General Description

The HMC346LP3 & HMC346LP3E are pabsorp-tive Voltage Variable Attenuators (VVA) in low cost leadless surface mount plastic packages operating from DC - 14 GHz. It features an on-chip reference attenuator for use with an external op-amp to provide simple single voltage attenuation control, 0 to -3V. The device is ideal in designs where an analog DC control signal must control RF signal levels over a 30 dB amplitude range. This VVA is an excellent alterna-tive to the HMC121C8.

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 3, 7, 10, 12	GND	Package bottom has exposed metal paddle that must also be connected to PCB RF ground.	
2, 11	RF1 RF2	This pin is DC coupled and matched to 50 Ohm. Blocking capacitors are required if the RF line potential is not equal to 0V.	
4, 9, 13, 14, 15, 16	N/C	This pin should be connected to PCB RF ground.	
5, 8	V2, V1	Control input (master).	
6	I	Control input (slave).	

Single-Line Control Driver

External op-amp control circuit maintains impedance match while attenuation is varied. Input control ranges from 0 Volts (min. attenuation) to -3.0 Volts (max. attenuation.)

[2] Circuit Board Material: Rogers 4350

The circuit board used in the final application should be generated with proper RF circuit design techniques. Signal lines at the RF ports should be 50 ohm impedance and the package ground leads and package bottom should be connected directly to the PCB RF ground plane, similar to that shown above. The evaluation circuit board shown above is available from Hittite Microwave Corporation upon request.
