GaAs HEMT MMIC MEDIUM POWER AMPLIFIER, 17 - 30 GHz

Typical Applications

This HMC-APH196 is ideal for:

- Point-to-Point Radios
- Point-to-Multi-Point Radios
- VSAT
- Military & Space

Features

Output IP3: +31 dBm
P1dB: +22 dBm
Gain: 20 dB @ 20 GHz
Supply Voltage: +4.5V
50 Ohm Matched Input/Output
Die Size: 3.3 x 1.95 x 0.1 mm

Functional Diagram

General Description

The HMC-APH196 is a two stage GaAs HEMT MMIC Medium Power Amplifier which operates between 17 and 30 GHz. The HMC-APH196 provides 20 dB of gain at 20 GHz, and an output power of +22 dBm at 1 dB compression from a +4.5V supply voltage. All bond pads and the die backside are Ti/Au metallized and the amplifier device is fully passivated for reliable operation. The HMC-APH196 GaAs HEMT MMIC Medium Power Amplifier is compatible with conventional die attach methods, as well as thermocompression and thermosonic wirebonding, making it ideal for MCM and hybrid microcircuit applications. All data Shown herein is measured with the chip in a 50 Ohm environment and contacted with RF probes.

Electrical Specifications, $T_A = +25^\circ \text{C}$, $V_{dd1} = V_{dd2} = 4.5\text{V}$, $I_{dd1} + I_{dd2} = 400 \text{ mA}$ [2]

Parameter	Min	Typ	Max	Min	Typ	Max	Min	Typ	Max	Units
Frequency Range	17 - 24			24 - 27			27 - 30			GHz
Gain	15	20		14	17		11	16		dB
Input Return Loss		17			17			17		dB
Output Return Loss		25			23			23		dB
Output Power for 1 dB Compression (P1dB)	20	22		20	22		20	22		dBm
Output Third Order Intercept (IP3)		31			31			31		dBm
Supply Current ($I_{dd1} + I_{dd2}$)		400			400			400		dBm

[1] Unless otherwise indicated, all measurements are from probed die

[2] Adjust $V_{gg1}=V_{gg2}$ between -1V to +0.3V (typ -0.5V) to achieve $I_{dd_{total}} = 400 \text{ mA}$

Pulsed Gain vs. Frequency

Pulsed P1dB vs. Frequency

Input Return Loss vs. Frequency

Output Return Loss vs. Frequency

Note: Measured Performance Characteristics (Typical Performance at 25°C) Vdd1 = Vdd2 = 4.5 V, Idd1 + Idd2 = 400 mA

GaAs HEMT MMIC MEDIUM POWER AMPLIFIER, 17 - 30 GHz

Absolute Maximum Ratings

Drain Bias Voltage	6 Vdc
Gate Bias Voltage	-1 to +0.3 Vdc
RF Input Power	10 dBm
Thermal Resistance (Channel to die bottom)	35.7 °C/W
Channel Temperature	180 °C
Storage Temperature	-65 °C to +150 °C
Operating Temperature	-55 °C to +85 °C
Drain Bias Current (stage 1)	176 mA
Drain Bias Current (stage 2)	440 mA

ELECTROSTATIC SENSITIVE DEVICE
OBSERVE HANDLING PRECAUTIONS

Outline Drawing

Die Packaging Information ^[1]

Standard	Alternate
GP-2 (Gel Pack)	[2]

[1] Refer to the "Packaging Information" section for die packaging dimensions.

[2] For alternate packaging information contact Hittite Microwave Corporation.

NOTES:

- ALL DIMENSIONS ARE IN INCHES [MM].
- TYPICAL BOND PAD IS .004" SQUARE.
- BACKSIDE METALLIZATION: GOLD.
- BACKSIDE METAL IS GROUND.
- BOND PAD METALLIZATION: GOLD.
- CONNECTION NOT REQUIRED FOR UNLABELED BOND PADS.
- OVERALL DIE SIZE ±.002"

For price, delivery, and to place orders, please contact Hittite Microwave Corporation:
20 Alpha Road, Chelmsford, MA 01824 Phone: 978-250-3343 Fax: 978-250-3373
Order On-line at www.hittite.com

