

## PIN-PROGRAMMABLE PRECISION CLOCK MULTIPLIER

### Features

- Not recommended for new designs. For alternatives, see the Si533x family of products.
- Selectable output frequencies ranging from 19.44 to 1050 MHz
- Low jitter clock outputs w/jitter generation as low as 0.6 ps rms (50 kHz–80 MHz)
- Integrated loop filter with selectable loop bandwidth (150 kHz to 1.3 MHz)
- Four clock inputs w/manual or automatically controlled switching
- Five clock outputs with selectable signal format (LVPECL, LVDS, CML, CMOS)
- Support for ITU G.709 FEC ratios (255/238, 255/237, 255/236)
- LOS alarm outputs
- Pin-programmable settings
- On-chip voltage regulator for 1.8  $\pm$ 5%, 2.5 V  $\pm$ 10%, or 3.3 V  $\pm$ 10% operation
- Small size: 14 x 14 mm 100-pin TQFP
- Pb-free, RoHS compliant

### Applications

- SONET/SDH OC-48/STM-16 and STM-64/OC-192 line cards
- GbE/10GbE, 1/2/4/8/10GFC line cards
- ITU G.709 line cards
- Test and measurement

### Description

The Si5365 is a low-jitter, precision clock multiplier for high-speed communication systems, including SONET OC-48/OC-192, Ethernet, and Fibre Channel, in which the application requires clock multiplication without jitter attenuation. The Si5365 accepts four clock inputs ranging from 19.44 to 707 MHz and generates five frequency-multiplied clock outputs ranging from 19.44 to 1050 MHz. The input clock frequency and clock multiplication ratio are selectable from a table of popular SONET, Ethernet, and Fibre Channel frequencies. The Si5365 is based on Silicon Laboratories' 3rd-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The DSPLL loop bandwidth is digitally programmable, providing jitter performance optimization at the application level. Operating from a single 1.8, 2.5, or 3.3 V supply, the Si5365 is ideal for providing clock multiplication in high performance timing applications.

Broadband, 800 Hz to 80 MHz	420

## 2. Typical Application Schematic

- Notes:**
1. Assumes differential LVPECL termination (3.3 V) on clock inputs.
  2. Denotes tri-level input pins with states designated as L (ground), M (V<sub>DD</sub>/2), and H (V<sub>DD</sub>).
  3. Assumes manual input clock selection.

**Figure 4. Si5365 Typical Application Circuit**

### 3. Functional Description

The Si5365 is a low jitter, precision clock multiplier for high-speed communication systems, including SONET OC-48/OC-192, SDH STM-16/STM-64, Ethernet, and Fibre Channel, in which the application requires clock multiplication without jitter attenuation. The Si5365 accepts four clock inputs ranging from 19.44 to 707 MHz and generates five frequency-multiplied clock outputs ranging from 19.44 to 1050 MHz. By default the four clock inputs are at the same frequency and the five clock outputs are at the same frequency. Two of the output clocks can be divided down further to generate an integer sub-multiple frequency. The input clock frequency and clock multiplication ratio are selectable from a table of popular SONET, Ethernet, and Fibre Channel frequencies. In addition to providing clock multiplication in SONET and datacom applications, the Si5365 supports SONET-to-datacom frequency translations. Silicon Laboratories offers a PC-based software utility, DSPLL*sim*, that can be used to look up valid Si5365 frequency translations. This utility can be downloaded from <http://www.silabs.com/timing> (click on Documentation).

The Si5365 is based on Silicon Laboratories' 3rd-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The Si5365 PLL loop bandwidth is digitally programmable via the BWSEL[1:0] pins and supports a range from 150 kHz to 1.3 MHz. The DSPLL*sim* software utility can be used to calculate valid loop bandwidth settings for a given input clock frequency/clock multiplication ratio.

The Si5365 monitors all input clocks for loss-of-signal and provides a LOS alarm when it detects a missing clock.

In the case when the input clocks enter alarm conditions, the PLL will freeze the DCO output frequency near its last value to maintain operation with an internal state close to the last valid operating state.

