

# 0.5 mm pitch, Next Generation High Speed Board-to-Wire Connectors

## FX16 Series

"V-by-One® HS" is a trade mark of Thine Electronics, Inc.

### Supports next generation high-speed transmission

Fig.1

### V-by-One® HS compatible connector

Fig.2

## ■ Features

### 1. Supports next-generation high speed transmissions

FX16 Series supports next-generation high-speed signals including signal transmission of up to 6Gbps. The FX16 series delivers exceptional impedance-matching, even at sharp signal rise times of  $T_r=50\text{ps}$  (10 - 90%). (Fig.1)

### 2. V-by-One® HS compatible connector

The FX16 Series connector is recommended by Thine Electronics, Inc. for their V-By-One® HS next-generation panel interface, due to the connector's outstanding signal integrity performance at 3.75Gb/s - the top data rate of the interface. As shown in Fig.2 on the right, the eye pattern remains wide open at 3.75Gbps. (Please refer to the transmission property data shown on Page 2.)

### 3. A patented flip-lock harness simplifies FFC applications.

We have incorporated our proprietary patented flip-lock design that greatly simplifies FFC assembly by eliminating the need for costly cable soldering (Fig.3).

### 4. Vertical cable plug

The vertical plug mating style simplifies the assembly process. In addition, it offers a lower profile by limiting the mated height to only 8 mm (Fig.4).

### 5. Multiple variations of plug style, cable type and number of positions available

The series features a common plug for shielded FFC and micro coaxial cable. Available plug variations include right-angle, vertical style for batch harness assembly and direct plugin styles. Multiple position sizes are available (please see page 3 for variations).

[Note]

Right-angle and vertical batch FFC harness assembly is carried out only at our factory. Please contact your local Hirose Sales Representative for details.

### 6. RoHS compliant

All materials and substances used to produce these parts fully comply with RoHS standards.

### Simplified FFC harness assembly with a flip-lock system

Fig.3

### Vertical mating, horizontal wiring

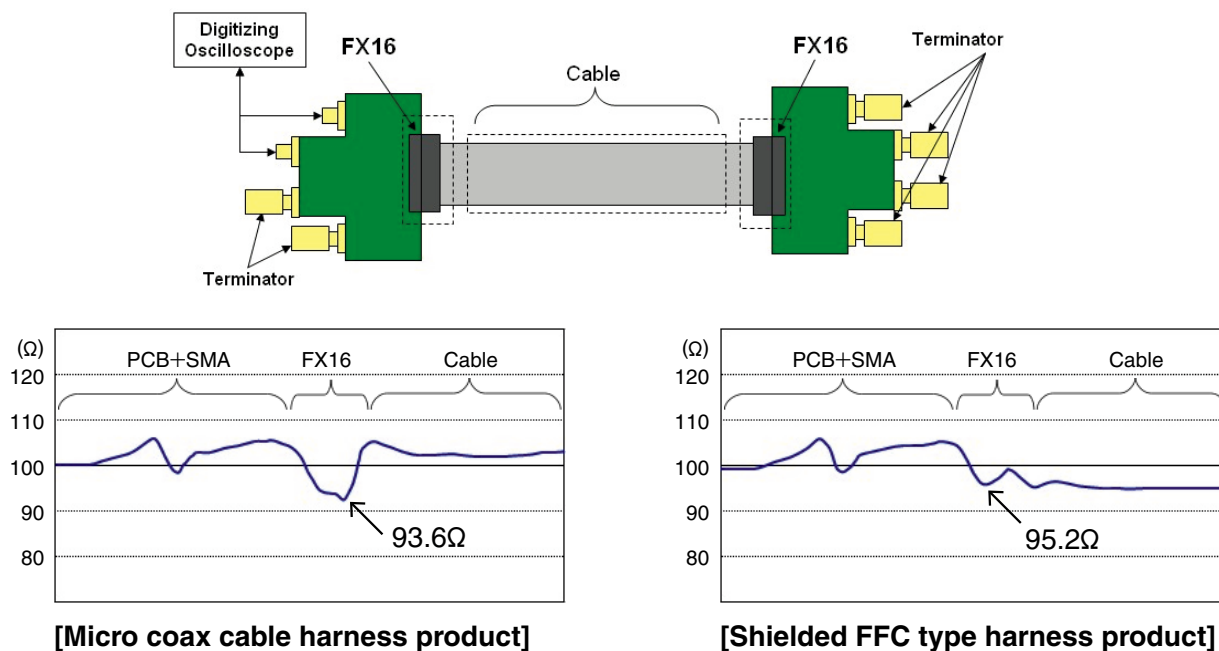

Fig.4

## Transmission properties

### Differential impedance [Rise time: $T_r=100$ ps]

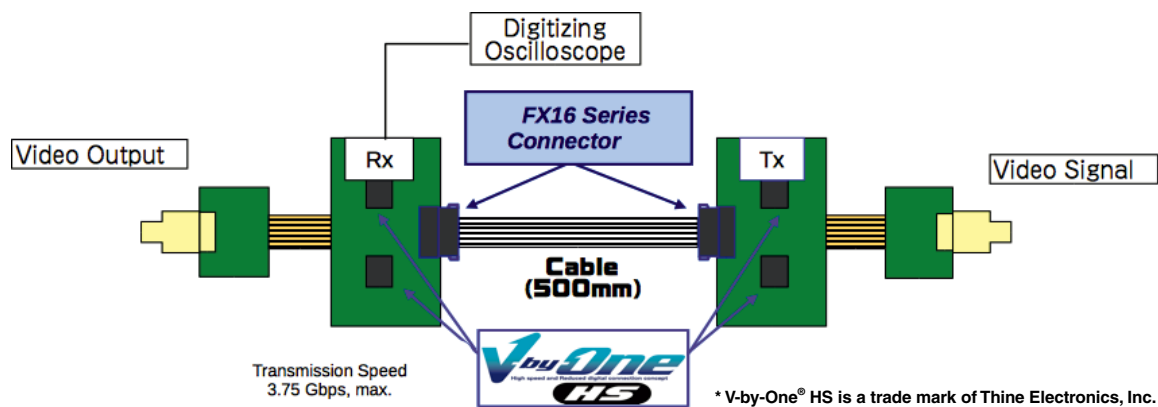

A differential impedance of  $100\ \Omega \pm 10\%$  is maintained at signal rise time of 100 ps. (※Notes), This specification is met by way of an impedance-matching design based on SI simulation.

### Eye diagram

The FX16 Series connector shows outstanding performance at 3.75Gbps, the maximum speed of V-By-One® HS developed by Thine Electronics, Inc.