**GaAs HEMT MMIC MEDIUM POWER
AMPLIFIER, 17 - 30 GHz**

Pad Descriptions

Pad Number	Function	Description	Interface Schematic
1	RFIN	This pad is AC coupled and matched to 50 Ohms.	RFIN ○— —
2, 4	Vgg1, Vgg2	Gate control for amplifier. Please follow "MMIC Amplifier Biasing Procedure" application note. See assembly for required external components.	Vgg1, Vgg2 ○— — — —
3, 5	Vdd1, Vdd2	Power Supply Voltage for the amplifier. See assembly for required external components.	Vdd1, Vdd2 ○— — — — —
6	RFOUT	This pad is AC coupled and matched to 50 Ohms.	— —○ RFOUT
Die Bottom	GND	Die bottom must be connected to RF/DC ground.	○ GND — —

AMPLIFIER, 17 - 30 GHz**

Assembly Diagram

Note 1: Bypass caps should be 100 pF ceramic (single-layer) placed no further than 30 mils from the amplifier

Note 2: Best performance obtained from use of <10 mil (long) by 3 by 0.5 mil ribbons on input and output.

GaAs HEMT MMIC MEDIUM POWER AMPLIFIER, 17 - 30 GHz

Mounting & Bonding Techniques for Millimeterwave GaAs MMICs

The die should be attached directly to the ground plane eutectically or with conductive epoxy (see HMC general Handling, Mounting, Bonding Note).

50 Ohm Microstrip transmission lines on 0.127mm (5 mil) thick alumina thin film substrates are recommended for bringing RF to and from the chip (Figure 1). If 0.254mm (10 mil) thick alumina thin film substrates must be used, the die should be raised 0.150mm (6 mils) so that the surface of the die is coplanar with the surface of the substrate. One way to accomplish this is to attach the 0.102mm (4 mil) thick die to a 0.150mm (6 mil) thick molybdenum heat spreader (moly-tab) which is then attached to the ground plane (Figure 2).

Microstrip substrates should be placed as close to the die as possible in order to minimize bond wire length. Typical die-to-substrate spacing is 0.076mm to 0.152 mm (3 to 6 mils).

Handling Precautions

Follow these precautions to avoid permanent damage.

Storage: All bare die are placed in either Waffle or Gel based ESD protective containers, and then sealed in an ESD protective bag for shipment. Once the sealed ESD protective bag has been opened, all die should be stored in a dry nitrogen environment.

Cleanliness: Handle the chips in a clean environment. DO NOT attempt to clean the chip using liquid cleaning systems.

Static Sensitivity: Follow ESD precautions to protect against ESD strikes.

Transients: Suppress instrument and bias supply transients while bias is applied. Use shielded signal and bias cables to minimize inductive pick-up.

General Handling: Handle the chip along the edges with a vacuum collet or with a sharp pair of bent tweezers. The surface of the chip may have fragile air bridges and should not be touched with vacuum collet, tweezers, or fingers.

Mounting

The chip is back-metallized and can be die mounted with AuSn eutectic preforms or with electrically conductive epoxy. The mounting surface should be clean and flat.

Eutectic Die Attach: A 80/20 gold tin preform is recommended with a work surface temperature of 255 °C and a tool temperature of 265 °C. When hot 90/10 nitrogen/hydrogen gas is applied, tool tip temperature should be 290 °C. DO NOT expose the chip to a temperature greater than 320 °C for more than 20 seconds. No more than 3 seconds of scrubbing should be required for attachment.

Epoxy Die Attach: Apply a minimum amount of epoxy to the mounting surface so that a thin epoxy fillet is observed around the perimeter of the chip once it is placed into position. Cure epoxy per the manufacturer's schedule.

Wire Bonding

RF bonds made with 0.003" x 0.0005" ribbon are recommended. These bonds should be thermosonically bonded with a force of 40-60 grams. DC bonds of 0.001" (0.025 mm) diameter, thermosonically bonded, are recommended. Ball bonds should be made with a force of 40-50 grams and wedge bonds at 18-22 grams. All bonds should be made with a nominal stage temperature of 150 °C. A minimum amount of ultrasonic energy should be applied to achieve reliable bonds. All bonds should be as short as possible, less than 12 mils (0.31 mm).
