Features:

- High Power UV LED with Peak Wavelengths between 365-405nm
- Industry standard 3.5mmx3.5mm package
- 130° viewing angle at 50% Iv
- Low Thermal Resistance - 3.4 C/W
- Built-in ESD Protection
- RoHS and REACH compliant

Applications

- Curing
- Adhesives
- Inks
- Plastic Products
- Wood Finish
- Photocatalytic air/water purification
- Analytic instrumentation
- Medical
- Diagnostics
- Fluorescence Imaging

SST-10 Binning Structure

SST-10 UV LEDs are tested for luminous flux and chromaticity at a drive current of 500mA - 20ms single pulse and placed into one of the following luminous flux (F) and chromaticity (WWW) bins:

Flux Bins - Test condition=500mA, 25°C, 20ms pulse

Flux Bin (F)	Minimum Flux (mW)	Maximum Flux (mW)
D	630	720
E	720	810
F	810	900
G	900	990
H	990	1080
I	1080	1170

Wavelength Bins - Test condition=500mA, 25°C, 20ms pulse

Wavelength Bin (WWW)	Minimum Wavelength (nm)	Maximum Wavelength (nm)
365	365	370
370	370	375
380	380	385
385	385	390
390	390	395
395	395	400
400	400	405
405	405	410

*Note: Luminus maintains a +/- 6% tolerance on flux measurements.

SST-10 Bin Kit Order Codes

The following table describes the bin kit ordering codes available for the SST-10 UV LEDs. Each bin kit specifies a minimum flux as well as specific chromaticity bins allowed. Please note that within each kit a maximum flux is not specified and as a result Luminus may ship any part meeting or exceeding the minimum flux specification. Shipments will always meet the listed chromaticity bins. For information on ordering bin kits not listed below, please contact Luminus.

SST-10 UV Bin Kit Order Codes

Wavelength Range	Luminous Flux		Chromaticity Bins	Kit Number
	Bin Kit Flux Code	Min. Flux		
365	E	720	365, 370	E365-00
385	F	810	380, 385	F385-00
395	F	810	390, 395	F395-00
405	F	810	400, 405	F405-00

Product Shipping & Labeling Information

All SST-10 products are packaged and labeled with their respective bin as outlined in the tables on pages 2 & 3. Each reel will only contain one bin.

Note 1: Ratings are based on operation at a constant junction temperature of $T_j = 25^\circ\text{C}$.

Note 2: To prevent damage, please refer to operating conditions and derating curves for appropriate maximum operating conditions

Note 3: Maximum operating case temperature combined with maximum drive current defines the total maximum operating condition for the device. To prevent damage, please follow derating curves for all operating conditions.

Note 4: Luminus SST-10-UV LEDs are designed for operation up to an absolute maximum forward drive current as specified above. Product lifetime data is specified at typical forward drive currents. Sustained operation at absolute maximum currents will result in a reduction of device lifetime compared to typical forward drive currents. Actual device lifetimes will also depend on junction temperature. Refer to the current vs. junction temperature derating curves for further information. In pulsed operation, rise time from 10-90% of forward current should be larger than 0.5 microseconds.

Note 5: Caution must be taken not to stare at the light emitted from these UV LEDs.

Precautions for Use

Storage:

1. Before opening the package

The LEDs should be kept at a temperature lower than 40° C and relative humidity lower than 90%. The LEDs should be used within a year. When storing the LEDs, moisture proof package with absorbent material (silica gel) is recommended.

2. After opening the package

The LEDs should be kept at temperature lower than 30° C and relative humidity lower than 60%. The LEDs should be soldered within 168 hours (7days) after opening the moisture proof package.

If unused LEDs remain, they should be stored in moisture proof packages, such as sealed containers with moisture proof package within absorbent material (silica gel). It is also recommended to return the unused LEDs to the original moisture proof package and to seal the moisture proof package again.

If the moisture absorbent material (silica gel) vapors or expires the expiration date, baking treatment should be performed by using the following conditions : 60 °C for 20 hours.

The LEDs electrode and leadframe comprise a silver plated copper alloy. The silver surface may be affected by environments. Please avoid conditions which may cause the LEDs to corrode or discolor. The corrosion or discoloration might lower solderability or affect optical characteristics.

Please avoid rapid transition in ambient temperature, especially in high humidity environments where condensation can occur.

Static Electricity:

1. The products are sensitive to static electricity, and care should be taken when handling them.

2. Static electricity or surge voltage will damage the LEDs. It is recommended to wear a anti-electrostatic wristband or anti-electrostatic gloves when handling the LEDs.

3. All devices, equipment and machinery must be properly grounded. It is recommended that measures be taken against surge voltage to the equipment that mounts the LEDs.