Testing with actual V-by-One® HS signals shows that the eye pattern is wide open at these signal speeds. (※Notes)

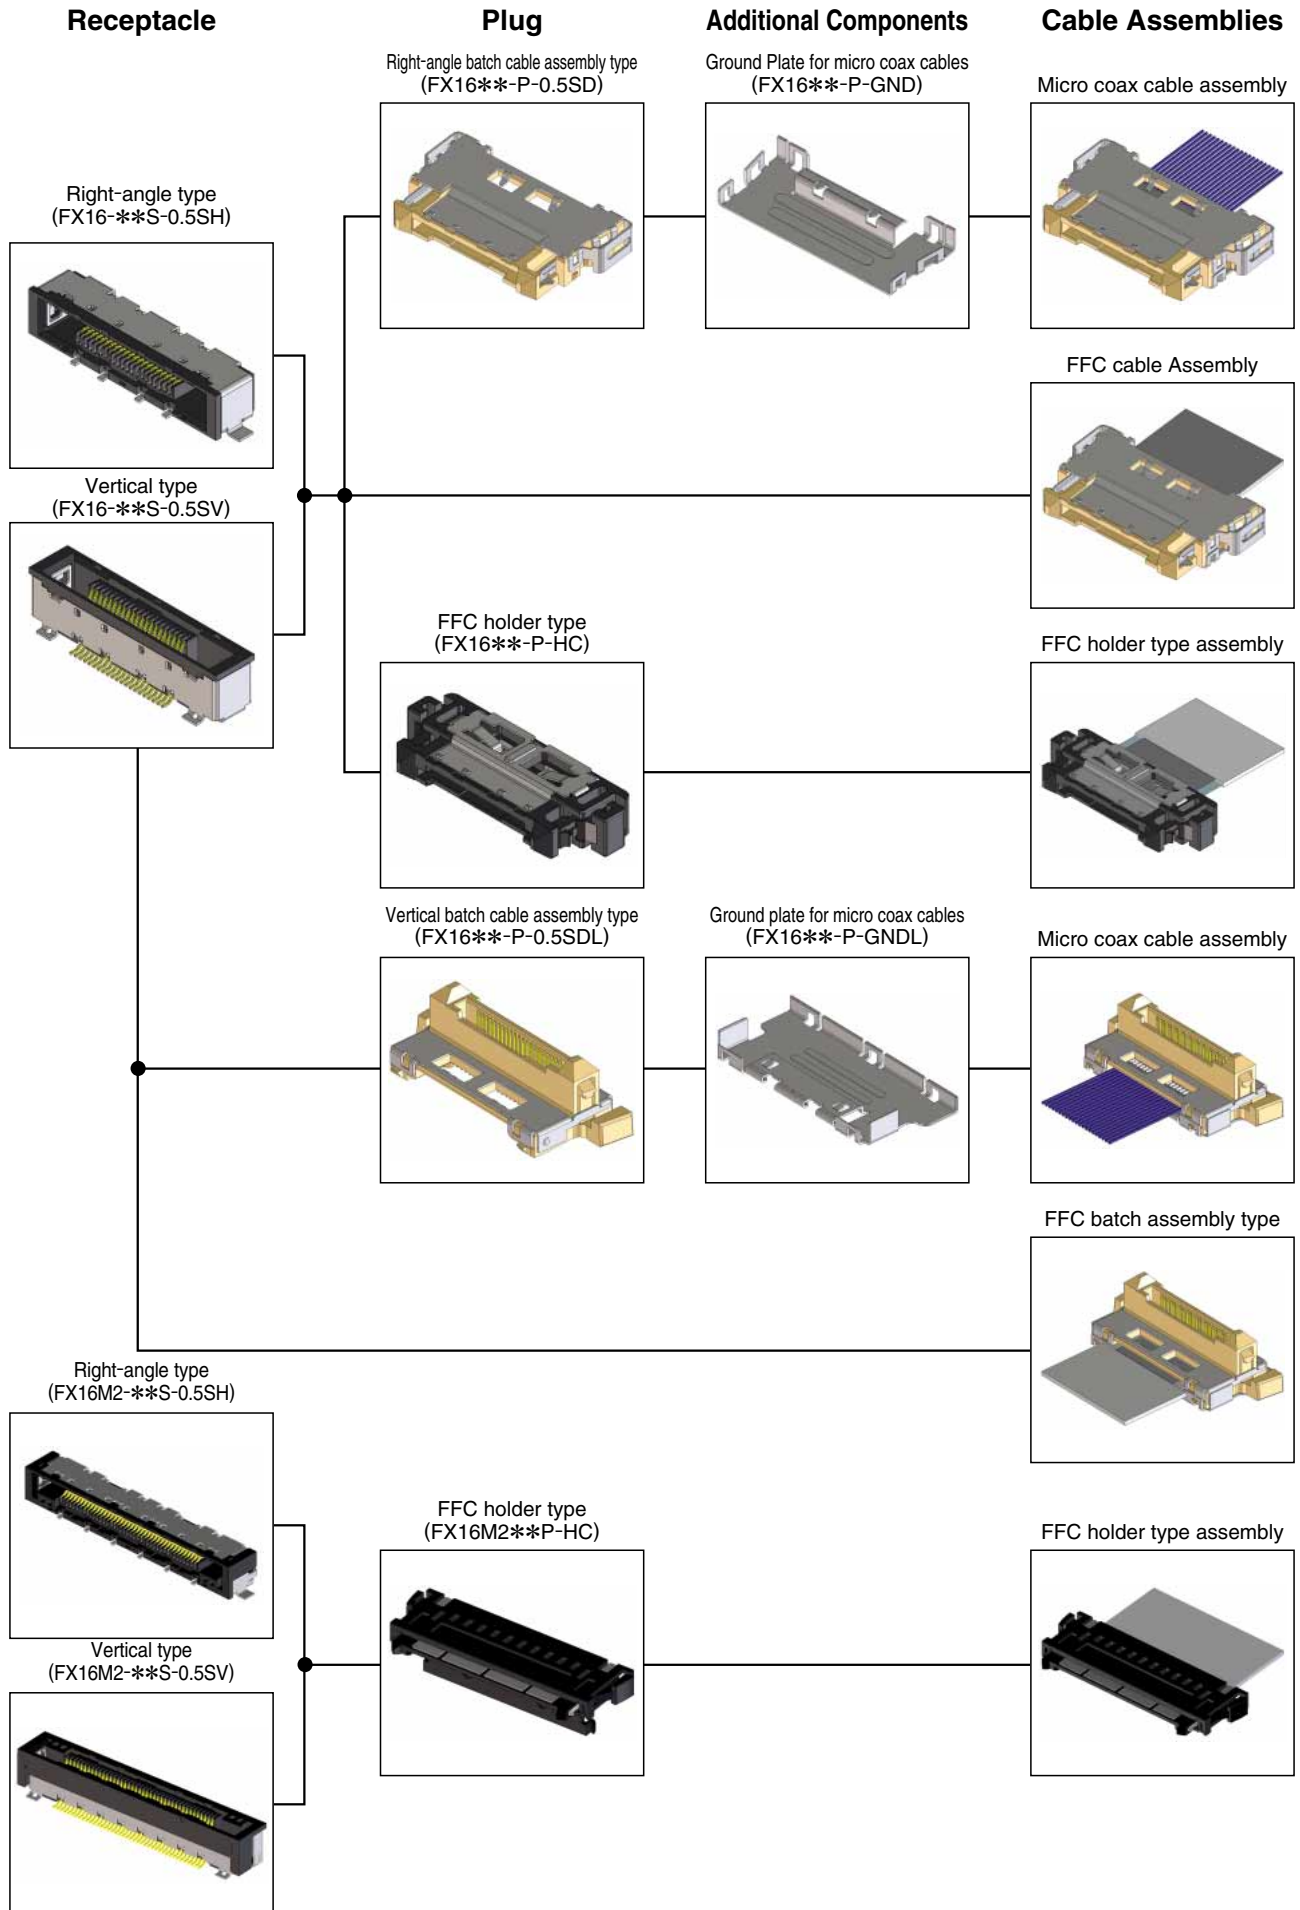

[Micro coax cable harness 500 mm product]