The Si5365 has five differential clock outputs. The signal format of the clock outputs is programmable to support LVPECL, LVDS, CML, or CMOS loads. If not required, unused clock outputs can be powered down to minimize power consumption. For system-level debugging, a bypass mode is available which drives the output clock directly from the input clock, bypassing the internal DSPLL. The device is powered by a single 1.8, 2.5, or 3.3 V supply.

### 3.1. Further Documentation

Consult the Silicon Laboratories Any-Frequency Precision Clock Family Reference Manual (FRM) for detailed information about the Si5365. Additional design support is available from Silicon Laboratories through your distributor.

Silicon Laboratories has developed a PC-based software utility called DSPLL*sim* to simplify device configuration, including frequency planning and loop bandwidth selection. The FRM and this utility can be downloaded from <http://www.silabs.com/timing>; click on Documentation.

10	CKIN3													
11	CKIN4													
22	AUTOSEL	I	3-Level	<b>Manual/Automatic Clock Selection.</b> Three level input that selects the method of input clock selection to be used. L = Manual. M = Automatic non-revertive. H = Automatic revertive. This pin has a weak pullup and weak pulldown and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.										
29 30	CKIN4+ CKIN4-	I	MULTI	<b>Clock Input 4.</b> Differential clock input. This input can also be driven with a single-ended signal.										

Table 6. Si5365 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description
34 35	CKIN2+ CKIN2–	I	MULTI	<b>Clock Input 2.</b> Differential input clock. This input can also be driven with a single-ended signal.
37	DBL2_BY	I	3-Level	<b>CKOUT2 Disable/PLL Bypass Mode Control.</b> Controls enable of CKOUT2 divider/output buffer path and PLL bypass mode. L = CKOUT2 Enabled. M = CKOUT2 Disabled. H = BYPASS Mode with CKOUT2 enabled. Bypass is not available with CMOS outputs. This pin has a weak pullup and weak pulldown and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.
39 40	CKIN3+ CKIN3–	I	MULTI	<b>Clock Input 3.</b> Differential clock input. This input can also be driven with a single-ended signal.
44 45	CKIN1+ CKIN1–	I	MULTI	<b>Clock Input 1.</b> Differential clock input. This input can also be driven with a single-ended signal.
50	DBL5	I	3-Level	<b>CKOUT5 Disable.</b> This pin performs the following functions: L = Normal operation. Output path is active and signal format is determined by SFOUT inputs. M = CMOS signal format. Overrides SFOUT signal format to allow CKOUT5 to operate in CMOS format while the clock outputs operate in a differential output format. H = Powerdown. Entire CKOUT5 divider and output buffer path is powered down. CKOUT5 output will be in tristate mode during powerdown. This pin has a weak pullup and weak pulldown and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.
56	FOS_CTL	I	3-Level	<b>Frequency Offset Control.</b> This pin enables or disables use of the CKIN2 FOS reference as an input to the clock selection state machine. L = FOS Disabled. M = Stratum 3/3E FOS Threshold. H = SONET Minimum Clock FOS Threshold. This pin has both weak pullups and weak pulldowns and defaults to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.
58	C1A	O	LVC MOS	<b>CKIN1 Active Clock Indicator.</b> This pin serves as the CKIN1 active clock indicator. 0 = CKIN1 is not the active input clock. 1 = CKIN1 is currently the active input clock to the PLL.
59	C2A	O	LVC MOS	<b>CKIN2 Active Clock Indicator.</b> This pin serves as the CKIN2 active clock indicator. 0 = CKIN2 is not the active input clock. 1 = CKIN2 is currently the active input clock to the PLL.

