B	Reserved	Bits[7:4]: Reserved	0000
		GSID	Bits[3:0]: Group slave ID	0000

Table 13. Register Description and Programming (2 of 2)

Register		Parameter	Description	Default (Binary)
Name	Address (Hex)			
PM_TRIG (Note 1)	001C	PWR_MODE	Bits[7:6]: 00 = Normal operation (active) 01 = Default settings (startup) 10 = Low power (low power) 11 = Reserved	01
		Trigger_Mask_2	Bit[5]: If this bit is set, trigger 2 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 2, the data goes directly to the destination register.	0
		Trigger_Mask_1	Bit[4]: If this bit is set, trigger 1 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 1, the data goes directly to the destination register.	0
		Trigger_Mask_0	Bit[3]: If this bit is set, trigger 0 is disabled. When all triggers are disabled, if writing to a register that is associated with trigger 0, the data goes directly to the destination register.	0
		Trigger_2	Bit[2]: If this bit is set, data is loaded into the trigger 2 registers.	0
		Trigger_1	Bit[1]: If this bit is set, data is loaded into the trigger 1 registers (unsupported).	0
		Trigger_0	Bit[0]: If this bit is set, data is loaded into the trigger 0 registers (unsupported).	0
PRODUCT_ID	001D	PRODUCT_ID	Bits[7:0]: This is a read-only register. However, during the programming of the Unique Slave Identifier (USID), a write command sequence is performed on this register but the value is not changed.	01011101
MANUFACTURER_ID	001E	MANUFACTURER_ID	Bits[7:0]: Read-only register	10100101
MAN_USID	001F	Reserved	Bits[7:6]: Reserved	00
		MANUFACTURER_ID	Bits[5:4]: Read-only register	01
		USID	Bits[3:0]: Programmable USID. A write to these bits programs the USID.	1011

Note 1: Unlike the complete independence between triggers 0, 1, and 2, and also between the associated trigger masks 0, 1, and 2, respectively (as described in the MIPI RFFE Specification), when pin 7 is grounded, this device uses additional interactions between the provided trigger functions.

The delayed application of updated data to all triggerable registers in this device may be accomplished using any of the three triggers (0, 1, or 2), provided that the particular trigger used is not currently masked off. If multiple triggers are enabled, any or all of those are sufficient to cause the data to be transferred from shadow registers to destination registers for all triggerable registers in the device.

It is also necessary to disable all three triggers (i.e., set all three trigger masks) to ensure that data written to any triggerable register will immediately be written to the destination register at the conclusion of the RFFE command sequence where the data is written.

Evaluation Board Description

The SKY13491-21 Evaluation Board is used to test the performance of the SKY13491-21 SP14T Switch. An Evaluation Board schematic diagram is provided in Figure 7. A recommended ESD protection circuit diagram is provided in Figure 8. An assembly drawing for the Evaluation Board is shown in Figure 9.

Package Dimensions

The PCB layout footprint for the SKY13491-21 is provided in Figure 10. Typical case markings are shown in Figure 11. Package dimensions for the 22-pin MCM are shown in Figure 12, and tape and reel dimensions are provided in Figure 13.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13491-21 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *PCB Design and SMT Assembly/Rework Guidelines for MCM-L Packages*, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