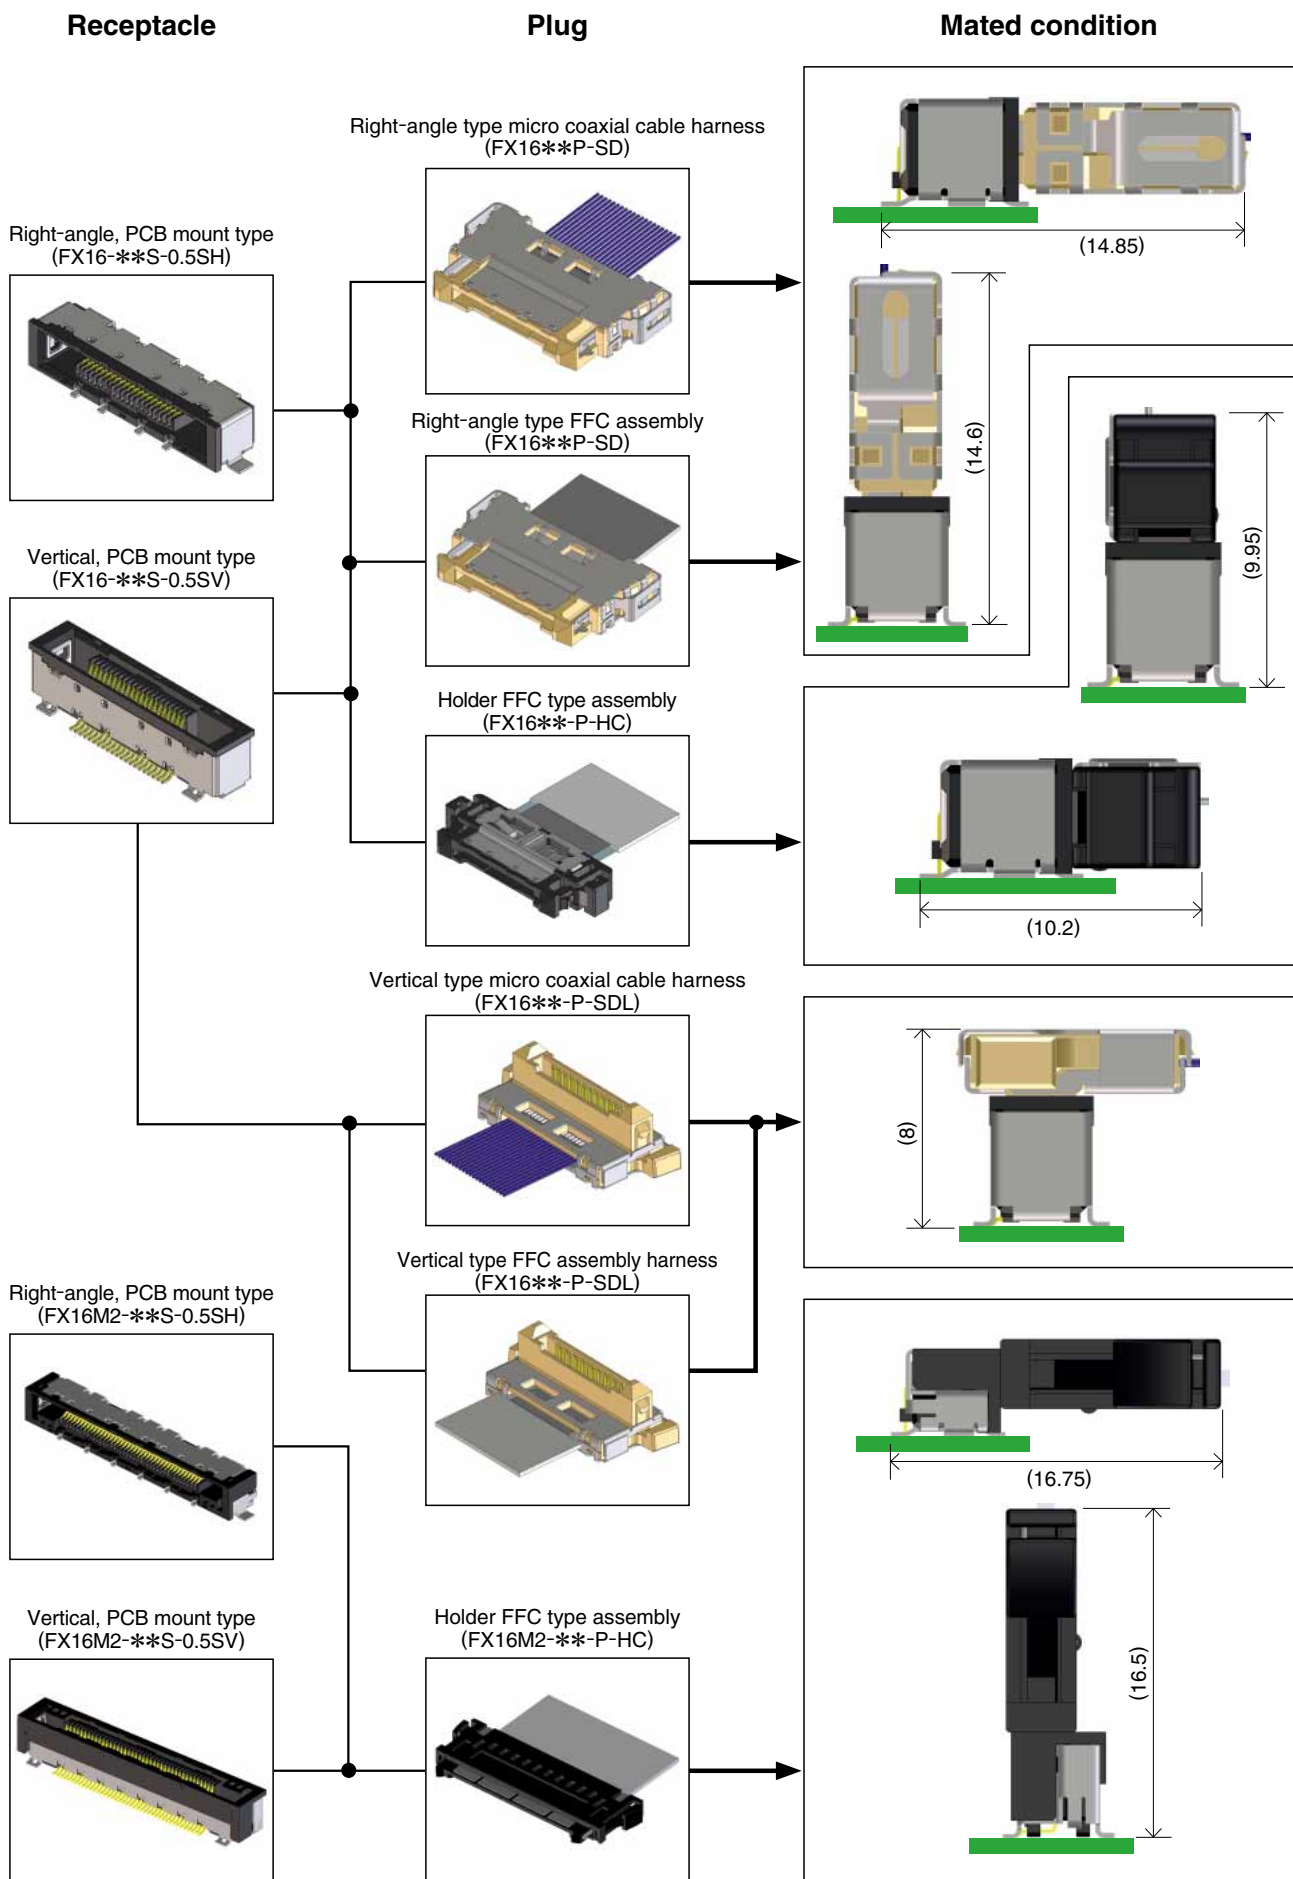

[Shielded FFC type harness 500 mm product]

\*Note) Results may vary depending on the length and properties of the cables used.

## ◆ Diagram of FX16 Series variations and mating table

## FX16 Series mating dimensions (Reference dimensions)

(Unit: mm)

## Connector product specifications

Ratings	Current Rating 0.5A	Voltage Rating AC60V
	Operating Temperature Range: -55 to 80°C (Note 1) (Note 2)	Operating Humidity Range: relative humidity of no more than 85% (Note 2) (Note 4)
	Storage Temperature Range: -10 to 60°C (Note 3)	Operating Humidity Range: relative humidity of no more than 70% (Note 3) (Note 4)

Items	Specifications	Conditions
1.Contact resistance	80 mΩ max (Note 5)	Measured at 1 mA
2.Insulation resistance	500 MΩ minimum	Measured at DC 100 V
3.Withstand voltage	No flashover or breakdown	AC 200 V is applied for one minute
4.Overall push-pull force	Inserting force (0.5 × number of pos.): no more than 1N Extracting force (0.05 × number of pos.): no less than 1N	Measured by using applicable connectors
5.Durability	Contact resistance: variation from the initial state: no more than 20 mΩ	50 mating cycles
6. Vibration	No electrical discontinuity of 1μ or greater	Frequency 10 – 55 Hz, half amplitude 0.75 mm, 2 hours for 3 axial directions
7.Shock	No electrical discontinuity of 1μ or greater	Accelerated velocity: 490 m/s <sup>2</sup> , for 11 ms, half-sine in 3 directions, 3 times for each of the three directions (axes)
8. Humidity resistance	Contact resistance: variation from the initial state: 20 mΩ max Insulation resistance: minimum of 500 MΩ	96 hours at 40°C temperature and the humidity range from 90 to 95%
9. Temperature cycles	Contact resistance: variation from the initial state: 20 mΩ max Insulation resistance: 500 MΩ min	Temperature:-55 → 5 to 35 → 85 → 5 to 35°C 5 cycles of the testing time period of 30 → 5 → 30 → 5 minutes

(Note 1) Includes temperature rise caused by current flow.

(Note 2) The operating temperature range when the operating humidity is above 80% shall be -55 to 40°C.

(Note 3) The term “storage” refers to the long-term storage condition of unused products before PCB mounting.

(Note 4) No condensation allowed.

(Note 5) The conductor resistance of connected cables is not included.