**Table 6. Si5365 Pin Descriptions (Continued)**

Pin #	Pin Name	I/O	Signal Level	Description
60 61	BWSEL0 BWSEL1	I	3-Level	<p><b>Bandwidth Select.</b> These pins are three level inputs that select the DSPLL closed loop bandwidth according to the Any-Frequency Precision Clock Family Reference Manual. These pins have both weak pullups and weak pulldowns and default to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</p>
66 67	DIV34_0 DIV34_1	I	3-Level	<p><b>CKOUT3 and CKOUT4 Divider Control.</b> These pins control the division of CKOUT3 and CKOUT4 relative to the CKOUT2 output frequency. Detailed operations and timing characteristics for these pins may be found in the Any-Frequency Precision Clock Family Reference Manual. These pins have both weak pullups and weak pulldowns and default to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</p>
68 69 70 71	FRQSEL0 FRQSEL1 FRQSEL2 FRQSEL3	I	3-Level	<p><b>Multiplier Select.</b> These pins are three level inputs that select the input clock and clock multiplication setting according to the Any-Frequency Precision Clock Family Reference Manual, depending on the FRQTBL setting. These pins have both weak pullups and weak pulldowns and default to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</p>
77 78	CKOUT3+ CKOUT3-	O	MULTI	<p><b>Clock Output 3.</b> Differential output clock with a frequency specified by FRQSEL and FRQTBL settings. Output is differential for LVPECL, LVDS, and CML compatible modes. For CMOS format, both output pins drive identical single-ended clock outputs.</p>

Table 6. Si5365 Pin Descriptions (Continued)

Pin #	Pin Name	I/O	Signal Level	Description																				
80 95	SFOUT1 SFOUT0	I	3-Level	<p><b>Signal Format Select.</b> Three level inputs that select the output signal format (common mode voltage and differential swing) for all of the clock outputs except CKOUT5 (see DBL5).</p> <table border="1"> <thead> <tr> <th>SFOUT[1:0]</th> <th>Signal Format</th> </tr> </thead> <tbody> <tr> <td>HH</td> <td>Reserved</td> </tr> <tr> <td>HM</td> <td>LVDS</td> </tr> <tr> <td>HL</td> <td>CML</td> </tr> <tr> <td>MH</td> <td>LVPECL</td> </tr> <tr> <td>MM</td> <td>Reserved</td> </tr> <tr> <td>ML</td> <td>LVDS—Low Swing</td> </tr> <tr> <td>LH</td> <td>CMOS</td> </tr> <tr> <td>LM</td> <td>Disable</td> </tr> <tr> <td>LL</td> <td>Reserved</td> </tr> </tbody> </table> <p>Bypass mode is not available with CMOS outputs. When VDD = 3.3 V, for thermal reasons, there are restrictions on the number of LVPECL and CMOS outputs. See the Si53xx-RM reference manual for details. These pins have both weak pullups and weak pulldowns and default to M. Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</p>	SFOUT[1:0]	Signal Format	HH	Reserved	HM	LVDS	HL	CML	MH	LVPECL	MM	Reserved	ML	LVDS—Low Swing	LH	CMOS	LM	Disable	LL	Reserved

Pin #	Pin Name	I/O	Signal Level	Description
97 98	CKOUT4– CKOUT4+	O	MULTI	<b>Clock Output 4.</b> Differential output clock with a frequency specified by FRQSEL and FRQTBL settings. Output signal format is selected by SFOUT pins. Output is differential for LVPECL, LVDS, and CML compatible modes. For CMOS format, both output pins drive identical single-ended clock outputs.
GND PAD	GND PAD	GND	Supply	<b>Ground Pad.</b> The ground pad must provide a low thermal and electrical impedance to a ground plane.

## 5. Ordering Guide

Ordering Part Number	Package	ROHS6, Pb-Free	Temperature Range
Si5365-C-GQ*	100-Pin 14 x 14 mm TQFP	Yes	-40 to 85 °C
<b>*Note:</b> Not recommended for new designs. For alternatives, see the Si533x family.			

## 6. Package Outline: 100-Pin TQFP

Figure 5 illustrates the package details for the Si5365. Table 7 lists the values for the dimensions shown in the illustration.

