High Brightness SMT Round LED Lamps
Amber, Red, Green and Blue Tinted LEDs

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

Description

The new Avago ALMD-xx3D LED series has the same or just slightly less luminous intensity than conventional high brightness, through-hole LEDs.

The new LED lamps can be assembled using common SMT assembly processes and are compatible with industrial reflow soldering processes.

The LEDs are made with an advanced optical grade epoxy for superior performance in outdoor sign applications.

For easy pick and place assembly, the LEDs are shipped in EIA-compliant tape and reel. Every reel is shipped from a single intensity and color bin—except the red color—for better uniformity.

Notes:

1. The luminous intensity is measured on the mechanical axis of the lamp package and it is tested with pulsing condition.
2. The optical axis is closely aligned with the package mechanical axis.
3. Dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the color of the lamp.
4. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is half the on-axis intensity.
5. Tolerance for each bin limit is $\pm 15\%$

Moisture Sensitivity and Handling

The ALMD-xx3D series oval package has a Moisture Sensitive Level 2a rating per JEDEC J-STD-020. Refer to Avago Application Note AN5305, Handling of Moisture Sensitive Surface Mount Devices, for additional details and a review of proper handling procedures.

A. Storage before use

- An unopened moisture barrier bag (MBB) can be stored at < 40° C/90% RH for 12 months. If the actual shelf life has exceeded 12 months and the humidity indicator card (HIC) indicates that baking is not required then it is safe to reflow solder the LEDs per the original MSL rating.
- It is recommended that the MBB not be opened prior to assembly (e.g. for IQC).

B. Control after opening the MBB

- The humidity indicator card (HIC) shall be read immediately upon opening of the MBB.
- The LEDs must be kept at < 30° C/60% RH at all times, and all high temperature related processes including soldering, curing or rework need to be completed within 672 hours.

C. Control for unfinished tape and reel parts

- Unused LEDs must be stored in a sealed MBB with a desiccant or desiccator at < 5% RH.

D. Control of assembled boards

- If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB needs to be stored in a sealed MBB with desiccant or desiccator at < 5% RH to ensure that all LEDs have not exceeded their floor life of 672 hours

E. Baking is required if:

- The HIC indicator is not BROWN at 10% and is AZURE at 5%
- The LEDs are exposed to a condition of > 30° C/60% RH at any time.
- The LED floor life exceeded 672 hours.

The recommended baking condition is: 60 ± 5° C for 20 hours.