## Connector material

### ●Receptacle

Part	Materials	Finish	Remarks
Insulator	FX16:LCP resin FX16M2:Polyamide resin	Black color	UL94V-0

## FFC batch assembly harness product specification

Ratings	Current Rating 0.3A	Voltage Rating AC60V
	Operating Temperature Range: -20°C to 80°C (Note 1)	Operating Humidity Range: 40% to 80% (Note 3)
	Storage Temperature Range: -10 to 60°C (Note 2)	Storage Humidity Range: 40 % to 70% (Note 3)

Items	Specifications	Conditions
1 Conductivity	Electrical current must be carried	DC 100 mA is applied
2. Insulation resistance	500 MΩ minimum	Measured at DC 100 V
3. Withstand voltage	No flashover or breakdown	AC 200 V is applied for one minute

(Note 1) Temperature rise at the time of electrification is included.

(Note 2) The term “storage” refers to the long-term storage condition of unused products.

(Note 3) No condensation allowed.

## FFC material

Part	Materials	Finish	Remarks
Completely shielded FFC (Note 1)	Please refer to the separate specification document.	Please refer to the separate specification document.	Only required for wire/ FFC products that are manufactured by BANDO DENSEN Co., Ltd.

(Note 1) Batch cable assembly type connectors require the use of a double sided, shielded FFC manufactured by BANDO DENSEN Co., Ltd.

## Connector part number structure for FFC cable assemblies

**FX 16 - 21 P - S A - 500 BD**

① ② ③ ④ ⑤ ⑥ ⑦ ⑧

① Series Name	:FX
② Series No.	:16
③ Number of Contacts	
④ Contact type	P: female contact
⑤ Plug type	S: Double-sided horizontal plug type L: Double-sided vertical plug type
⑥ Wire connection method	A: (Contact No.) 1-n cable B: (Contact No.) 1-1 cable
⑦ Length of cable assembly	
⑧ FFC type	BD: Double-sided shielded, manufactured by BANDO DENSEN Co., Ltd.

## Caution

- Batch cable assembly type connectors require the use of a double sided, shielded FFC manufactured by BANDO DENSEN Co., Ltd.  
Please contact BANDO DENSEN Co., Ltd. for specifications of the material, processing, etc. used for the FFC.
- The minimum length beneath the head of the harness is 70 mm.
- Hirose Electric does not take orders for anything other than straight FFC harnesses. We only provide straight double-sided harness products.
- Please contact our Sales Department for other details.