**Figure 5. 100-Pin Thin Quad Flat Package (TQFP)**

**Table 7. 100-Pin Package Diagram Dimensions**

Dimension	Min	Nom	Max
A	—	—	1.20
A1	0.05	—	0.15
A2	0.95	1.00	1.05
b	0.17	0.22	0.27
c	0.09	—	0.20
D	16.00 BSC.		
D1	14.00 BSC.		
D2	3.85	4.00	4.15
e	0.50 BSC.		
E	16.00 BSC.		
E1	14.00 BSC.		
E2	3.85	4.00	4.15
L	0.45	0.60	0.75
aaa	—	—	0.20
bbb	—	—	0.20
ccc	—	—	0.08
ddd	—	—	0.08
⊖	0°	3.5°	7°

**Notes:**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.
3. This package outline conforms to JEDEC MS-026, variant AED-HD.
4. Recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

## 7. PCB Land Pattern

Figure 6. PCB Land Pattern Diagram

Table 8. PCB Land Pattern Dimensions

Dimension	MIN	MAX
e	0.50 BSC.	
E	15.40 REF.	
D	15.40 REF.	
E2	3.90	4.10
D2	3.90	4.10
GE	13.90	—
GD	13.90	—
X	—	0.30
Y	1.50 REF.	
ZE	—	16.90
ZD	—	16.90
R1	0.15 REF	
R2	—	1.00

**Notes:****General**

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

**Solder Mask Design**

5. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60  $\mu\text{m}$  minimum, all the way around the pad.

**Stencil Design**

6. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
7. The stencil thickness should be 0.125 mm (5 mils).
8. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
9. A 4 x 4 array of 0.80 mm square openings on 1.05 mm pitch should be used for the center ground pad.

**Card Assembly**

10. A No-Clean, Type-3 solder paste is recommended.
11. The recommended card reflow profile is per the JEDEC/IPC J-STD-020C specification for Small Body Components.

## 8. Top Marking

### 8.1. Si5365 Top Marking

### 8.2. Top Marking Explanation

<b>Mark Method:</b>	Laser	
<b>Logo Size:</b>	9.2 x 3.1 mm Center-Justified	
<b>Font Size:</b>	3.0 Point (1.07 mm) Right-Justified	
<b>Line 1 Marking:</b>	Device Part Number Si5365x-C-GQ	X = Speed Grade See "5. Ordering Guide" on page 21.
<b>Line 2 Marking:</b>	YY = Year WW = Workweek	Assigned by the Assembly Supplier. Corresponds to the year and work-week of the mold date.
	R = Die Revision	
	TTTTT = Mfg Code	Manufacturing Code
<b>Line 3 Marking:</b>	Circle = 1.8 mm Diameter Center-Justified	"e3" Pb-Free Symbol
	Country of Origin ISO Code Abbreviation	

## DOCUMENT CHANGE LIST

### Revision 0.32 to Revision 0.33

- Condensed format.

### Revision 0.33 to Revision 0.34

- Removed references to latency control, INC, and DEC pins.
- Updated Table 1, "Performance Specifications," on page 2.
- Changed LVTTTL to LVCMOS in Table 2, "Absolute Maximum Ratings," on page 3.
- Added Figure 1, "Typical Phase Noise Plot," on page 4.
- Updated Figure 4, "Si5365 Typical Application Circuit".
- Updated "4. Pin Descriptions: Si5365".
- Updated "5. Ordering Guide" on page 21.
- Added "7. PCB Land Pattern".

### Revision 0.34 to Revision 0.4

- Changed 1.8 V operating range to  $\pm 5\%$ .
- Updated Table 1 on page 2.
- Updated Table 2 on page 3.
- Added page 4.
- Updated "3. Functional Description" on page 13.
- Clarified "4. Pin Descriptions: Si5365" on page 14 including the addition of FOS\_CTL (pin 56).

### Revision 0.4 to Revision 0.5

- Changed "rate" to "frequency" throughout.
- Added Table of Contents.
- Reordered and expanded spec tables.
- Added 3.3 V operation.
- Added "8. Top Marking" on page 25.
- Added no bypass with CMOS outputs.
- Updated Table 2, "AC Specifications," on page 8.
- Updated Table 3, "Jitter Generation," on page 10.
- Updated "5. Ordering Guide" on page 21.

### Revision 0.5 to Revision 1.0

- Updated logo.
- Transitioned to full production.
