

IN74LV244

OCTAL BUFFER/LINE DRIVER 3-STATE

The IN74LV244 is a low-voltage Si-gate CMOS device and is pin and function compatible with IN74HC/HCT244.

The IN74LV244 is an octal non-inverting buffer/line driver with 3-state outputs. The 3-state outputs are controlled by the output enable inputs $\overline{1OE}$ and $\overline{2OE}$. A HIGH on $\overline{nOE}$ causes the outputs to assume a high impedance OFF-state.

The IN74LV244 is identical to the IN74LV240 but has non-inverting outputs.

- Outputs Directly Interface to CMOS, NMOS, and TTL
- Operating Voltage Range: 1.2 to 3.6 V
- Low Input Current: 1.0 μ A, 0.1 μ A at T = 25 °C
- Output Current: 8 mA at $V_{CC} = 3.0$ V
- High Noise Immunity Characteristic of CMOS Devices

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V_{IN} and V_{OUT} should be constrained to the range $GND \leq (V_{IN} \text{ or } V_{OUT}) \leq V_{CC}$.

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V_{CC}). Unused outputs must be left open.