### ●Vertical type (FX16-\*\*-S-0.5SV)

### ●Vertical type (FX16M2-\*\*-S-0.5SV)

### ◆Recommended PCB layout (Metal mask dimension)

#### Notes:

- 1 The co-planarity of the contact and shell should measure no more than 0.1 (mm).
- 2 Insulation measures such as the pattern prohibited area or resist processing are required in the area identified by  inside the land pattern.
- 3 ( ) is a reference dimension.
- 4 During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches), but this will not affect their performance.
- 5 This product is delivered in an embossed package; the packaged quantity in one reel is 1,000 pieces for standard articles (00) and 100 pieces for the specification of (30).

Unit: mm

Product No.	HRS No.	Number of positions (n)	A	B	C	D	E	F	G	RoHS

## ◆ Emboss carrier dimensions (receptacles only)

### ● Horizontal type (FX16-\*\*\*S-0.5SH / FX16M2-\*\*\*S-0.5SH)

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	D	W
FX16-21S-0.5SH(**)	575-3411-5 **	21	44	40.4	20.2	23.76	44.5
FX16-31S-0.5SH(**)	575-3412-8 **	31				28.76	44.5
FX16M2-41S-0.5SH(**)	575-3003-9 **	41	56	52.4	26.2	33.76	56.5
FX16M2-51S-0.5SH(**)	575-3004-1 **	51				38.76	56.5

(00): Embossed package (1,000 pcs/reel), (30): Embossed package (100 pcs/reel)

Note 1. ( ) shows a reference dimension.

### ● Vertical type (FX16-\*\*\*S-0.5SV / FX16M2-\*\*\*S-0.5SV)

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	D	E	W
FX16-21S-0.5SV(**)	575-3401-1 **	21	44	40.4	20.2	20.57	6.9	44.5
FX16-31S-0.5SV(**)	575-3402-4 **	31				25.57		
FX16M2-41S-0.5SV(**)	575-3002-6 **	41				30.57	7	

(00): Embossed package (1,000 pcs/reel), (30): Embossed package (100 pcs/reel)

Note 1. ( ) shows a reference dimension.

## ◆ Recommended Temperature Profile

This temperature profile is a reference based on the following conditions. Since your actual conditions may vary, please check your process before mounting the connectors.

### (Applicable Conditions)

Test PCB Dimensions : 40×30×1(mm)  
 Reflow method Material : glass epoxy  
 Solder Composition : Sn-3 Ag-0.5 Cu  
 (flux component: 10.5 wt%)  
 Metal mask thickness : 0.12mm

(Note 1) This temperature profile is a recommended value.

(Note 2) The reflow process should not be conducted more than two times.

(Note 3) The values may show a slight variance due to solder paste type and thickness.

## ◆ Cleaning Conditions

### Cleaning with organic solvents

Solvent	Clean at normal temperature	Heated cleaning
IPA (Isopropyl alcohol)	○	○

### Water cleaning

If wet cleaning is necessary, please select the proper cleaning agent (terpene, alkali saponification agent etc.) based on the reaction it will have on the metals and resins of the connector. This information is issued by the manufacturer of the cleaning agent. Additionally, please make sure not to apply an excessive amount of the cleaning agent.

### Points to note during cleaning

When using organic solvents or wet cleaning agents, please ensure proper rinsing is done to eliminate the possibility of deterioration in electrical performance caused by flux or cleaning agents remaining in the connector.

## ■ Plug

### ● Right-angle batch cable assembly type

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	D	RoHS
FX16-21P-0.5SD	575-3301-7	21	21.9	19.6	17.57	10	○
FX16-31P-0.5SD	575-3302-0	31	26.9	24.6	22.57	15	

Notes:

1. ( ) shows a reference dimension.
2. During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches) or black spots in the resin, but these small imperfections will not affect their performance.
3. This product is delivered in a tray package.

### ● Right-angle-type cover shell for micro axial cables

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	RoHS
FX16-21P-GND	575-3311-0	21	19.2	13.2	20.06	○
FX16-31P-GND	575-3312-3	31	24.2	18.2	25.06	

Notes:

1. During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches), but this will not affect their performance.
2. This product is delivered packaged on a 2500 piece reel.
3. This product is an accessory to the separately sold item "Right angle batch cable connection type plug (FX16-\*\*-0.5SD)". Please be sure to use them together.

### ●Vertical batch cable connection type

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	D	E	F	RoHS
FX16-21P-0.5SDL	575-3321-4	21	18.07	13.7	11.5	10	23.6	17.57	○
FX16-31P-0.5SDL	575-3322-7	31	23.07	18.7	16.5	15	28.6	22.57	

Notes:

1. ( ) shows a reference dimension.
2. During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches) or black spots in the resin, but these small imperfections will not affect their performance.
3. This product is delivered in a tray package.

### ●Vertical type cover shell for micro coaxial cables

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	RoHS
FX16-21P-GNDL	575-3331-8	21	20.37	11.47	18.17	○
FX16-31P-GNDL	575-3332-0	31	25.37	16.47	23.17	

Notes:

1. During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches), but this will not affect their performance.
2. This product is delivered packaged on a 2000 piece reel.
3. This product is a complement to the separately sold item "vertical batch cable assembly type plug (FX16-\*\*\*P-0.5SDL)". Please be sure to use them together.

## ◆ Applicable wires

### ● Micro coaxial cables

Applicable conductor size (core structure)	Insulation diameter
AWG #36 (7 pieces/0.05 mm)	$\phi 0.3 \sim \phi 0.5 \text{ mm}$
AWG #38 (7 pieces/0.04 mm)	
AWG #40 (7 pieces/0.03 mm)	

Number of positions (n)	Applicable connectors	A	B	C
21	FX16-21P-0.5SD	13.1	10	4.55
	FX16-21P-0.5SDL			4.3
31	FX16-31P-0.5SD	18.1	15	4.55
	FX16-31P-0.5SDL			4.3

### Recommended micro coaxial cable dimensions

#### Notes:

- 1 ( ) shows a reference dimension.
- 2 Pulse heat batch soldering is recommended to affix the harness to the connector
- ③ To prevent any conductor deformation prior to harnessing, please use the cable material immediately after cutting
- ④ After confirming that the soldered state has no problems, departure from recommended values is permissible
- ⑤ Use of out-of-spec dimension cables may hinder the correct attachment to the connector. Additionally, use of excessive force during cable connection may cause faults such as unsoldered areas and disconnects.
- ⑥ The protrusion of the external conductor from the metal bar should be minimized.
- ⑦ Apply a solder coat (pre-tinning) on the internal conductor.
- ⑧ Shows the position at which the connector should be connected and the cable inserted into the connector when the cable has been stripped at the recommended length.  
If cable is stripped at a different length, the amount of cable insertion will need to be changed as well.

## ●FFC holder type (FX16F-\*\*P-HC)

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	C	RoHS
FX16F-21P-HC	575-3265-5	21	22.4	17.57	20.4	○
FX16F-31P-HC	575-3266-8	31	27.4	22.57	25.4	

## Notes:

- ( ) shows a reference dimension.
- During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches). But this will not affect their performance. Additionally there may be mold sinks present.
- This product is delivered in a tray package.

