5. Exceeding any one or combination of these limits may cause permanent damage to this device.

MACOM does not recommend sustained operation near these survivability limits.

7. Operating at nominal conditions with $T_J \le +150^{\circ}C$ will ensure MTTF > 1 x 10⁶ hours.

Maximum Operating Ratings^{8,9}

| Parameter | Rating |
|-----------------------|----------------|
| P _{DISS} | 11.2 W |
| Junction Temperature | +150°C |
| Operating Temperature | -40°C to +85°C |

 Channel temperature directly affects device MTTF. Chanel temperature should be kept as low as possible to maximize lifetime. Thermal resistance, Ojc, is 5.8 °C/W.

9. For saturated performance, it is recommended that the sum of $(2V_{\rm DD}$ + abs $(V_{\rm GG}))$ < 15 V.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these CDM class 2, HBM class 1B devices.

Biasing -

All gates should be pinched-off ($V_G < -2 V$) before applying drain voltage ($V_D = 6 V$). Then the gate voltages can be increased until the desired quiescent drain current is reached in each stage. The recommended quiescent bias is $V_D = 6 V$, $I_D 1 = 190 \text{ mA}$, $I_D 2 = 380 \text{ mA}$ and $I_D 3 = 762 \text{ mA}$. The performance in this datasheet has been measured with fixed gate voltage and no drain current regulation under large signal operation. It is also possible to regulate the drain current dynamically, to limit the DC power dissipation under RF drive. To turn off the device, the turn on bias sequence should be followed in reverse.

Bias Arrangement -

Each DC pin (V_D 1,2,3 and V_G 1,2,3) needs to have bypass capacitance (120 pF and 10 nF) mounted as close to the MMIC as possible.

Power Detector -

As shown in the schematic below, the power detector is implemented by providing +5 V bias and measuring the difference in output voltage with standard op-amp in a differential mode configuration.