## ●FFC holder type (FX16M2-\*\*P-HC)

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	RoHS
FX16M2-41P-HC	575-3262-7	41	35.4	27.57	○
FX16M2-51P-HC	575-3263-0	51	40.4	32.57	

## Notes:

- ( ) shows a reference dimension.
- During the manufacturing process, products may incur some minor cosmetic damage (dents/scratches), but this will not affect their performance. Additionally there may be mold sinks present.
- This product is delivered in a tray package.

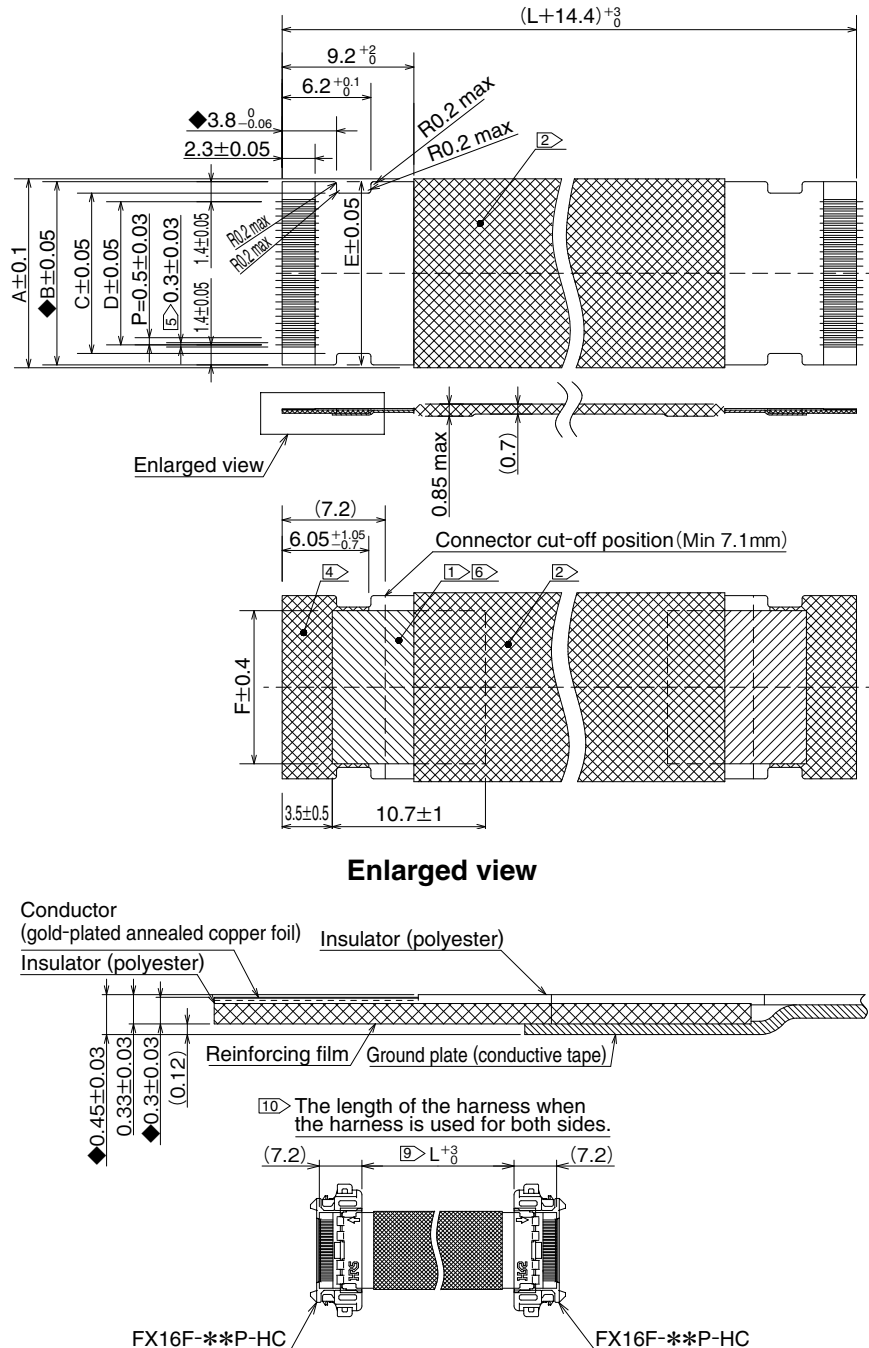

## ◆ Applicable wires

### ● Completely shielded FFC for holder type

Unit: mm

Number of positions (n)	Applicable connectors	A	B	C	D	E	F
21	FX16F-21P-HC	13.2	12.8	11.2	10	12.8	10.7
31	FX16F-31P-HC	18.2	17.8	16.2	15	17.8	15.7

### Recommended FFC dimensions

#### Notes:

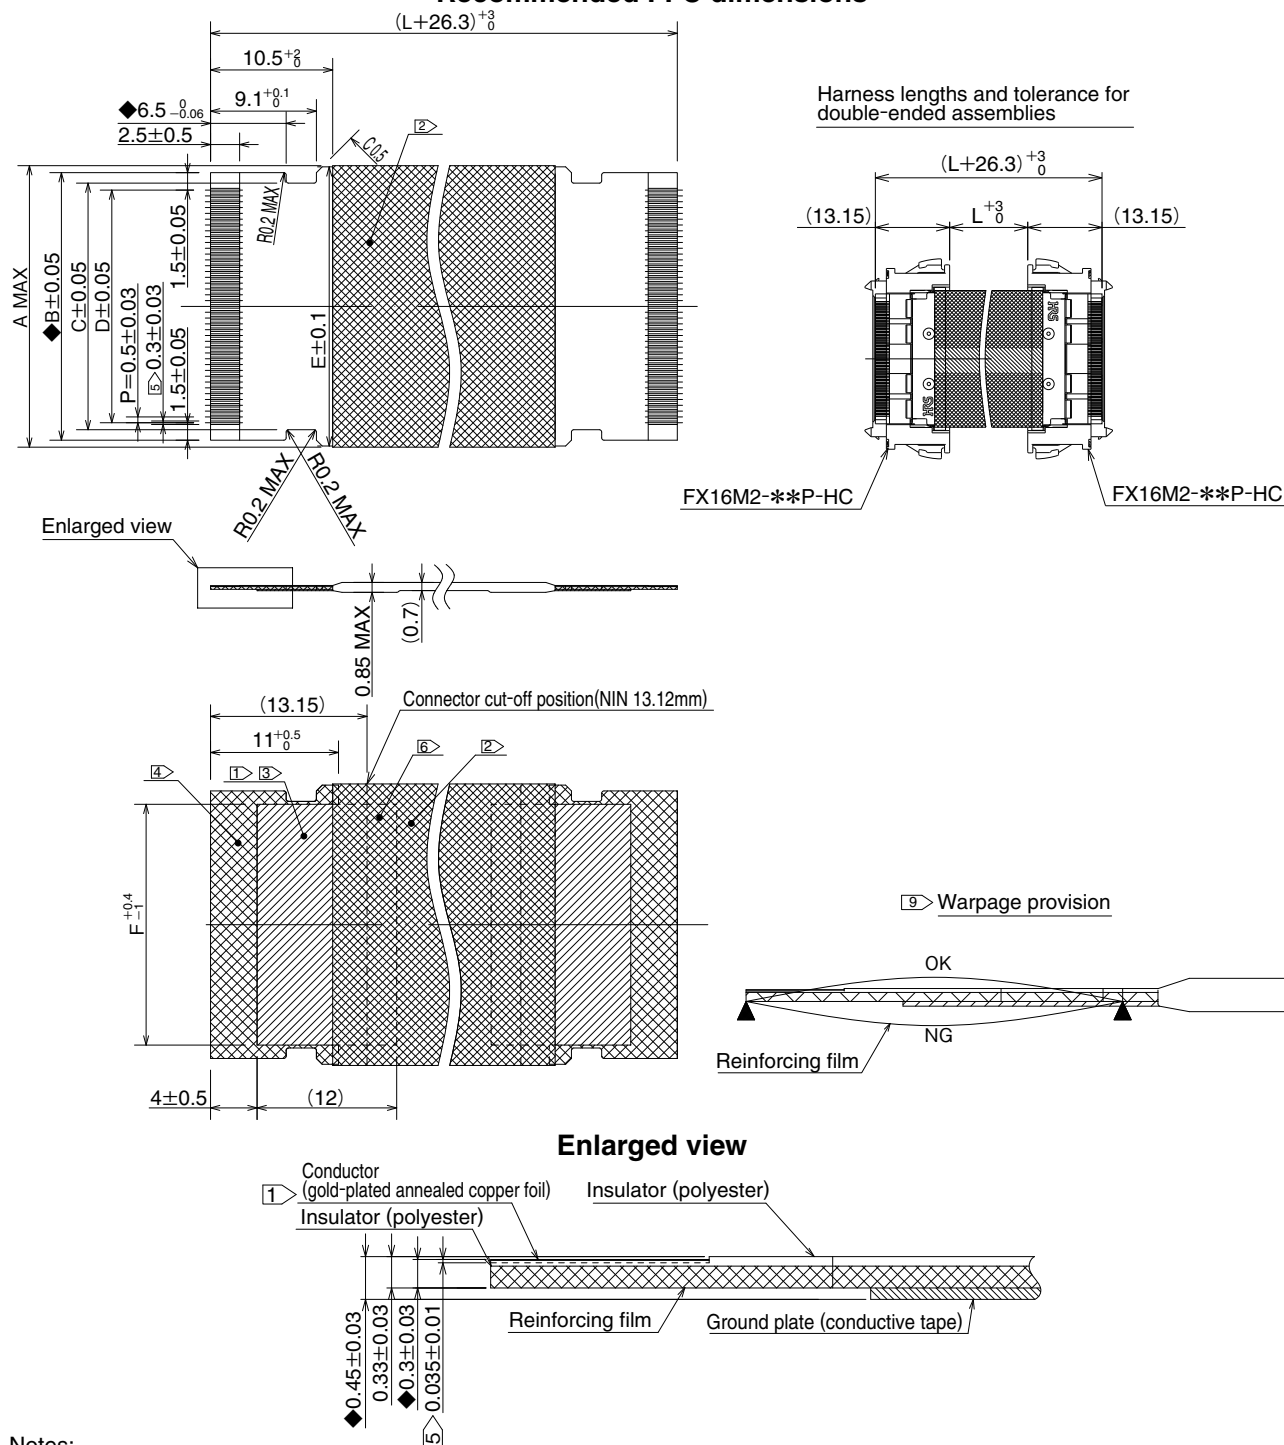

- ① The plating on the ground plate (tape) must be at least  $1.5 \mu\text{m}$  of Sn plating, with the first 1 to  $5 \mu\text{m}$  of Ni plating + at least  $0.2 \mu\text{m}$  of Au plating on the pad surface as well as C-2000-equivalent sealing.
- ② denotes the shielded area. (both sides are shielded).
- ③ denotes the area for the ground plate (conductive tape).
- ④ denotes the area for the reinforcing film.
- ⑤ The width of the conductor must be  $0.3 \pm 0.03$  mm.
- ⑥ The ground plate (tape) and shield must overlap each other. This will allow a conductive path to be established through both ground plates and on both sides.
- ⑦ FFC must be made to satisfy the differential impedance value of  $100 \Omega \pm 7\%$ .
- ⑧ ( ) denotes the reference dimension and ◆ mark denotes important dimensions.
- ⑨ The L dimension is the length of the harness from one end face to the other end face of the connector cable port.

## ● Completely shielded FFC for holder type

Unit: mm

Number of positions (n)	Applicable connectors	A	B	C	D	E	F
41	FX16M2-41P-HC	24.4	23	21.2	20	23.5	20.7
51	FX16M2-51P-HC	29.4	28	26.2	25	28.5	25.7

## Recommended FFC dimensions

## Notes:

- ① The plating on the grounding plate (tape) must be at least  $1.5 \mu\text{m}$  of Sn plating, with the first 1 to  $5 \mu\text{m}$  of Ni plating + at least  $0.2 \mu\text{m}$  of Au plating on the pad surface as well as C-2000-equivalent sealing.
- ② denotes the shielded area. (both sides are shielded).
- ③ denotes the area for the ground plate (conductive tape).
- ④ denotes the area for the reinforcing film.
- ⑤ The width of the conductor must be  $0.3 \pm 0.03 \text{ mm}$ .
- ⑥ The ground plate (tape) and shield must overlap each other. This will allow a conductive path to be established through both ground plates and on both sides.
- 7 The manufacturing work should be directed to ensure that the FFC is made to satisfy a differential impedance value of  $100 \Omega \pm 7\%$ .
- 8 ( ) denotes the reference dimension and  $\blacklozenge$  mark denotes important dimensions.
- ⑨ Warpage of the reinforcing film is permitted only in the direction of OK in reference to  $\blacktriangle\blacktriangle$  on both sides. However, please make sure that the film can still be inserted into the connector without any problems.

## ◆FFC harness

### ●Double-ended horizontal plug type

Unit: mm

Part No.	HRS No.	Number of positions (n)	A	B	RoHS
FX16-21P-SA-**BD	_____	21	21.9	19.6	○
FX16-21P-SB-**BD	_____				
FX16-31P-SA-**BD	_____	31	26.9	24.6	
FX16-31P-SB-**BD	_____				

\*\* is the length beneath the head of the FFC harness (L)

### ●1-n cable connection type (FX16-P-SA-\*\*BD)

### ●1-1 cable connection type (FX16-P-SB-\*\*BD)

#### Notes:

- ( ) shows a reference dimension.
- The completely shielded FFC can be obtained from BANDO DENSEN Co., Ltd. Please contact BANDO DENSEN Co., Ltd. for specifications of the material, processing, etc., used for the FFC
- The minimum length beneath the head of the FFC harness (L) is 70 mm.
- Hirose Electric does not take orders for anything other than straight FFC harnesses. We only provide straight double-sided harness products.
- Please contact our Sales Department for other details.

## FFC harness

## Precautions of use

### ◆Plug (Vertical/horizontal batch cable connection type)

#### [Precautions for soldering]

##### [1] Recommended soldering iron

Wire solder with flux (lead-free type: Sn-3Au-0.5Cu)

When using micro coax cables..... $\phi 0.15$  Length: number of pos.  $\times 0.5$  mm

Be careful not use an excessive amount of flux, especially when using a wire solder that contains flux. Doing so may cause the flux to run up to the contact portion which can lead to contact failure.

##### [2] Prior to fixing the cables to the connector, make sure that the conductor is placed correctly in the center of the contact.

Fix the cable at the metal bar guide on the connector.

##### [3] Before you solder down the cables onto the connector, please check for the following issues:

- Deformation of the conductor
- Pitch deviations to the conductor relative to the contact
- Extreme uplift of the conductor tip end

This feature can lead to unsoldered spaces or solder bridges.

Deformation of the conductor

Pitch deviation

Uplift

##### [4] Recommended pulse heat conditions

Conditions will vary depending on the length/type of cable used, type of solder, etc...

Please reference the recommended profile conditions when setting up your working conditions.

Pressure on the iron tip	13-17N
--------------------------	--------

Main heating	
Temperature (Y)	$275 \pm 5^\circ\text{C}$
Hold time (X)	$2 \pm 0.5$ seconds

##### [5] Please check the soldered part after soldering to ensure no deformities were made. The illustrations below depict some examples of correct parts and some examples of incorrectly soldered parts.

Example of a correctly soldered part

The conductor is located at the center of the contact, and the whole area is uniformly soldered.

Examples of incorrectly soldered parts

Solder bridge

Insufficient amount of solder used

Scattered solder balls

Floating

Uplift of the conductor

The conductor is located too close to the extended contact.

## Precautions of use

### [Precautions for resin sealing]

- [1] To prevent insulation failure due to foreign materials, cable disconnection during the routing of the cable and other failures, we recommend that the soldered area be protected with an ultraviolet curable resin or another equivalent material. Recommended resin sealing material: Ultraviolet curable resin 3033 manufactured by ThreeBond Co., Ltd.
- [2] Please refer to the resin manufacturer's directions for recommended usage conditions.
- [3] Ensure that the complete soldering area of the conductor is covered with resin. Be careful not to let the applied resin flow into or stick to the connector contacts.

- [4] Please pay close attention to the load (e.g. tension, stress.) placed on the soldered part after soldering. Poor handling could cause cable disconnection.

### [How to mount the cover shell]

- [1] After connecting the cables, mount the separately sold cover shell (for micro coax cables: FX16-31P-GND).
- [2] Place the cover shell over the connector from above, set it on the connector while holding it with your fingers.

- [3] After applying it to the connector, check to see if all six "joining point" locations are correctly in place.

### Illustration showing proper joining

(cross-section of the joining point).

The cover shell is locked into place and is seated correctly.

The cover shell is not locked and is still incomplete.

## Precautions of use

### [Ground soldering of the connector to the cable]

- [1] Soldering the metal bar of the cable and the connector shell will enhance the shielding properties and provide additional cable strain relief.

- [2] Do not apply too much solder as this can lead to deformation/melting of the cable/connector due to the heat generated while soldering.

### ◆Plug (FFC holder type)

#### [Precautions during harness work]

- [1] Inserting FFC

Insert the FFC straight along the guide rib of the mold, as shown in the following figure.

It cannot be inserted in different directions.

Please be careful not to deform FFC or damage the case or spring contact.

- [2] Confirming the insertion of the FFC

Check if the FFC has been inserted correctly by observing the tip end of the FFC from above the connector.

\* If the FFC was inserted correctly, the tip of the FFC will meet up with the wall of the connector.

## Precautions of use

### [3] Fixing the FFC

As shown in the figure below, hold the connector in both hands and push the lock straight with both thumbs. At this time, verify the hooks are tightly attached to each other on both sides.

Additionally, after closing the lock, verify that the FFC cannot be easily pulled out, and that the hooks on both sides are tightly attached to each other by holding both ends of the assembly and pulling the FFC in the drawing direction with a force of 3 to 5 N

### [4] Other cautions

- ① From the time of opening the package until the assembly process, please do not handle the product in the manner which will cause the lock of the connector to be pushed down. If the lock gets deflected in the direction shown in the figure below, discard the connector.

- ② Once FFC has been removed from the connector, do not reuse the connector.
- ③ At the time of packing the harness, be careful not to let the connector be damaged or deformed.

## Precautions of use

### ◆General cautions

#### [Cautions for handling]

##### [1] Insertion into the connector on the side of PCB

The mating direction of this connector has been specified. Mating should be done with the mark facing the direction shown in the figure below.

Additionally, insertion should be done until the locks on both sides are set.

Although this connector is designed to prevent reverse insertion, the connector could be damaged if it were mated forcibly with a force exceeding 25 N. Avoid forced mating, and please verify the triangle mark position before mating.

Do not pull it out at an angle as shown in the figure below. This could damage the connector.

##### [2] Unmating the connector mounted on a PCB

This connector is structured to lock on both ends when mated.

When unmating the connector, pull it out straight while pushing on both sides with your fingers to unlock it.

Please do not pull out FFC with a strong force.

Do not pull it out at an angle as shown in the figure below. This could damage the connector.

#### 〈Incorrect insertion method〉

## Precautions of use

## 〈Incorrect pull-out method〉

[3] In the case when the connector has been unmated forcibly.

If the connector has been unmated forcibly, push it back once to the completely mated condition, from this state, pull the plug by the "correct pull-out method".

Be sure to push it once to the completely mated condition.

[4] In the case when you have pulled it out with one side locked

If the plug has been pulled out with one side locked, the locked part could be damaged if you pull it out forcibly.

In such a situation, do not try to unlock it forcibly, but mate the plug again as it is, and pull out the plug by the "correct pull-out method" again with both sides locked.

If the plug has been pulled out with one side locked, be sure to mate them again.

[5] Handling after mating

After mating, be careful not to apply load to the connector during cable routing.

The connector could be damaged if you pull the cable with a force of 20 N or more. Additionally, it could cause cable disconnection.

Please make sure that you do not pull the cable forcibly.

Repeated strain could also cause cable disconnection.

Avoid any use which involves repeated strain.

Repeated tension

When you use a cable that is folded back from the connector base, please maintain a large bend radius or keep the folding position away from the connector base in order to minimize the load on the connector.

Using the cable in a folded state.
